FESTINA LENTE.—It is true enough, however, as you will find by painful experience, if you play in no metropolis, that a player is considered legally "justified in taking what time he thinks proper to a move. The ingrown examples of the way in which this licence may be abused by the unscrupulous that we have lately, or night to light will. It is to be hoped, lead to some remedy. Already, indeed we see a tendency to check this nuisance. The committee of French players appointed to carry on the match by telegraph suggest that, over ordinary moves, two minutes shall be the limit of time allowed, and that non-even less most critical, shall occupy more than twenty minutes

H—You will find Bodex's "Popular Introduction to Chess" a useful and pleasing little treatise to begin with

M. Jun—As long as your adversary's King has a square to move to without going into check, it is not stalemated. See the note in Horn's "Chess-player's Handbook."

R R, of Ashford—Correspondents sending problems for publication should accompany them with their names and addresses: we have not room at present to report in detail upon every communication which reaches us

EAVILIUS—The bystander was a noodle. Who, before, ever heard of a player escaping from checkmate by taking one of his own men?

IDALIUS, FIELDING—A pawn arriving on his 8th square may be exchanged for a Queen, although the player have already a Queen on the board

FIELDING—The delay in carrying on the match by telegraph is not owing to the players, but to the arrangements of the Telegraphic Company not being quite perfected

W S—I. You can castle your King after he has been in check. 2. You cannot castle your King to get out of check

CRAB—The communications you allude to are not forgotten; but we are too much pressed just now to do more than mention them

PRESIDENT—Problem No 410 may, as we said, be solved in four moves. Mr Deacon's own solution is incorrect

JUVENIS—We cannot venture to say, as the position has never been thoroughly analysed.

P to K B'th 4th is the move we have usually seen played.

MONS—We believe it cannot 1 T and S—You can

SOLUTION OF PROBLEM No 413 by C C of Pembleton, G G P, J M of Sherborne, Mons

SOLUTION OF PROBLEM No 411 by Jacob, E M P, L, S D, Mitcham, Rev T W F, M, Omega, Mons, R R of Ashford, Derwood, Jack of Shrewsbury, St Edmund

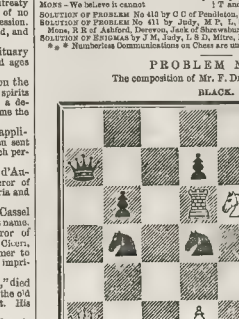
SOLUTION OF ENIGMAS by J M, Judy, L S D, Mitre, Miles, J, Rev H S are correct

* * Numberless Communications on Chess are unavoidably held over until next week.

PROBLEM No. 412.

The composition of Mr. F. DEACON, of Bruges.

BLACK.



WHITE.

White playing first, mates in five moves.

GAMES IN THE MATCH TOURNAMENT.

GAME NO. I IN THE MATCH BETWEEN MESSRS. DEACON AND LOWE

(Sicilian Opening.)

WHITE (Mr. L.)	BLACK (Mr. D.)	WHITE (Mr. L.)	BLACK (Mr. D.)
1. P to K 4th	P to Q B 4th	15. Q Kt to K 4th	P to Q 4th
2. Kt to Q B 3d	P to K 3d	17. P takes Q P	R takes P
3. P to Q B 4th	Kt to Q B 3d	18. Q to Q B 3d	Kt to Q 6th (ch)
4. Kt to Q B 3d	P to K Kt 3d		(e)
5. P to Q 3d	P to Q R 3d (a)	19. B takes Kt	Q takes B (ch)
6. K B to K 2d	K B to K Kt 2d	20. K to Q Kt sq	K to Q Kt sq
7. Q B to K Kt 5th	K Kt to K 2d	21. B to Q B 4th	Kt to Q Kt 5th
8. P to K 4th (b)	P to K R 3d	22. Q to K 3d	R takes B (ch)
9. B to K B 4th	P to Q R 3d	23. R takes R	B takes Kt (ch)
10. P to K 5th (c)	Q to Q B 2d	24. B to Q 3d	Kt takes B
11. Q to Q 3d	B to Q Kt 2d	25. R takes Kt	R to Q sq
12. Castles on Q's side	Q Kt takes Q P	26. Kt to K sq	Q to K 4th
13. P to Q 4th	P takes Q P	27. K to Q R sq	R takes R
14. Q takes Q P	K Kt to Q B 3d	28. Kt takes R	B takes Kt
15. Q to Q 2d	Castles on Q's side	Mr. Lowe resigns.	

(a) Intending, if White played the P to K R 4th, to play B to Q Kt 2d, and then Q R to Q B sq, if the White Kt was placed at Q Kt 5th.

(b) This is too precipitate; he should have waited until his adversary castled, before declaring in which direction he intended to attack his King's Pawn.

(c) Here again White advances his Pawn prematurely. How could he ever expect, situated as he is after Pawns are, to maintain this one?

(d) Young as Mr Deacon is in years and Chess, he outplays the old stager completely at every point, and when he chooses he has acquired more readiness of combination he will certainly be entitled to rank among the best players of the day. At present, it must be admitted that the sedum of his play is quite insufficient, and although with him this arises from habit only, and not as with some others, from a design to exhaust and irritate an opponent, the sooner he corrects to grave a fault the better.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—I cordially approve of the limitation you propose in the time a player should be allowed to deliberate on a move, and also of some restriction to the length of a sitting; but, as an ardent well-wisher to Mr. Staunton, I do earnestly hope, now that he has concluded the Tournament matches, in which, from what many deem a mistaken sense of duty, he felt himself constrained to play at all hours, that he will not suffer himself to be provoked into further contests with a set of mediocre assailants, who merely wish to take advantage of his impaired strength to obtain a little fictitious reputation by associating their names with his. Let him be well assured, when restored his health will have recruited his health, we shall hear no more of these second-rate vaunters than we did during the whole seven years that he stood opposed to all comers. There is not a player of any note in Europe, I write" and " bridegroom" are not always used in the German use of the words, to an affianced pair) the son of the Archduke Rainer, who does not consider the terms "a match" and "a tournament" as synonymous, although with him this arises from habit only, and not as with some others, from a design to exhaust and irritate an opponent, the sooner he corrects to grave a fault the better.

Permit me, with many thanks for the delight and instruction your paper affords me, to subscribe myself, Yours, obediently,

Rue Richelieu, Paris, Dec. 5, 1851. VIRUX SOLDAT.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—Will you permit me, as a subscriber to the Chess Tournament, to address an inquiry to the honourable committee, to whom we are indebted for the management of that assemblage of celebrated players ?

Upon the first appearance of the "Prospectus" the natural question arose, "Are the contests to be all upon even terms; is the inferior player to be obliged to compete with an opponent of acknowledged superiority?" The reply was in the affirmative, and the reasons adduced were accepted as satisfactory. I have carefully watched the report of the matches, and observed that in every case, except in that to which you have recently drawn attention by your just criticism, the 5th "Fabian Lucher" of one of the combatants, the victory has invariably, as common sense dictated, been adjudged to him who won the majority of games. In the latter matches, for example, Mr. Williams won seven games to Mr. Birch's three, and he was named the victor; Mr. Buckle won four games to Mr. Löwenthal's three, and was declared the victor; Mr. Löwenthal gained seven games to Mr. Williams's five, and claimed the victory; Mr. Deacon won seven games to Mr. Lowe's two, and was allowed to be the victor. What I wish to learn, then, is, how, with all these precedents before us, Mr. Williams, in the match just over, *after having been defeated on a majority of games*, has been declared the victor by *Mr. Löwenthal, is permitted to claim for himself a victory?* This surely cannot be with the consent or even cognizance of the committee. It seems to be well understood, that, when the match was appointed between these two players, Mr. Williams was most anxious to escape the conflict. This was natural; and it was equally natural that Mr. Staunton, to prevent a slippery opponent evading him, should offer some advantages to tempt his opponent to enter the lists. I will always, with my whole heart, say, Staunton was justified, under the circumstances, in offering his adversary the prize if he won a lesser number of games than those specified by the rules of the Tourney; but I have no hesitation in asserting, that any utterly unwarranted be making any concession which could have the effect of depriving me and other subscribers of the due number of games. When Mr. Lowe placed his opponent's excessive slowness of play, as a reason for his declining to continue the match, he was met by a peremptory intimation that the full number of games must be played, or the committee had no power to award a prize. Now, surely, even-handed justice demands that the same course should be pursued in the present case. As far as the match has proceeded, Mr. Staunton is the winner; but it has yet to be played out, and, although he has chosen to waive his claim to the prize, the committee can take no cognizance of any private arrangement, but are bound in honour and fairness to see the contest concluded. Yours obediently,

A SUBSCRIBER TO THE TOURNAMENT.

MUSIC.

SACRED HARMONIC SOCIETY.

In our last week's notice of the opening of the campaign, at Exeter-hall, the title of the "*London* Sacred Harmonic Society" was printed by mistake. The impression produced by Haydn's dull and heavy "Seasons," as we anticipated, despite of a most masterly performance, under Costa's direction, was but slight. The 'Hunting Chorus," with Jarrett's clever execution of the *horn* obligato, was re-demanded; the "Tal y-ho!" of the Sacred Harmonists will not have reflected discredit on the Melton Mowbray huntsmen. The other encore was for the comic ballad, "There was a squire," sung by Miss Birch, the profane portion of the "oratorio," being evidently more in favour than the sacred pieces. Messrs. Lockey and Hall. The directors state that the principal feature of the novel entertainments will be the production, by a complete choir, of "those rare and beautiful old English glees and madrigals which have for centuries lain unpractised and obscure." The novelty, so far, is but following in the wake of the English Glee and Madrigal Union, established with such success last season at Willis's Rooms, under her Majesty's patronage, and at which the exquisite part-singing of Mrs. Endersohn, Miss Williams, Messrs. Lockey, Land, Francis, Hobbs, and Phillips, created such a great sensation. The London Thursday Concerts are, however, not to be confined to this excellent speciality, and the directors, states the prospectus, "have thought it wise to add much vocal and instrumental performances as shall render the concerts agreeable to the most fastidious musical taste, and popular with every one." They further declare, that, if public patronage be extended to them, they will produce at least eight glees and madrigals at each concert, and also illustrate the characteristic music of Germany by a complete additional German choir, for the performance of the choruses and *lieder tafel* (table or convivial songs). The directors conclude by declaring, that "they will not promise more." We hope they have not already promised too much. Again and again must it be emphatically repeated, that the great fault in all our undertakings for public amusement is, that too much is aimed at. Doing little, but doing it right well, is better policy than to deal in generalities, and accomplish nothing. The programme of Thursday, with Mr. T. H. Severn as conductor, included Wilbye's "madrigals, "Flora gave me fairest flowers," and " Sweet honey-sucking bees;" G. Converse's " When all alone ;" and Festa's " Down in a flowery vale "—all as familiar as household words. The glees were, Sir Henry Bishop's " Where art thou, beam of light?" and "When wearied wretches;" Muller's " Maydav ;" Stevens's " Spotted Snakes ;" and Webbs's " Mighty Conqueror." There were, also, Mendelssohn's "Hunting Chorus," and the National Anthem. The vocal solos were Mr. H. Smart's "Estelle," and some melodies of the Nile, arranged by Dr. Rimbault, sung by Miss Dolby; Wallace's " Scenes that are brightest," and " Cease your funning," by Miss Louisa Pyne; Schubert's " Wanderer," by Mr. Whitehouse; Rossini's " Largo al factotum," by M. Jouglaman; Mendelssohn's " By Celia's arbour," by the new promising tenor, Mr. Swift; Blewett's " Hazel Bower," by Mr. Young; Donizetti's " Il questo sampliee," by Miss Dinekes; Hatton's " Old Simon the Cellarer," by Mr. Farquharson Smith; and A. A. Macfarren's duo, the " Fairy Tryst," by Missed L. Pyne and Dolby. When it is added that M. Szekely played a pianoforte fantasia, and Herr Engelke a violoncello piece, it may be asked, what is the difference between this scheme and that of the ordinary miscellaneous concert which has existed time out of mind? It was, in fact, the reproduction on the London Wednesday Concerts, only instead of an orchestra with overtures there is an admirable choir of forty singers, selected from the famed Royal Italian Opera chorus, for glees and madrigals, when were, of course, rendered with exquisite light and shade. Sir H. Bishop's glee, " Where art thou ?" sung by Miss Louisa Pyne, Miss Dolby, Mr. Swift, and Mr. Whitehouse, was encored. Miss Louisa Pyne was compelled to repeat both her airs. It is astonishing what a deal of virtuous indignation may be got up on the most erroneous data: Miss L. Pyne is accused of Vandalism in omitting the fine old English air, " Cease your funning," with bravura variations. What is the fact? The melody is by Gemeriani, the Italian composer; and there is not an English *prima donna*, from the original representative of *Polly*, down to the days of Miss Stephens, Miss Paton, Miss Green, Miss M. Tree, &c., who did not make "Cease your funning," like the "Soldier tir'd," the *chemi de bataille* for display. The new tenor, Mr. Swift, with a generous energy and musical delivery of Mendelssohn's air: he has a magnificent voice, and only requires confidence and experience to become one of the first of English tenors. The hall was not so well attended as the cheap prices ought to have commanded. At the National Anthem the music was printed for the audience, who were invited to join.

MUSICAL EVENTS.

M. Jullien's Concerts terminated on Wednesday night, after one of the most successful seasons he has ever met with. The *Bal Masqué* was given last night (Friday) with great splendour. Mr. Bunn is actively engaged in his preparations for the dramatic and operatic campaign: Mr. J. Morton is stage manager. Meyerbeer's "Robert le Diable" will be produced for the *début* of Madame Garcia, the new *prima donna*

The Society of British Musicians gave their third *soirée* last Monday.

Mr. Payne's oratorio, "Belshazzar's Feast," was performed, under the composer's direction, at the Whittington Club, on Wednesday, with Tolbecque as leader. Mrs. A. Newton, Miss H. Condell, Miss S. Law, Messrs. Manley and Barham, were the chief vocalists.

The annual *soirée musicale* ball given by the male students of the Royal Academy of Music, took place on Thursday.

Next Tuesday Miss Kate Hickson's concert, in aid of the Hungarians and Poles, will be given at the Hanover Rooms. Miss Dolby's third and last *soirée* will take place on Tuesday. The two King's scholarships of the Royal Academy of Music will be awarded next Friday.

The success of the Italian opera company at St. Petersburg has been very great this season, up to the latest accounts: this is easily accounted for on meuliening the names of the CONI *Fratelli*, namely, Grisi and Pursiani, Signors Mario, Signor Marini, and Mdlle. de Meric, Signori Mario, Tamberlik, Pazzoni, Rossi, Tamburini, Tagliafico, Polonini, Cecconi, Ronconi, and Herr Formes.

THE THEATRES.

DRURY LANE.

The committee of renters has undertaken the redecoration of the interior of this theatre, which it comes into Mr. Anderson this day, and the projected improvements will have, therefore, to be completed in a comparatively short time. We remark that some of our contemporaries announce that Miss Glyn and Mr. Anderson will appear in *Cleopatra* and *Antony* on the 26th; others state that Miss Glyn will open in *Bianca* on Boxing-night; but we believe that no sufficient authority yet exists for either of these statements. Miss Glyn, however, has announced her last public reading, and declined conceding to any more applications from the provinces, in order, to preserve her energies for the great demand that will be made upon them at the commencement of her engagement. This is wise; for on her efforts, manifestly, the prospects of the drama and the national theatre depend. Happily, the public has entire faith in her powers; and we doubt not but that she will approve herself the Rachel of the British stage.

OLYMPIC.

Mr. Hoskins has migrated from Sadler's Wells to the Olympic, and appeared on Monday in "Plots for Petticoats," as *Jack Finish*. His vivacity and versatility stood him in good stead as an eccentric delineator of *Yankee peculiarities*, which he well conveys by the assistance of a pleasant and delight. A Miss Lingham, also, appeared as the *Duchess of Torrenuova*; evidently an experienced actress, but inapt for juvenile parts.

PRINCESS'.

A Miss Frankland has appeared at this theatre in the characters of *Rosaline Somers* and *Portia* ("Merchant of Venice"); a ladylike actress, but manifestly wanting in power.

HAYMARKET

Mr. Webster has made a great hit in his impertation of M. Regnier's play (" Mdlle. de la Seigliere," from the novel of the same name by M. Jules Sandeau. It was produced on Tuesday under the title of " The Man of Law." As *Destournelles*, the legal agent of the *Baronne de Vaubert* (Mrs. Stirling), exposing to be recompensed with her hand, rejected, seeking revenge by undertaking the cause of the returned son, defeated by the finer tactics of the Baronne, recovering from that defeat, and ultimately winning the cause which he had so practically advocated, by effecting the union of the heir with the daughter of the *Marquise de la Seigliere* (Mr. Lambert)—in all these phases of characters and interesting situations, Mr. Webster and Mrs. Stirling exhibited an artistic rivalry which ended, as it deserved, in the triumphant success of the play. Mr. Howe, as *Bernard*, the son, acted with manliness and great effect; and Miss A. Vining, as *Helène de la Seigliere*, was remarkably impressive. To Mr. Oxenford Murray's (of late a character-part, that of a bouncing maiden) rather over-dramatic, but which he made important by the care and propriety with which it was impersonated. We have no doubt of the attractive nature of this comedy, which, by the way, is in four acts—an unusual but not unpleasing arrangement.

SADLER'S WELLS.

On Saturday "The Man of the World" was performed, and the part of *Sir Pertinax M'Sycophant* undertaken most successfully by Mr. Phelps.

WOOLWICH.—On Monday Miss Edith Heraud performed the part of *Juli de Mortemar* to Mr. Henry Betty's *Richelieu*. The house was crowded to excess, and the performance decidedly successful.

SMITHFIELD CLUB PRIZE CATTLE.

CLASS 6. NO. 85.—MR. KINDERLEY'S PEMBROKESHIRE OX.—£10 PRIZE.

CLASS 2. NO. 20.—MR. LONGMORE'S HEREFORDSHIRE OX.—£30 PRIZE.

THE SMITHFIELD CLUB CATTLE SHOW.

THE annual Exhibition of this useful and highly influential society took place during the present week, the private view being on Monday evening last, after the judges had given in their decisions. The public were admitted on the following morning. As regards numbers, the stock exhibited exceeds that of previous years; and, as a whole, the quality was more than equal to that of previous exhibitions. The Herefords fully maintained their high reputation, as might be surmised by the number of prizes carried off with animals of this breed. The show of Devons did not come up to an average; notwithstanding, the new arrangements regarding classification of the animals were highly favourable for their chances of success. The short-horns were neither as numerous nor successful as in former years, except in Class 7, fattened cows and heifers, in which they showed above other breeds, and, in all probability, will for some time to come continue to do so. This gives us the opportunity of remarking that the value of a breed must not be estimated by its carrying off prizes either at the Smithfield or agricultural shows, cattle being required for other purposes than to be slaughtered for beef. The supply of milk, cheese, butter, and veal are quite of equal importance. The choice of a proper breed depends, therefore, upon the juxtaposition of market, soil, climate, &c. As a general rule, it may be stated, that for fair arable and grazing farms the Hereford is the best for feeding purposes; where the climate is somewhat severe, the Devon ought to be preferred, particularly if the herbage is scanty; for the production of milk, butter, cheese, and veal, the short-horns excel all others, as the cows will make a greater weight of good fair beef after the third calf, with a less expenditure of food, than any other breed.

In Class 1, for oxen and steers of any breed, above 4 and not above 5 years old, the prizes of £30, £15, and £5 were respectively taken by a 4 years and 10 months old Hereford ox, a 4 years and 6 months old short horned steer, and a 4 years and 10 months old Hereford ox; the last being fed by his Royal Highness Prince Albert.

In Class 2, oxen and steers of any breed above 3 and not exceeding 4 years old, there were exhibited some very fine animals; that which obtained the principal prize in this class being decidedly the best animal in the Exhibition. It was a 3 years and 8 months old Hereford steer, bred and fed by Mr. E. Longmore, Ardforton, near Ludlow, Salop. The second prize animal was very good: the same remark applies to one fed by his Royal Highness Prince Albert; the last two were Herefords.

Class 3, oxen and steers of any breed above 2 and not exceeding 3 years old, the Herefords were triumphant, the prizes of £25 and £15 being awarded for two animals of that breed, each 2 years and 10 months old, the fortunate feeders being Mr. Joseph Phillips, of Ardington, Berks; and his Royal Highness Prince Albert.

In Class 4, oxen and steers of any breed, not exceeding 80 stone weight, the principal prize of £20 was awarded to an animal of the North Devon breed, fed by the Earl of Leicester. The second prize of £10 was given to a Hereford, fed by Mr. D. Maydwell, Ashtead, Surrey.

In Class 5, for animals over 80 stone, the first prize was given to the Earl of Leicester, for a beautiful animal of the North Devon breed, 3 years and 8 months old. The second prize of £5 was also given to a Devon, belonging to Mr. Bond, near Taunton.

In Class 6 Scotch, Welsh, or Irish—the only prize, £10, was awarded to a Pembroke ox, 6 years old, which, though a good animal, was by no means as favourable a specimen of that breed as we have sometimes seen. In this class there were some good useful animals of the Galloway and West Highland breeds, but not possessing any distinguished merit.

In Class 7, cows and heifers under 5 years old, the short-horns took away all the prizes; the principal one, £20, being given to that worthy old English farmer, Mr. Samuel Druce, of Eynsham, Oxford.

In Class 8, fattened cows, 5 years and upwards, a similar remark applies; short-horns taking the £20 and £10 prizes.

In Class 9, fattened cows of 3 years old and upwards, having had at least two calves, the only prizes, £20 and £10 each, were awarded to short horns—thus justifying our preliminary remarks.

In sheep the Leicesters were good: all the praise we further add is, that there did not appear to be any retrogression. In long-wools the Cotswold continue to hold their deservedly high character; and, if no improvement was perceptible in the animals of the Southdown class, belonging to the most celebrated breeders, there were evident symptoms that others were fast coming up to them. His Grace the Duke of Richmond obtained the first prize; Mr. J. V. Shelley coming in second best.

In pigs, Mr. J. Coate, near Blandford, obtained a prize for some good animals, 26 weeks and 2 days old, though we really could not see their superiority over an adjoining pen exhibited by Sir John Conroy, Bart. We may remark that Sir John appears to have two excellent breeds, one black and the other white, in Class 20, pigs above 26 and not exceeding 52 weeks old. Mr. Coate also obtained the head prize for a pen of three 20 weeks and 5 days old improved Dorset pigs. His Royal Highness Prince Albert obtained the second prize for an excellent pen of Bedford and Suffolk pigs. In Class 12, pigs above 12 and under 18 months, Mr. Coate obtained the principal prize for some very fine animals, the Earl of Radnor taking the second prize for his excellent Coleshill breed. In the extra stock of this class the only prize, a silver medal, was awarded to Mr. William Culliford, of Hayling Island, Hants, for a very large black pig, 2 years and 9 months old, designated as the Hampshire and Sussex breed, but which we consider belonged to the Rudgwick

We subjoin the list of prizes:—

OXEN OR STEERS.

Class 1.—The first prize of 30 sovereigns to No. 4, viz. to Mr. William Heath, of Ludham-hall, Norwich—a silver medal to the breeder, viz. to Mr. John Oakes, of Alcott, Church Stretton; the second prize of 15 sovereigns to No. 1, viz. to Mr William Henry Brickwell, of Lockhampstead, Bucks; the third prize of sovereigns to No. 51, viz to his Royal Highness Prince Albert.

Class 2.—The first prize of 30 sovereigns to No. 20, viz. to Mr. Edward Longmore, Adforton, near Ludlow—a silver medal to the breeder, viz. to Mr. Edward Longmore; the second prize of 15 sovereigns to No. 37, viz. to Mr. William Heath, of Ludham-hall, Norwich; the third prize of 5 sovereigns to No. 29, viz. to his Royal Highness Prince Albert.

Class 3.—The first prize of 25 sovereigns to No 55, viz. to Mr. Joseph Phillips, of Ardington, near Wantage, Berkshire—a silver medal to the breeder, viz. to Mr. Thomas Carter, of Dodmor, near Ludlow, Salop; the second prize of 15 sovereigns to No. 51, viz to his Royal Highness Prince Albert; the third prize of 5 sovereigns to No. 52, viz. to Mr. Isaac Niblett, of Conygre Farm, Filton, near Bristol.

Class 4.—The first prize of 20 sovereigns to No. 61, viz. to the Right Hon. the Earl of Leicester, of Holkham-hall, Norfolk—a silver medal to the breeder, viz. to Mr. William Baker, of Bishop's Nympton; the second prize of 10 sovereigns to No. 62, viz. to Mr. Daniel Maydwell, of Ashstead, Surrey.

CLASS 8. NO 122.—MR. JOSEPH GILLETT'S DURHAM, OR SHORT-HORNED COW.—£10 PRIZE.

CLASS 3. NO. 55.—MR. JOSEPH PHILLIPS'S HEREFORD STEER.—£25 PRIZE.

SMITHFIELD CLUB PRIZE CATTLE.

CLASS 3. NO. 51.—PRINCE ALBERT'S HEREFORD OX.—£15 PRIZE.

CLASS 1. NO. 4.—MR. WILLIAM HEATH'S HEREFORD OX.—£30 PRIZE, AND SILVER MEDAL.

Class 5.—The first prize of 15 sovereigns to No. 76, viz. to the Right Hon. the Earl of Leicester, of Holkham-hall, Norfolk—a silver medal to the breeder, viz. to Mr. George Turner, of Burton, near Exeter; the second prize of 5 sovereigns to No. 78, viz. to Mr. Thomas Bond, of Bishop's Lydeard, near Taunton.

Class 6.—The prize of 10 sovereigns to No. 85, viz. to Mr. G. H. Kinderley, of Kilpaison, Pembroke.

COWS AND HEIFERS.

Class 7.—The first prize of 20 sovereigns to No. 102, viz. to Mr. Samuel Druce, of Eynsham, near Oxford—a silver medal to the breeder, viz to Mr. Samuel Druce; the second prize of 10 sovereigns to No. 105, viz. to Mr. Richard Stratton, of Broad Hinton, near Swindon, Wilts; the third prize of 5 sovereigns to No. 112, viz. to Mr John Phillips, of Ardington, near Wantage, Berkshire.

Class 8.—The first prize of 20 sovereigns to No. 121, viz. to the Right Hon. Lord Feversham, of Duncombe-park, Helmsley, York—a silver medal to the breeder, viz, to the Right Hon. Lord Feversham; the second prize of 10 sovereigns to No. 122, viz. to Mr. Joseph Gillett, of Little Haseley, near Wheatley, Oxon.

Class 9.—The first prize of 20 sovereigns to No. 125, viz. to Mr. William Holland, of Lightcliffe, near Halifax—a silver medal to the breeder, viz. to Mr. William Holland; the second prize of 10 sovereigns to No. 129, viz. to Mr. Robert Beeman, of Moreton-in-the-Marsh, Gloucester.

LONG-WOOLLED SHEEP.

Class 10.—The first prize of 20 sovereigns to No. 155, viz. to Mr. R. L. Bradshaw, of Burley-on-the-Hill, Oakham—a silver medal to the breeder, viz. to Mr. R. L. Bradshaw; the second prize of 10 sovereigns to No. 159, viz. to Mr. R. F. Hall, of Healey, near Bantry; the third prize of 5 sovereigns to No. 156, viz. to Mr. George Walmsley of Rudston, near Bridlington.

Class 11.—The first prize of 20 sovereigns to No. 171, viz. to Mr. Lawrence Willmore, of Whetstone, near Leicester—a silver medal to the breeder; viz. to Mr. Lawrence Willmore; the second prize of 10 sovereigns to No. 168, viz. to Mr. Thomas Pulver, of Broughton, near Kettering; the third prize of 5 sovereigns to No. 164, viz. to the Marquis of Exeter, of Burghley House, Stamford.

LONG-WOOLLED (NOT BEING LEICESTERS).

Class 12. The prize of 10 sovereigns to No. 173, viz. to Mr. Robert Beman, of Moreton-in-the-Marsh, Gloucester—a silver medal to the breeder, viz. to Mr. Robert Beman.

CROSS-BRED SHEEP.

Class 13.—The first prize of 10 sovereigns to No. 189, viz. to Mr. J. R. Overman, of Burnham Sutton, near Burnham Market—a silver medal to the breeder, viz. to Mr. J. R. Overman; the second prize o 5 sovereigns to No. 188, viz to Mr. Samuel Druce, of Eynsham, near Oxford.

Class 14.—The prize of 10 sovereigns to No. 194, viz. to Mr. J. R. Overman, of Burnham Sutton, near Burnham Market, Norfolk—a silver medal to the breeder, viz. to Mr. J. R. Overman.

SHORT-WOOLLED SHEEP.

Class 15.—The first prize of 20 sovereigns to No. 211, viz. to his Grace the Duke of Richmond, of Goodwood, Chichester—a silver medal to the breeder, viz. to his Grace the Duke of Richmond; the second prize of 10 sovereigns to No. 202, viz. Mr. William Sainsbury, of West Lavington, Devizes.

Class 16.—The prize of 10 sovereigns to No. 213, viz. to Mr. William Sainsbury, of West Lavington, Devizes—a silver medal to the breeder, viz. to Mr. William Sainsbury

Class 17.—The first prize of 20 sovereigns to No. 220, viz. to his Grace the Duke of Richmond, of Goodwood, Chichester—a silver medal to the breeder, viz. to his Grace the Duke of Richmond; the second prize of 10 sovereigns to No. 217, viz. to Mr. J. V. Shelley, of Maresfield Park, Maresfield.

SHORT-WOOLLED (NOT BEING SOUTHDOWNS.)

Class 18.—The prize of 10 sovereigns (the prize withheld)—silver medal to the breeder (the prize withheld).

PIGS.

Class 19.—The first prize of 10 sovs. to No. 243, viz. to Mr. John Coate, of Hammoon, near Blandford, Dorset—a silver medal to the breeder, viz to Mr. John Coate; the second prize of 5 sovereigns to No. 246, viz. to Mr. William Mills Barber, of Langley Broom, Slough, Bucks.

Class 20.—The first prize of 10 sovereigns to No. 251, viz. to Mr. John Coate, of Hammoon, near Blandford, Dorset—a silver medal to the breeder, viz. to Mr. John Coate; the second prize of five sovereigns to No. 252, viz. to his Royal Highness Prince Albert.

Class 21.—The first prize of 10 sovereigns to No. 258, viz., to Mr. John Coate, of Hammoon, near Blandford—a silver medal to the breeder, viz. Mr. John Coate; the second prize of 5 sovereigns, to No. 260, viz. to the Earl of Radnor, Coleshill, near Faringdon.

The gold medal for the best ox or steer in Classes 1, 2, 3, 4, 5, or 6, to No. 30, viz. to Mr. Edward Longmore, of Adforton, near Ludlow, Salop.

The gold medal for the best cow or heifer in Classes 7, 8, or 9, to No. 102, viz. to Mr. Samuel Druce, of Eynsham, near Oxford

The gold medal for the best pen of long-woolled sheep in Classes, 10. 11, or 12, to No. 155, viz. to Mr. R. L. Bradshaw, of Burley-on-the-Hill, Oakham.

The gold medal for the best pen of short-woolled sheep in Classes 15, 16, or 18, to No. 211, viz. to his Grace the Duke of Richmond, of Goodwood.

The gold medal for the best pen of pigs in Classes 19, 20, or 21, to No. 251 viz. to Mr. John Coate, of Hammoon, near Blandford.

EXTRA STOCK.

A silver medal for the best beast in extra, to No. 66, viz. to Mr. William Heath of Ludham-hall, Norwich (this animal was too heavy for Class 4).

A silver medal for the best long-woolled sheep to No. 184, viz. to Mr. Lawrence Willmore, of Whetstone, near Leicester.

A silver medal for the best short-woolled sheep to No. 226, viz. to Mr. William Sainsbury, West Lavington, near Devizes.

A silver medal for the best cross-bred sheep to No. 200, viz. to Mr. John Hitchman, of Little Milton, Wheatley.

A silver medal for the best pig to No. 263, viz. to Mr. William Culliford, o Hayling Island, Havant, Hants.

COMMENDATIONS.

Class 2.—The judges commend No. 23, Mr. Richard Stratton's ox; No. 31, Sir C. E. Isham's ox. They highly commend No. 34, Mr. A. Beisley's ox.

Class 7.—The judges commend No. 101, Mr. Richard Healy's heifer; No. 108, Mr. Joseph Phillips's heifer; No. 111, Mr. Isaac Niblett's heifer. They highly commend No. 115, Mr. W. M. Gibbs's heifer.

Class 18. Highly commended No. 203, Mr. John Williams's pen of Southdown wethers; No. 205, Messrs. W. and T. Arkcoll's pen of Southdown wethers. Commended No. 208, Lord Walsingham's pen of Southdown wethers; No. 210, Mr J. R. Overman's pen of Southdown wethers.

Class 16.—Commended No. 216, the Duke of Richmond's pen of Southdown wethers.

Class 19.—Commended No. 241, Mr. William Goodson's pen of pigs; No. 247 Sir John Conroy's pen of pigs; No. 249, Mr. S. Marjoribanks' pen of pigs.

Class 20.—The judges highly commend No. 254, Sir John Conroy's pen of pigs; No. 255, Mr. Stewart Marjoribanks' pen of pigs; No. 256, Mr. Thomas King's pen of pigs.

Judges of cattle and long-woolled sheep—Messrs. James Quartley, Henry Chamberlain, Thomas Greetham.

Judges of cross-bred sheep (short wools) and pigs—Messrs. Edward Pope John Ford, jun., John Parncombe.

Stewards of cattle and long-wool sheep—Messrs. George Turner, John Buckley, William Loft.

Stewards of cross-bred sheep (short wools) and pigs—Messrs. Jonas Webb James Burgess, J. Saxby.

CLASS 7. NO. 103.—MR. DRUCE'S SHORT HORN AND HEREFORD HEIFER. £20 PRIZE, AND SILVER MEDAL.

CLASS 4. NO. 61.—THE EARL OF LEICESTER'S PURE NORTH DEVON OX. £20 PRIZE, AND SILVER MEDAL.

SMITHFIELD CLUB CATTLE SHOW.

AGRICULTURAL IMPLEMENTS.

An unusually large assortment of implements and machines of the various makers were exhibited. The tile-making machines, as usual, were conspicuous, from their being generally exhibited at work. Most of these have been described at various times in the ILLUSTRATED LONDON NEWS, with the exception of a powerful one by Hart. This machine consists of a worm and toothed wheel placed in the centre of a long cast-iron trough or box; the worm acts upon a powerful screw with a piston at either end, and when the clay is forced through dies at each end of the box, about 2 cwt. of clay being contained in each box. The pipes are received on tables, and are cut off in the usual way. This machine is exceedingly simple, and the work is done by two hands.

Messrs. C ayton, Shuttleworth, and Co exhibited one of their excellent small portable engi es, and a very good oscillating cylinder fixed engine of 8-horse power, arranged with a view to ground-plan and economy of space. This firm also exhibited an excellent specimen of a corn-mill, adapted to large holdings; the stones are each 2 feet 8 inches in diameter, fixed in a cylindrical metal frame.

Mr Crosskill exhibited a variety of models of his various machines manufactured by him; and one of Hussey's reaping-machines, which he is manufacturing under an agreement with Messrs. Deane, Dray, and Co.

Tuxfords of Boston, exhibited one of their portable steam-engines at work in a yard adjoining. These engines have been selected by the French Government for the Museum of Arts at Paris; and also by Prussia, for the Agricultural Museum at Magdeburg.

Messrs Deane, Dray, and Co. had several novelties. Among these is a new turn-wrist plough of peculiar construction, the mould-boards being shifted by a lever; the head of the beam is supported upon a gallows, and so contrived that the lever which shall bear equally upon the plough is working upon sideling ground. Messrs. Dray and Co. also exhibit the "American Reaping Machine," invented by Mr. Hussey. This machine obtained great notoriety towards the termination of the late harvest, in successfully competing with the machine for the same purpose by Mr. M'Cormick, which received the council medal at the Great Exhibition, where they were both shown. M'Cormick's and Hussey's machines were afterwards tried at the Cleveland Agricultural Society's meeting, and the prize awarded to Hussey.

Smyths, of Pessenhall, exhibited specimens of their drills, with some important improvements in the arrangement of the coulcering sewers, by which the cylinders are kept in a more nearly perpendicular position, and allowing the coulters to range in a straight line with the carriage wheels, so affording greater ease to the horses. In the three-row drill they have added a new and universal apparatus for the regulation of the manure; the seed is regulated by cups, which they conceive work much more regularly than brushes; it is also conducted through a separate coulter, and so arranged that the manure is covered up before the seed is deposited.

An excellent improved horse-hoe was also shown by Mr. Smith, of Kettering, with an ingenious contrivance for steering it, so that the weeds may be completely eradicated without any injury being done to the crop, a circumstance which occasionally occurs with other descriptions of horse-hoes.

Messrs. Garretts exhibited, as they usually do, a large assortment of specimens of their threshing, winnowing, brick-making, and other machines, besides horse-hoes, drills, &c., and a new implement (Johnson's Skin Cultivator) consisting of a segmental horizontal knife, about three feet in length, with two coulters placed at each end; the knife is raised to a height of about nine inches from the soil. The object of this machine is to cut stubbles a short distance below the surface, the depth being regulated by a screw.

Barrett, Exall, and Andrewes, in addition to a selection of their ordinary implements, exhibited a chaff-engine, into which they have introduced an entirely new system of feeding. In the old plan it was found that the rollers through which the material to be cut passed were continually choking up, and a variety of contrivances, many of them exceedingly ingenious, were invented for the purpose of getting over the difficulty. Although they all cut long dry straw well enough at exhibitions, yet, when they came to be filled with inferior or badly-got hay, they were liable to choke, and often, in consequence, got broken. Messrs. Barrett have introduced a double endless chain, between which are a series of circular bars. The coarn and hay work round two pinions at top and bottom. The straw is firmly held between this series of bars for its whole length, which is a great improvement in the principle of feeding, as it prevents short, sticky pieces turning round and choking up. If it answers in practice generally as well as it appears to do here, it must be considered as a decided improvement in that important machine, the chaff-cutter.

LAW INTELLIGENCE.

THE JEWS IN PARLIAMENT.—In the Court of Exchequer, on Monday, before Mr. Baron Martin and a special jury, the action of debt of Miller v. Salomons, M.P., to recover from the defendant three penalties of £500, for having sat and voted in the Commons' House of Parliament, without having taken the oath of abjuration as required by act of Parliament, came on. Mr. Serjeant Channell and Mr. Macnamara appeared for the plaintiff; Sir F. Kelly, Mr. Peacock, Mr. Wilkes, and Mr. Goldsmid for the defendant. Baron Martin interrupted the learned Serjeant in his opening of the case, and suggested that as the facts could not be in question, it ought to be submitted to a special verdict, and the opinion of a court of law taken upon the point. The counsel on both sides having agreed to the Judge's suggestion, a special verdict on the admissions made by the parties is to be drawn up, the verdict to be settled by his Lordship in case of disagreement. Mr. Baron Martin said that it was necessary for him to say what his opinion upon the matter was; but, as one of the most eminent lawyers of the day had already given his opinion in the House of Commons and duly taken the oath of abjuration, it was right that the case should be argued with a view of taking it, if necessary, to the House of Lords, the highest legal tribunal of the country. The legal opinion of this remarkable case is thus indicated in the *Times*:—"It would have been merely idle to take the opinion of a jury upon the right reading of so many Parliamentary enactments. We have directly before us the dunnage original question, whether, by taking the oath—the dispensing acts—and, collaterally, the Parliamentary measure of relief to various classes of Dissenters. Besides this mass of statutes, there are other acts of a more private nature, which the jury would be called upon to take into consideration before they could have arrived at a decision. Their law at last they must have taken from the Judge; as to the substantial facts of the case, there was no dispute. Under these circumstances, there is no room to doubt that the professional advisers of the litigants have taken the wisest course in reserving their arguments for a tribunal more competent to deal with the question than a jury sitting at Nisi Prius under the direction of a single Judge. In the course of next term we may expect a conclusive settlement of this intricate and troublesome question. We use the term advisedly, for, even if the point should be decided in a sense unfavourable to Alderman Salomons and his friends, we shall at least have definitively established their legal position. If the matter be decided in their favour, and it is the opinion of the Judges of the land that by the law of England Jews are entitled to sit and vote in Parliament, of course there is an end of all discussion. The Peers and dissentient Commoners will, no doubt, acquiesce in the decision. If they would exclude the Jews from Parliament, the appropriate remedy would be a disabling bill. If, on the other hand, Alderman Salomons be beaten, he and his friends will no longer deceive themselves as to their true position, but content themselves with seeking relief in the manner prescribed by the Constitution."

Mr. James Bacon, the son of Mr. Bacon, Q.C., has been appointed Secretary of Causes to the Master of the Rolls, in the room of Mr. Murray, appointed Clerk of the Records and Writs.

The action of Mr. Marks, the auctioneer, against the Sun Fire Office, to recover £3374 for his losses by fire, occupied the Court of Exchequer three days. After the case of the plaintiff had ended, the Attorney-General said that he ought to be nonsuited, as he had not sufficient interest in the goods and premises to sustain the action, as an unbeloved at the time it was brought. The Lord Chief Baron having overruled the objection, the Attorney-General addressed the jury, and justified the office in submitting the suspicious facts of the case to legal investigation. The Lord Chief Baron reclaimed the defendant's counsel for charging the plaintiff with arson, not calling any witnesses to substantiate such a grave accusation. The only question for the jury was whether any fraud existed. The jury found for damages, exclusive of the premises; and a surveyor is to be appointed to say what further damages the plaintiff is entitled to in respect to the non-completion of the rebuilding of the premises.

At the Lambeth Police-office, Thomas Riding, an engineer, who was taken on a warrant at the extensive iron-works of Mr. Langrage, at Biddington, near Newcastle-on-Tyne, where he is employed as foreman, charged with having unlawfully combined and conspired with Mr. George Forrest, England, of Somercy-street, Hatcham Park, in violation of an agreement, in writing, entered into with his master, was again brought up on Saturday. The case occupied the court five hours. Mr. Norton said that it was not his opinion that the defendant had taken Mr. England's plans and sections for the purpose of making any improper use of them, for had he done so he would have taken them back, and not have left them at his house. Had such been his intention, and had he carried them elsewhere, to use in opposition to Mr. England in his profession, three months, the ordinary amount of punishment, would have been sufficient; but he did not think he had done so, or that the firm of Messrs. Langrage and Co. received, or had anything to do with, or would lend themselves to receive, Mr. England's specifications under such circumstances. It was quite clear, however, that the defendant had violated the act of Parliament, but, under all the circumstances, he thought he might mitigate the punishment, and should, therefore, commit the defendant to two months' hard labour, instead of three.

RAILWAY DAMAGES.—In the Exchequer Nisi Prius Court, Dublin, on Saturday, a widow named Mason obtained £150 damages against the Dublin and Western Railway Company for the death of her husband, who was killed on the opening of the Kilkenny and Bagnalstown portion of the line on the 13th of last month, owing to negligence of the company's servants, in allowing a truck upon the line, with which the train came in contact and caused the fatal accident.

The first Kent county ball for this season took place at the Assembly-Rooms, Maidstone, on Wednesday evening, and was attended by upwards of 300 of the provincial nobility and gentry from the surrounding neighbourhood.

The late King of Hanover, by his will, has placed the children of his wife by her first husband, Prince Frederick of Prussia, though not on an equal footing with his own, yet in the relation of near kindred, and has bequeathed to each of them a handsome annuity.

NATIONAL SPORTS.

With the single exception of a steeple-chase meeting at Westbury, the appointments for the coming week are confined to coursing; they stand thus Monday, the Amicable Club, at Epsom, two days; Tuesday, Penrylin (Wales), two days; Wednesday, Deptford Inn (Wilts), four days; Thursday (South Lincolnshire Southport), and Newcastle and Durham, each two days; and Friday, Scorton (Yorkshire), two days.

TATTERSALL'S.

MONDAY.—Just enough was done this afternoon to allow of a brief quotation.

WOLVERHAMPTON STEEPLE-CHASE.

4 to 1 agst Lucy Neal | 6 to 1 agst Hardwick | 7 to 1 agst Caryl

6 to 1 agst Peter Simple

WOLVERHAMPTON HURDLE RACE.

4 to 1 agst Little Queen | 7 to 1 agst Ormsby

METROPOLITAN HANDICAP.—40 to 1 agst High Sheriff.

CHESTER CUP.

30 to 1 agst Goldfinder (t) | 1000 to 15 agst Nancy | 1000 to 15 agst Neasham

1000 to 15 agst Mary Tapley

DERBY.

18 to 1 agst Augur (t) | 25 to 1 agst Kington (t) | 50 to 1 agst Little Harry (t)

THURSDAY.—The only bets laid this afternoon were 400 to 50 agst Hobbie Noble for the Derby, and the following on the Chester Cup:—1750 to 50 and 1000 to 25 agst The Black Doctor, 1000 to 25 against Knook Knoll, 3000 to 40 agst Nancy, and 2000 to 30 each agst Merry Bird, Pitsford, and Mr. Worthington's Birdcatcher filly.

WALKING MATCH FOR THE CHAMPIONSHIP.—A walking match of ten miles for the champion's belt came off on Monday at the Copenhagen Grounds, in presence of nearly 10,000 spectators, and excited the greatest interest, as all the leading pedestrians of the day were entered for it. It was exceedingly well contested, and won by Spooner, who did the distance (10 miles) in 1 hour and 22 minutes. Westhall was second, and Old Smith third.

WHITTINGTON CLUB.—On Monday evening a dramatic entertainment was given by the members of the club, in aid of the funds of the institution when the great room, capable of holding 400 persons, was crowded for the first time on the occasion. The last item in the bill was a new farce, entitled "A and B.," written by Mr. Edward Copping, a member of the club, who played the principal character with great success, and the piece was altogether a decided hit.

HUDDERSFIELD PRELIMINARY SAVINGS-BANK.—At the annual *soirée* of the Huddersfield Mechanics' Institute, on the 6th inst., the Hon. and Very Rev. Dr. Erskine, Dean of Ripon, in the chair, it was stated that the preliminary savings-bank, formed on the 8th July last year, on the plan recommended by Mr. Charles W. Sikes, of the Huddersfield Banking Company, had produced many good results. There had been 1916 deposits, averaging in 5d each, total, £483 14s. 2d. Of this sum there has been repaid £185 14s. 7d.; transferred to individual accounts in Government Savings-Bank, £175 14s. 1d. Balance in treasurer's hands (belonging to 355 depositors, chiefly factory youths), £122 5s. 6d.

MOVING PANORAMA OF HINDOSTAN.—At the Asiatic Gallery, Baker-street Bazaar, Portman-square, a diorama of Hindostan was opened to a private view on Monday, and appears to be highly satisfactory. The scenes have been painted by Mr. Philip Phillips; the figures and animals by Mr. Louis Haghe; and the shipping by Mr. Knell; the whole being arranged by Lieut Colonel Lloard, who has resided fourteen years in India, and provided the sketches from which the more elaborate paintings have been executed. An adequate description of the numerous scenes exhibited would occupy several columns; we can therefore only remark, in the briefest terms, to the general splendour and effect. Nearly sixty different views, extending from Fort William, Bengal, to the Snowy Regions and Gangoutri, present innumerable phases of Indian life, full of picturesque incident and scenery. Dioramic changes are also resorted to, as in the case of a storm on the Ganges, the lowering sky and the lightning being brought into momently and terrible contrast. Sunrise, sunset, and moonlight effects distinguish other scenes; and the whole forms one of the most beautiful and gorgeous panoramas we ever witnessed.

NEW ORCHESTRA.—On Monday week an amateur performance of the "Messiah" was given in the theatre of the City of London Literary and Scientific Institution, Aldersgate-street, to celebrate the twenty-first anniversary of the United Tradesmen's Benefit Society. The orchestra, built expressly for this occasion, was designed gratuitously by one of the society's members, Mr. James Elliott; it contained 40 stalls, elevated and of paper decoration, resembling carved oak of Gothic design, panelled with crimson, heraldically embellished; and having in its centre an organ front, the latter being brightened by the introduction of gilt mouldings. The private galleries and the conductor's box were also panelled and heraldically decorated; and the whole presented a new feature in orchestra-building which is entitled to special commendation.

THE MONTE VIDEO REPUBLIC.—A serious outrage, say the American papers lately received, has been committed at Lincolnton, North Carolina, at the Marion Court. It appears that about a week ago, Colonel W. W. Avery, in an unarmed and defenceless condition, was passing in the Court House to his room, after an arduous discharge of duty to his client, in the case then pending, wherein Fleming was a party, when he was attacked by Samuel Fleming, who, having armed himself with a double-barrelled gun, loaded with buckshot, and Morgantown, in the same neighbourhood, a few days afterwards, when Judge Battle had taken his seat on the bench, in the afternoon session, Fleming, fully armed, walked into the Court House and deliberately took a steadier and surer sence for the first time since the attack with the cowhide; whereupon the latter rose and shot Fleming dead on the spot. This fact, it is thought, passed through his heart. Colonel Avery then delivered himself in the custody of the proper officer, with a view to a judicial investigation.

NEW CONVICT SETTLEMENT.—The project of establishing a new convict settlement at New Caledonia, in the Southern Archipelago, has for some time occupied the attention of the French Government, and active steps for the purpose are at this moment under consideration. The island is described by those who have visited it in whaling ships as presenting resources of a most valuable character, consisting of extensive forests of valuable timber, and lumber of the best description, suitable alike for ship building and other useful purposes, whilst the climate is, at the same time, said to be delightfully salubrious, and the harbours already known safe and capacious.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

Consols opened on Monday at an improvement of one per cent. on the Saturday's closing prices, the advices from Paris, although merely to the extent permitted by the predominating powers, being yet of a peaceful character. The opening price was 98¾ to ⅞, rebounding, however, before the close of business to 97⅞. Business on Tuesday appeared to have resumed its ordinary course, but an uneasy state of feeling naturally prevailed, and on Wednesday a reaction in favour to 97¾ was effected. The improvement, however, was not maintained, and had influence, several large purchases to close accounts improving the market to 97⅞, notwithstanding a few sales of money stock on private accounts. Thursday was a dull day, and with tolerable ease, notwithstanding the account has been large, and the fluctuations extensive. The extreme range of prices during the Account has been from 98¼ to 96⅜. In the event of no adverse news from Paris, the stock of 17 millions still remaining, the dividends on Consols falling due, adding to the amount of capital awaiting employment, together render it probable that Consols will quote the same price on Saturday next, the closing of the January account as they now quote with it. Exchequer Bills have remained nearly stationary, and in Reduced and New Three-and-a-Quarter per Cents no important business has been transacted. The market at the close of the week was firm at the following prices:—Bank Stock, 215; Reduced, 96¾; New Three-and-a-Quarter per Cent. Ans., 97⅛; Long Ans. to expire January, 1860, 7; India Bonds, under £1000, 61 p.; Consols for Account, 98; Exchequer Bills, £1000, 12 p.; Ditto, £500, 12 p.; Ditto, Small, 47 p.

Mexican stock has improved during the past week, notwithstanding the news of large commercial failures. Colonel Facio has announced the sum received by the *Zee* steamer, on behalf of bills, at 1,700,000 dollars, and 76,466 dollars on the same account, to the order of Baron Goldamid. He also intimates, that, although the next dividend due in January may not be paid when due, every exertion will be made to meet it as early a date as possible. The price of the stock has ranged from 23¾ to 24¾. Spanish stock is being converted by one portion of the bondholders, while another not uninfluential body of stockholders resist the conversion, and talk seriously of procuring better terms. The price of the Five per Cents has improved to 20¾, and the Three per Cents have been in demand, quoting 40¾. Peruvian Five per Cents improved towards the close of the week to 89¾. A reaction has occurred in Brazilian, which quotes 93. Sardinian Bonds have improved 1 per cent., and the market at the close of business showed buoyancy at the following closing rates:—Brazilian Bonds, Five per Cent., 93; Ecuador Bonds, 3; Mexican, Five per Cents, ex Jan. Coups, 24¾; Peruvian Bonds, Five per Cent., 89¾; Ditto, Deferred, 46; Portuguese, Four per Cent., Account, 34¾; Russian Bonds, Four-and-a-Half per Cent., 104; Sardinian Bonds, Five per Cent., 84¼; Spanish, Five per Cents (1840, 20¾; Deferred, New, 20¼; Ditto, Three per Cent., 40¾; Venezuela Bonds, Three-and-Quarter per Cent., 84¾; Belgian Four-and-a-half per Cent., 88; Dutch, Two-and-a-Half per Cent., 58¾.

Railway stock is firmer, principally having advanced from the loss of the market being good from *bona fide* investments. Closing rates are:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 10¾; Amberg, Nottingham, Boston, and Eastern Junction, 5¾; Bristol and Exeter, 79; Caledonian, 10¾; [illegible] Northern, 17⅛; Ditto, Halves A, 5⅞; Ditto, Halves B, 4¼; Great Western, 84¾; Lancashire and Yorkshire, 96; Leeds Northern, 14; London and Blackwall, 7; London, Brighton, and South Coast, 94⅛; London and North Western, 115⅛; London and South-Western, 84¾; Midland, 59; North British, 6¾; North Staffordshire, 9¾; Shrewsbury and Birmingham, 4, 6¾; South-Eastern, 20¾; Stirling and Dunfermline, 9¾; York, Newcastle, and Berwick, 18; Ditto Extension, 12¾; York and North Midland, 21¾.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 33½; Leeds and Bradford, 101; Northern and Eastern, New, 48¾.

PREFERENCE SHARES.—Eastern Counties, Extension, No. 3, ¾ pm.; Ditto New, 6 per Cent., 10¾ x d; Great Northern, Redeemable Scrip, 3½; Manchester, Sheffield, and Lincolnshire, New £10, 12¾.

FOREIGN.—Boulogne and Amiens, 10¾; Great Indian Peninsula (£3 10s. paid), 4; Northern of France, 14½, Paris and Orleans, 35; Paris and Rouen, 23; Paris and Strasbourg, 12½; Rouen and Havre, 8¾.

THE MARKETS.

CORN EXCHANGE.—Since our last report, very moderate supplies of English wheat have arrived coastwise or by land carriage. The condition of the new wheats having been affected by the unusual severities of the atmosphere, the demand has ruled inactive, and, in some instances, prices have given way 1s per quarter. Fine foreign wheats have so d somewhat freely, at full quotations, but for all secondary and middling parcels the country has very little attention. Bar ey—the receipts of which have somewhat increased—has changed hands slowly, and late rates have been with difficulty supported. The malt trade has continued firm, at full currencies. There has been less demand for oats, at barely stationary prices Beans have fallen 1s per quarter Grey and maple peas have given way to the same extent; but white parcels have been held at full currencies. Indian corn, afloat, has realised a trifling advance; and some cargoes of P lish Odessa wheat, off the coast, have changed hands at 32s 6d per quarter. A stead business has been doing both in English and foreign flour.

English—Wheat: Essex and Kent, red, 36s to 40s; ditto, white, 36s to 42s; Norfolk and Suffolk, red, 35s to 38s; ditto, white, 37s to 44s; rye, 28s to 30s; grinding barley, 22s to 24s distilling ditto, 26s to 30s; malting ditto, 32s to 34s, Norfolk and Lincoln malt, 50s to 54s; grinding beans, 28s to 30s; Kingston and Ware, 32s to 35s; Chevalier, 37s to 38s; Yorkshire and Lincolnshire feed oats, 17s to 20s; potato ditto, 19s to 23s; Youghal and Cork, black, 16s to 17s; ditto, white, 18s to 20s; tick beans, new, 27s to 29s; ditto, old, 30s to 31s; grey peas, 27s to 30s; maple 30s to 32s; white, 31s to 34s; boilers, 31s to 37s per quarter. Town-made flour, 38s to 42s; suffolk ditto, 36s to 38s; Hoxton and Kentish, 38s to 39s per 280 lb. Foreign: Baltic red wheat, 34s to —s; ditto white, —s to —s; barley, —s to —s; oats, —s to —s; beans, —s to —s; peas, —s to —s; flour, American, 19s to 22s per barrel; Canada, 0s to 0s per barrel; French, 37s to 39s per 280 lb.

The Seed Market. A few parcels of clover seed have changed hands, all full prices. 400 quarters Odessa linseed have sold at from 44s 6d to 45s 6d per quarter. Ditto, afloat to Archangel, 41s 6d to 43s per quarter. Cakes steady, and quite as dear

Linseed, English, sowing, 46s to 48s; Baltic, crushing, 46s to 47s; Mediterranean and Odessa, 46s to 48s; hempseed, 32s to 37s per quarter. Coriander, 9s to 11s per cwt. Brown mustard-seed, 7s to 8s per bushel; white ditto, 8s to 9s. Tares, 5s 6d to 6s 6d per bushel. English rapeseed, £23 to £24 per last of ten quarters. Linseed cakes, English, £8 10s to £10 0s; ditto, foreign, 6s to £8 per 1000. Rape cakes, £4 7s to £4 4s per ton. Canary, 37s to 42s per quarter Foreign clover-seed, per cwt. Red, —s to —s; white, —s to —s; extra, sp to —s. Foreign, red, —s to —s; extra, —s; white, —s to —s; extra, —s per cwt.

Bread—The prices of wheaten bread in the metropolis are from 6d to 6½d; of household ditto, 5d to 5½d per 4lb loaf.

Imperial Weekly Average.—Wheat, 37s 6d; barley, 27s 0d; oats, 18s 2d; rye, 37s 6d; beans, 36s 6d; peas, 37s 6d.

The Tea Trade Average.—Wheat, 36s 9d; barley, 27s 6d; oats, 18s 0d; rye, 35s 6d; beans, 36s 3d; peas, 36s 6d.

Duties.—Wheat, 1s; barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Tea. Since the close of the public sales, a very limited business has been doing in all kinds of tea, of which we have, in some instances, a downward tendency. Common sound Congou has changed hands as low as 8d to 8½d per lb. The market is heavily supplied.

Sugar.—Generally speaking, qualities of fine grain are held to a fair extent, at full prices; but other kinds have commanded very little attention. Low and mild yellow Barbadoes has changed hands at 39s 6d per cwt. Refined Demerara, 40s to 41s per cwt. Grocery lots given way 6d. per cwt. Good and fine grainy yellows, 37s to 38s 6d. low and mid white Benares, 34s 6d to 35s. Madras and Bengal have been lower to purchase. Refined goods are in moderate request, at 42s 6d to 43s for low to fine grocery.

Coffee.—There has been rather more doing in our market, at prices fully equal to those obtained last week. Good and native Ceylon has realised from 40s to 41s per cwt.

Rice.—For rough the demand is somewhat active, and white Bengal is worth 10s to 10s 6d per cwt. Cleaned qualities command very little attention.

Provisions.—Irish butter is in very moderate request, at a decline in the quotations of 2s per cwt. Choice qualities of Carlow, Cork, and Limerick, 86s to 88s; Waterford, 84s to 85s; Limerick, 70s to 74s; Tralee, 70s to 72s; Sligo, 70s to 74s per cwt. Foreign is held at full currencies, but fresh Friesland and Holstein are worth 92s to 94s per cwt. Bacon is in steady demand, at 54s to 56s for prime sizeable Waterford, and 42s to 43s for heavy. Fine Irish lard, in bladders, is selling at 58s to 60s; and fine 56s to 58s per cwt.

Tallow.—Our market is to-day firm, at 37s per cwt. for new P Y C on the spot. Town tallow, 36s 6d to 37s per cwt., net cash; rough fat, 2s 1d per 8lb The stock is now about 70,000 casks.

Oils.—The general demand is exceedingly inactive, on somewhat lower terms. Linseed may be purchased at 25s 3d per cwt.

Coals.—North Percy Hartley, 15s; Tanfield Moor, 16s; Townley, 15s 6d; Gosforth, 17s 9d; Bell, 16s 6d; Redcar, 15s; Hilton, 15s; Hetton, 15s; Haswell, 15s per ton.

Hay and Straw.—Meadow hay, £3 17s to £3 5s, clover do, £5 5s to £4 5s 6d; and straw, £1 to £1 7s per cwt. Trade dull.

Spirits.—Jamaica rum is dull in sale, on rather lower terms. About 200 puncheons Leeward Island have sold at 1s 4d to 1s 4½d; and 80 best Indis at 1s 5d to 1s 5½d per gallon; good brandy is in good request, and quite as dear as last week. British-made spirit flat, at 9s 8d to 9s 9½d. Geneva, 1s 7d to 2s per gallon.

Hops.—The demand for all new hops is active, at fully last week's prices. Yearlings are quite as dear, but old parcels are neglected

Wool.—As the season is now nearly the case at this period of the year, our market rules heavy, at barely stationery prices.

Potatoes.—Selected samples are in fair request, at full prices, viz. 70s to 80s per ton. In other kinds very little business is doing

Smithfield.—Although our market continues to be well supplied, the trade is firm, at full quotations.

Beef, from 3s 4d to 3s 10d; mutton, 3s 10d to 4s 4d; veal, 3s 8d to 4s 4d; pork, 3s 4d to 4s 10d per 8 lb. to sink the offals

Newgate and Leadenhall.—Prime beef and mutton move off steadily, at full prices. In other kinds the trade is dull, at very little change.

Beef, from 3s 0d to 3s 4d; mutton, 3s 6d to 3s 10d; veal, 3s 8d to 4s 0d; pork, 3s 4d to 4s 10d per 8lb, by the carcase

THE GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

PUBLIC TESTIMONIAL to H. STAUNTON, Esq.—The services which have for a long series of years been rendered by Mr. Staunton to the cause of Chess are generally known. His skill as a player has not only raised for himself a reputation that is European, but his labours have been extensively and kindly exerted for the instruction of those who ask it, and for the amusement of the public. In many cases where he would feel the gratitude of the public, it is by no means the least, that, by his instructive publications, both as an Editor and an Author, he has simplified the principles of the art, and invested it with popular interest to all. Mr. Staunton has expressed those games of chance which furnish the pernicious amusement of horse-shoe and low taverns. Chess is now a favourite relaxation among the leading mechanics. Clubs abound in the manufacturing districts.
Though these services have been notorious, they have not hitherto been publicly acknowledged. Several gentlemen will, known to Mr. Staunton, have proposed to supply the occasion by raising funds to present him with an appropriate testimonial. Those who are desirous of contributing to this object are requested to communicate their Names and Subscriptions to ROBERT LONGHURST, Esq., Caversham-square, Hon Secretary, or to any of the following gentlemen, who have consented to act as Committee:—
The Right Hon the Earl of Mexborough, Methley Park
The Right Hon Viscount Ranelagh, Nay Farr

London: published by G. ROWNEY and Co., 51, Rathbone-place.

PRESENTS FOR CHILDREN
Just out, Two choice Books for Children, uniform with "Peep of Day" and "Line upon Line," prettily illustrated with Engravings, attractive cloth, ornamental boards, price 2s 6d each,
EARLY DAW upon the TENDER PLANT; or, Easy Scripture Lessons for Young Children. With Questions and Answers upon each Lesson.
SOFT SHOWERS and SUNSHINE; OPENING BUD, or, Easy Scripture Lessons for the Young. With Practical Instruction
The above two books form a harmonised Gospel history in the very simplest manner for children. All the words are divided into syllables, to make them easier for the young. At the end of each lesson is a short comment of a practical and moral instruction. Questions and answers are also appended to the lessons.
The types are large, and clear, the printing excellent, and the paper good. The books are appropriately illustrated. They are also attractive from the cheapness of their price, as well as little presents, and are handsomely ornamented. Price only 2s 6d each
The books may be had bound and arranged as to allow equally well of their being sold together or separately.
London: WHITTAKER and Co; and Nisbet and Co

New Edition, containing the first-last and last Polka Mazurkas.

NEW EDUCATIONAL WORKS.
By ALEX KEITH JOHNSTON, F R S E, F R G S., F G S., &c.
On 31st January will be published,
A SCHOOL ATLAS of GENERAL and DESCRIPTIVE GEOGRAPHY, containing Astronomical, Physical, and Hortifacious, specially constructed with a view to the purposes of education, and on a uniform Series of Scales, by which the relative size of countries may be at once perceived. By ALEX. KEITH JOHNSTON, F.R.S.E., F.R.G.S., F.G.S., &c., Geographer in Ordinary to her Majesty for Scotland; Author of "The Physical Atlas," "The National Atlas," &c.

II
A SCHOOL ATLAS of PHYSICAL GEOGRAPHY; in which the subject is treated in a more simple and elementary manner than in the previous work. By ALEX. KEITH JOHNSTON, &c.
* * By means of a new process, these Works combine the accuracy of the finest line engraving, with the brilliant style of engraving, with a method of application of colours of which the effect is to secure a clearness, correctness, and expression hitherto unattained, and at the same time as moderate as those of any of the common Atlases now offered for sale. Specimens sheets may be had on application to the Publishers, and from any respectable Book seller.
EDINBURGH: WILLIAM and SON, Edinburgh and London.

APPROPRIATE GIFT BOOKS FOR CHRISTMAS.
With Six Illustrations. Second Edition, revised and enlarged. In 8vo, price 8s 6d, cloth,
THE BOTANIST'S and FLORIST'S LOOKER-OUT among the WILD FLOWERS of ENGLAND and WALES at all Seasons, and their Associations. By EDWIN LEES, F.L.S., &c.
"This is a new edition of a book, the first edition of which greatly delighted us. We took it as our guide in the discovery of those Wild Flowers which make our lanes and commons, our hedge rows and banks, so beautiful. Month by month we tested its information and found it in a very high degree accurate and useful. The author is a complete master of his subject, and communicates his knowledge in a genial, pleasant, and most attractive way. The present edition is much enlarged, and every way improved. We recommend the book heartily, and not from merely reading it, but from thorough knowledge of its contents, and experience of its general accuracy."—Gentleman's Magazine, August, 1851.
London: HAMILTON, ADAMS, and Co. Cirencester: Bally and Jones.

NEW MUSIC.

NEW SONG by ELIZA COOK.—DEAD LEAVES, a Ballad. The Words and Music by ELIZA COOK. Sent post free for 2s, by the Publisher, CHARLES COOK, 3, Raquet-court, Fleet-street, London. May be ordered of any Musicseller.

TRAIN up a CHILD, Sacred Song. The words from Holy Writ, the music by R TOPLIFF. Also, by the same composer, "I acknowledge my transgressions," "Pure religion" "Jacob's benediction," "Israel's guidance," and "Simeon's prophecy," being a series of Scripture melodies, the words from Holy Writ. Price 2s each, or the 6 for 10s. The band are arranged as vocal duets, and the second, fifth, and sixth for three voices Also, by the same composer, "Hark! is the Sabbath chime," all very beautiful sacred songs. Price 2s each, sent post free
J. WILLIAMS, 123, Cheapside.

THE SPIRIT of GOOD, Cavatina, written by E M SPENCER; composed by ALEXANDER LEE. Sung by Miss Poole at public concerts with the greatest applause. This is the last popular composition of the above-mentioned and lamented composer. Price 2s, sent post free. J WILLIAMS, 123, Cheapside.

HENRY FARMER'S CHRISTMAS QUADRILLES Bases of the 45th Thousand.—The cause of the great popularity of these quadrilles is that they are arranged on vocal (or small bands), their striking melody, and their brilliancy, and marked character for dancing. Price, Solos, 2s; Duets, 3s; sent post free.—J. WILLIAMS, 123, Cheapside

HERR KŒNIG'S NEW DRAWING-ROOM CORNET A PISTON, price £8 8s 0d, manufactured by the celebrated Antoine Courtois, Paris. This instrument is a new model, with moveable bell, and used by Herr Koenig at M Jullien's Concerts. The tone is full, brilliant, and pleasant, for the sweetness of its tone and the ease with which it is played, and is highly recommended to amateurs. Also for the use of Amateurs, for drawing room performances. Price, with case complete, £3 3s 0d. To be obtained only of JULLIEN and Co, sole agent for all instruments manufactured by the celebrated Antoine Courtois, of Paris. Lists of prices forwarded on application.—214, Regent-street.

LA PRIMA DONNA WALTZ, by JULLIEN. Illustrated with one of Baxter's Oil Paintings, beautifully executed by Brandard. Also, the Quadrilles, Polkas, and Operatic Selections at M. Jullien's Concerts. Postage free on application to JULLIEN and Co, 214, Regent-street.

D'ALBERT'S EDINBURGH QUADRILLE, price 3s.—Just published, the third edition of this the best quadrille on Scotch airs ever written
"D'ALBERT'S Edinburgh Quadrille is the best we have not been beckoned, and has nevertheless produced the most inspiring quadrille on Scotch airs we have yet seen: as a dance it is perfect, and musically it is unequalled."—Musical Review
Solos, 3s; Duets, 4s; full orchestral parts, 3s.
CHAPPELL, 50, New Bond street.

D'ALBERT'S FAUST and DEW-DROP WALTZES, performed with enormous success by Coote's band at Her Majesty's Ball at the grand Saxe Ball at Devonshire-house, and the previous
"These waltzes are perfectly different in style, but each a gem of its kind."
Price 4s solos and duets, full orchestral parts, 3s.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S NEWEST POLKAS, just published. The Bloomer Mania Polka, 2s 6d, the Kossuth Polka, 2s 6d; the Hyde Park Polka, 2s 6d; the Guards' Polka, 2s 6d; the Enfant Polka, 2s; the Enfant Polka, 3s. The above polkas are beautifully lustrated by Brandard, and promise to exceed in popularity all the celebrated works of this highly popular composer; also to be had as duets and for full orchestra.
CHAPPELL, New Bond-street.

M. D'ALBERT'S POPULAR MUSIC.—New editions, beautifully illustrated, of the following favourite quadrilles, Waltzes, &c.—The Charming Quadrille, the Fata Morgana Waltzes, or Shepherd's Dream, on Scotch airs; Grenada, on Spanish airs; Naples, on Neapolitan airs; Mabille Polka, 2s 6d; the Mabille Polka, 3s; Lionet Polka, 3s; Coquette, Ho ena, and Bridal Polkas, each 3s; the Fairest of the Fair Waltz, 4s; Star of the Night Waltz, 4s; Marguerite Waltz, 4s; Queen of the Quadrille, 4s; and the Grand Hungarian, or new Schottische, 2s 6d. "The above are the gems of M. D'Albert's composition."
CHAPPELL, 50, New Bond-street.

NOVELLO'S CHEAP MUSIC.—The general demand for cheap music, of a superior kind, having induced us to reduce the price of the many publications full 50 per cent., and the same scale has been adopted in pricing all the publications in future. Those already published at higher prices are marked in plain figures. Certain Musicsellers, in town and country, appear to think that the reduction we have made in prices interferes with their interests, not perceiving that an increased consumption must be the result, and is clearly to their profit, and they interfere in various ways to deprive the public of the benefit, by stating "Novello's Editions are out of print," and by selling the same publications at a higher price, and sometimes even by altering the Prices printed on my publications.
THE PUBLIC, FOR THEIR OWN PROTECTION,
Should therefore—
1st.—Insist on having "Novello's Publications," which are always in print, and can be obtained by every respectable Musicseller or Bookseller in the Kingdom.
2nd.—Compare the price they pay with the Catalogue prices.
3rd.—If other than Novello's Publications, address their order to
The Public s obedient Servant, J ALFRED NOVELLO,
Novello's Music Warehouse, 69, Dean-street, Soho, London.
Catalogue sent postage free for six postage stamps.

OH! CHARMING MAY. Composed by G. H ROWELL. Sung by all the public singers. This song, of which 20,000 copies have already been sold, is a most popular ballad for a tenor voice, and is published in two keys, and in a most beautiful manner. Price 2s. sent post free. Just published, Arrangements of the Air and Quadrille, by WILLIAMS, 123, Cheapside.

ILLUSTRATED MUSIC.—The PIANISTA SERIES, Nos. 1 to 144, and Nos. 145, 146, and 147, Polkas, Quadrilles, Waltzes, and Schottisches, with three illustrations to each No., coloured in the best style of the art. No. 140 contains the new Bridge Polka, and No. 141 the Bloomer Polka, each with a beautiful figure on costume. Price 2s, post-free 30 stamps, or the whole five Nos. sent free for 8s in one parcel, forming one of the most elegant Christmas presents ever produced.—PIANISTA OFFICES, 164, Argyll-street, Oxford-street, and 67, Cornhill.

London Warehouse, where stock is kept, 55, Wailing-street, seven doors from Queen-street, Cheapside.—Manager, Mr. JAMES ILIFFE.

THE REVOLUTION IN FRANCE.

NO. 16.—ARREST OF M. THIERS.

ARREST OF M. THIERS.

The residence, or hotel (as the Parisians style these fashionable residences), of M. Thiers is a villa, surrounded by railings with the usual gilt heads to the points. The soldiers in arresting M. Thiers did not enter the house, but remained in the street—they were the regular troops of the line; but the arrest was effected in the same manner as that of the African generals, namely, by *sergens de ville*, who wear long overcoats and cocked hats, with swords only, and no belt behind, and are employed in making criminal arrests, and in keeping order in the streets like our police. M. Thiers, it is stated, will now leave Paris as speedily as possible for Germany: he has long suffered from an affection of the larynx, and his sudden confinement in Mazas increased his complaint so strongly that the medical advisers recommended an immediate change of air.

ARREST OF GENERAL CHANGARNIER.

It has been remarked that the characters of the African generals were well illustrated in these recent arrests. General Bedeau, whose mind is stated to be of a wily, scheming, and "managing" order, entered into argument and discussion; insisted on considering the matter of his arrest in a variety of lights, for the improvement of his captors' minds; and finally arrayed himself in full uniform, in order to avail himself of whatever influence his *grande tenue* should chance to possess with those he might meet in his way. General Cavaignac, who was to have been married the next day, was probably, softened by this influential event, remarked on being arrested, "C'est juste." He only asked time to write to his lady-love, whom he chivalrously released from her promise, under the circumstances in which he was placed. The lady, to her honour, has replied, that the "arrest" was an additional attraction for him in her eyes. General Lamoricière made a most determined resistance, but was, of course, overpowered. General Changarnier was awakened in his bed by the officials, and as they called upon him to rise he sprang up, snatched up a brace of pistols, and exclaimed, "Je suis armé." The chief coolly replied that he saw such was the case, and that he was well aware Gen. Changarnier, by discharging his weapons, could kill a couple of those who had come to take him; but he suggested this course would scarcely be attended with appreciable advantages, inasmuch as the house was surrounded by soldiers, who would take summary vengeance for any death. Changarnier then submitted. He was arrested at his hotel, 3, Rue du Faubourg St. Honoré, by the *sergens de ville*. One of the Gardes Republicaines was in the room, with about twenty other officials, but no military. The *mouchards* were dressed in plain clothes. The soldiers of the line were in the street. The general, of course, was *en chemise*, but got out of bed and commenced dressing, after he had been warned by his porter that was to happen.

Perhaps a few details as to the outward appearance of Paris during these arrests, as far as they fell within the scope of one individual's observation, may not be uninteresting. "I was no sooner up (says the writer) at eight this morning, than our *concierge* told me the Place de la Concorde was full of troops. I proceeded immediately along the Boulevards to the Madeleine. Very few people were in the streets at that hour. The first thing which struck me was that the telegraphic wire which passes along the Boulevards communicating with the ministries and forts and the railways was cut. I saw a small post before the Ministry of Foreign Affairs. If any persons appeared on the balconies, they were instantly warned backed by sentries posted at the corners of the streets. When I reached the front of the Madeleine I found the Rue Royale regularly occupied with troops. I observed a strong post before No. 3, Rue du Faubourg St. Honoré, Changarnier's lodgings. The Rue du Faubourg St. Honoré was lined with troops as far as the Elysée. I passed without obstruction as far as the Place de la Concorde, which was occupied by troops, with their arms piled, and with cannon in the centre near the Obelisk.

"A regiment of lancers was drawn up along the quay towards Passy. No carriages were allowed to cross the bridge opposite the Assembly but I was allowed to cross on foot."

NO. 17.—ARREST OF GENERAL CHANGARNIER.

London: Printed and published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, December 13, 1851.

THE ILLUSTRATED LONDON NEWS

SUPPLEMENT

VOL. XIX.] FOR THE WEEK ENDING SATURDAY, DECEMBER 13, 1851. [GRATIS.

MUSIC AT HOME.

WE are not disposed to undervalue music—far from it. Music is an excellent thing, not only the source of one of our sweetest pleasures, but full of salutary and humanising influences. It has been given to mankind as a blessing, and as such ought to be received and appreciated. But, like every other blessing which we derive from the bounty of Heaven, it has been abused and perverted, till it has become (at least as generally cultivated in society) little more than an instrument of vanity and a means of frivolous display.

It is a branch of female education that music is chiefly abused in this manner. Gentlemen study and practise music as well as ladies; but it is something remarkable that gentlemen scarcely ever make such exhibitions of it as an accomplishment. In this [illegible] the [illegible] seems to be inverted. A lady, in a drawing-room, will sit down coolly to the piano, and entertain the company for half-an-hour with a dashing fantasia of Thalberg, or some of the other fashionable note-splitters of the day. But what would be thought of a gentleman-amateur who should stand up, violin in hand, to play a solo of Ernst or Sivori? Such an exhibition, certainly, we have never had the fortune to witness. But were it to take place, it is easy to suppose what comments it would give rise to. If—as it is a thousand to one he would do—he played very badly, scrambling, without tune or time, through the rapid flights, arpeggios, harmonies, and double stops, invented by the artist for his own especial bow and fingers, he would be unanimously voted a bore, and an impudent fellow. If he played tolerably—and it could be but tolerably at the best—

PART SINGING IN THE TIME OF ELIZABETH.—DRAWN BY G. THOMAS.

and contrived to get through without positively offending the ear, he would give no pleasure to a company, every one of whom had probably heard Ernst and Sivori themselves; and the best that would be thought of him would be that he played too well for a man who had his business to mind, and other things to think of. Such a feeling would be excited by such an exhibition, whatever were the station or fortune of the exhibitor. Every gentleman, however independent, ought to have pursuits and occupations too important to admit of his giving his days to the practice of a musical instrument. The unremitting labour necessary for the professional reputation of the artist, would, in the amateur, be mere waste of time in the indulgence of an idle propensity.

The same thing is the case with singing. A young lady, in every other respect sensible, modest, and retiring, sits down with out scruple to inflict upon a party of her friends and acquaintance a "grand scena" or an "aria di bravura," from Bellini or Donizetti; something which taxes all the vocal powers of Grisi or Sontag She cannot sing it—she screams and struggles through it in a way to excite ridicule or pity. But if she *could* sing it, she would be an object of greater pity still; for with what a cost of time and labour, with what a sacrifice of useful knowledge and acquirement, must her vocal proficiency have been attained! This, again, is not done by gentlemen. They learn to sing, and often sing very well; but we have no gentlemen Marios or Tamburinis in private society. Gentlemen take comparatively a small share in musical pastimes; but when they do, they generally confine themselves to what is fairly within the reach of an amateur. If they play, it is an accompaniment; if they sing, it is a song or a ballad, or they join in a duet, or a simple piece of concerted music.

This is one of the many consequences of the different education of the two sexes. Almost every girl is a musician, and makes a display of her musicianship. Most young men know nothing about music, but those who do, use their knowledge more discreetly.

Female education is more rational than it has been, but too large a proportion of it still consists of showy accomplishment. At boarding-schools, especially, young women, whatever may be their capacities or dispositions, are treated in one invariable way. They must all toil at the pianoforte so many hours a day; they must sing or scream their vocal scales and exercises; they must paint bright green and blue landscapes, or make copies of heads, finished off by their drawing-master; they must talk slip-slop French, and be perfect in the waltz and the polka; while their useful knowledge is gathered from the "Conversations" of Mrs. Marcet or Mrs Markham, learned by heart as tasks, and forgotten as soon as learned.

Into the routine of young men's education, music, in this country, does not enter. Those who learn it, do so of their own accord, because they have a taste for it and love it. They study it for its own sake, and practise it for the pleasure it gives them. Their number, however, though increasing, is still very small; and, taken as a body, the gentlemen of this country are more ignorant of music as an art than those of any other country in Europe. Were our young men regularly taught the rudiments, at least, of music, and enabled (if their taste and inclination led them to it) to read music at sight, and to make some use of their voice or of an instrument, a great number of them would retain through life an elegant and agreeable accomplishment. It would then be an accomplishment in the exercise of which the two sexes would join more than they do at present. The art itself would gain by this; in the hands of the women, it would become more simple, in those of the men, more refined; and, in partaking of the pleasure derived from music, both sexes would be led to seek it in the purest as well as the grandest forms of the art.

There have been times when music was much more cultivated as a social art than it is at present. In Italy, the cradle of the fine arts, and pre-eminently "the land of song," music was, at an early period, an essential accomplishment of both sexes. That this was the case may be gathered from innumerable passages in the old Italian authors. Petrarch's sonnets are full of allusions to music, and Laura's singing and playing is a frequent theme of his enthusiasm. He himself was a performer, and he left his "gentil lute" as a legacy to his friend Tommaso Bombasio, of Ferrara, "that he might play upon it, not for the vanity of a fleeting life, but to the praise and glory of the Eternal God." In one of his sonnets he speaks with rapture of Laura's singing in a company of ladies, and, in another, speaking of her vocal powers, he says—

> 'Fra possente
> Cantando d' acquetar gli sdegni ebbire,
> Di serenar la tempestosa mente,
> E sgombrar d'ogni nebbia oscura e vile.'

In the "Decameron" of Boccaccio, which is full of graphic pictures of the manners of his day, vocal and instrumental music is described as universal in elegant society. The party of ladies and gentlemen who flee from the horrors of the plague of Florence, and shutting themselves up in a country-house, endeavour to banish grief and fear by a life of mirth and amusement, are all musical. The daily pastime of story-telling is followed by music and dancing, and both ladies and gentlemen sing and play on the viol. At the end of the first day, for example, "after supper, the instruments were called in, when the queen of the day ordered that there should be a dance; and, after one had been led off by Lauretta, Emilia sang a song, in which she was accompanied by Dion on the lute."

Salvator Rosa was a most accomplished musician. He was a fine performer on the lute, and some of his vocal compositions, still extant, are among the most interesting musical relics of his time.

In this country music began early to hold a high place among elegant accomplishments. Chaucer makes men and women of all conditions singers and players on instruments. In the quaint old book, Peacham's "Complete Gentleman," music is dwelt on as an essential feature of the character. Shakspeare is full of beautiful allusions to the art, and to its general usage. They are to be found in every play.

The technicalities of musical harmony are used as familiar illustrations of the gravest subjects; as, in "Henry V.,"—

> "For government, though high, and low, and lower,
> Put into parts, doth keep in one concent,
> Congruing in a full and natural close,
> Like music."

In those days the lute and the viol were the principal instruments in use over all Europe. They were played by both sexes, and divided between them the supremacy afterwards acquired by the harpsichord, and now by the pianoforte. The lute, the favourite instrument of poetry and romance, was played like the modern guitar, but was a much larger and finer instrument. The viol was of different sizes, treble, tenor, and bass. In England, almost every family of consideration had a "chest of viols," a set of instruments which stood in the same relation to each other as the violin, tenor, and violoncello do now, and served to get up a domestic concert. The lute and the viol continued in use till the end of the seventeenth century.

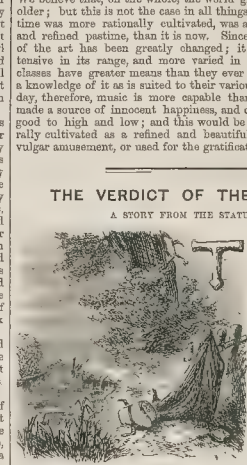
In the splendid era of Queen Elizabeth, music, of the most profound and learned kind, was universally cultivated among the educated classes. To sing in parts, or to take some instrument in concert, was regarded as essential to the character of a well-bred lady or gentleman. At a social meeting, everybody was expected, if called on, to take a share in the performance; and any one who declined on the score of inability was looked upon with some contempt, as low-bred and rude. Morley's famous treatise, the "Introduction to Practical Music," is prefaced by a dialogue between a young gentleman intending to learn music, and his friend. The young man relates a mortification which he had suffered at a party the preceding evening. "Supper being ended, part-books, according to the custom, being brought to the table, the mistress of the house presented me with a part, earnestly requesting me to sing; but when, after many excuses, I protested unfeignedly that I could not, every one began to wonder; one whispered to others, demanding how I was brought up. So that, upon shame of my ignorance, I go now to seek out mine old friend Master Gnorimus, to make myself his scholar."

Now these music-books, which were brought to the table after supper, and which every well-bred guest was expected to be able to read, are even now sealed books to all but educated and accomplished amateurs. They contained the madrigals and part songs of the great Italian masters of that age, Palestrina, Luca Marenzio, Stradella, Giovanni Croce, and of their English rivals, Wilbye, Bennet, Weelkes, Morley, Kirbye, and others, whose names, to this day, are among the most illustrious in the history of music, and whose works, like the sculpture of ancient Greece, are exquisite pieces of art, which modern artists have striven in vain to imitate and to equal. The best modern madrigal stands in the same relation to a madrigal of Marenzio or Wilbye as the finest modern statue to a masterpiece of Phidias. But the performance of this beautiful music was quite within the reach of the lady and gentleman amateurs of Queen Elizabeth's day. It required a good ear, a moderate skill in the management of the voice, a cultivated taste, and an acquaintance with the principles and practice of the art; things which (as experience showed) could be attained without any undue sacrifice of time and labour; while, for those powers of execution which must always distinguish the professional artist from the amateur, and which must be acquired and preserved by the undivided toil of a lifetime, there was no occasion.

We are no great sticklers for "the wisdom of our ancestors." We believe that, on the whole, the world grows wiser as it grows older; but this is not the case in all things. Music in the olden time was more rationally cultivated, was a more social, elegant, and refined pastime, than it is now. Since those days, the state of the art has been greatly changed; it has become more extensive in its range, and more varied in its objects; while all classes have greater means than they ever had of acquiring such a knowledge of it as is suited to their various conditions. In our day, therefore, music is more capable than it ever was of being made a source of innocent happiness, and consequently of moral good to high and low; and this would be the case were it generally cultivated as a refined and beautiful art, and not made a vulgar amusement, or used for the gratification of vanity.

THE VERDICT OF THE WORLD.

A STORY FROM THE STATUTES.



HERE is a happy, quiet village embosomed in the luxuriant foliage of a Kentish valley, not sixty miles from the smoke and din of London this village shall be known as Dewberry. The woful story that now clouds many a bright face there, must be told without dragging the sufferers into the glare of public curiosity: though it is well to publish the facts, a veil shall be thrown before the mourners—who ask but to grieve alone and unregarded.

In 184— Dewberry was a happy, prosperous spot. London was as strange a place to many of its inhabitants as Canton or Hyderabad. The seasons were marked by the bursting of the buds, the shooting corn, the ripened ears, the sunburnt apple, and autumn "laying, here and there, a fiery finger on the leaves," not by the closing of theatres, the breaking up of Parliament, or the opening of the Session. These latter events were not very interesting to people who seldom journeyed beyond the nearest market-town, and who were engrossed throughout the year in agricultural pursuits. The maidens of Dewberry ruled in the poultry-yard and the dairy; the men turned the fruitful soil to the sun, gathered in the ripened harvests, and wore out the short days of frost and snow on the threshing-floor. The tide of time ran on without a ripple.

To Dame Marsden was entrusted the task of educating the peasant children. At eight o'clock, daily, ruddy urchins, with polished cheeks, and dirty, well-thumbed books, lifted her latch and ranged themselves upon benches in her little parlour. Mary Marsden, more than her mother perhaps, contributed to the instruction of her little neighbours. Her learning, goodness to her mother, and charity to the poor, were constant themes of praise. Critically, she was not beautiful. Her nose was decidedly not Grecian—almost the reverse; her mouth was rather large; and her complexion was, beyond dispute, tarnished by the sun; yet from this homely face there beamed an expression—a soul that won more hearts than her neighbour, Miss Maxwell, with her finely cut mouth and exquisite nose, could boast of having enchained. Mary's face was a mirror—faithful to the last—of her heart. Not polished, in the drawing-room sense of the word, her manners were pleasing—too truly modest to be noticed for their modesty. In short, she was one of those warm-hearted, simple creatures, who are never intrusive in their goodness; but who are content to track "the even tenor of their way" without an eye to mark the sustaining virtue which guides and protects them. Thus Mary daily toiled through the alphabet with the rustic youth of Dewberry; was ready to be called to a neighbour's sick bed at any time; bore the temper of an erratic mother; entered into the little grievances of children, and interposed when the parental rod was about to fall upon a truant's back. She was not the belle of Dewberry—she was too quiet and unpretending for the office: but in the hearts of the old, rather than the young, she held her seat without knowing it. Her father had been dead many years; she had but the faintest memory of him. Of the world she knew nothing. If she believed in evil deeds, her belief was dimmed by the distance at which they ever appeared to be from her. In the people about her she had never met with instances of criminal behaviour; though many, of course, were only remarkable for that negative morality which keeps clear of the law. She had never fallen in love; for she had never met with a nature sufficiently refined, in the moral sense of the word, to awaken her heart from the peace of its daily beating.

In 184—, the date when her story opens, an unusual abundance of game attracted a party of sporting gentlemen to a shooting-box situated about a mile from Dewberry. Among these was a man of superior intelligence, whose frank and cordial greetings were gratefully welcomed by the village folk. His companions treated the villagers with disdain; this made his urbanity the more remarkable. He strolled about the village in the twilight; chatted with the farmers who assembled at the village inn; and told ghost stories to the peasant children. One afternoon he sauntered into the village school-room, and found Mary Marsden correcting the errors of incipient Cockers. His manner, when he addressed Mary, was polite—even deferential. He excused the liberty of his intrusion, patted some of the children, and begged leave to cross-question one or two of them. He made innumerable inquiries as to the rapidity of their progress; gave, apologetically, an opinion as to the best system of tuition; and, on taking his departure, very politely shook Mary's hand. The eyes that wandered after him as he passed through the garden-gate, had an unusual expression in them. Pausing here, the sentimentalist might pertinently write a disquisition, citing innumerable corroborative instances, on love at first sight. In the capacity of historian, however, it is only necessary to place facts logically—to hold the balance between truth and falsehood; therefore it may be declared, without preface, that the young sportsman made a particular impression upon poor Mary's heart, at once. His easy manners had effectually destroyed that sense of superior fortune which chills, in people of low degree, the sympathies which rise suddenly, and without bidding, between persons meeting for the first time. It was not love that she felt at first; it was only the tremor that marks its quickening. Had Robert Hassell never lifted her mother's latch again, Mary Marsden would have probably forgotten him in the course of a few months; but he came again and again. One day he brought a huge hummingtop for her first scholar; on another occasion he had plums to throw among the children for a scramble. Mary welcomed him each time with a satisfaction as frank as innocence. If he talked to her, it was only about her scholastic labours; if he still lingered after the children had left for their respective homes it was only to look over their copy books. Even the minutest details of the little village seminary interested him, and Dame Marsden was not a little proud of the gentleman's high flown compliments. He pronounced her homely teachings to be based on a profound knowledge of the infant mind; Mary's handwriting shamed Smart; and her definitions of words were infinitely more vivid than the lumbering explanations of Dr. Johnson. All this was said, and again and again repeated. There was not one touch of malice—not one glimmer of sarcasm perceptible in the words or expression of Robert Hassell. He was frankness itself. His learning was imparted without ostentation, as it was worn without pride. He talked always of elevating influences—of the subtle thoughts which give a keenness to the moral sense—of the harmonies of nature—of the things which humble arrogance to the dust. Mary listened, as the penitent to her priest. Had she read the mighty laws which rule the heavenly bodies? No. Step forth, then. The sun had passed below the horizon, and from the deepening blue the stars peeped forth one by one. The Milky Way crept like a silver film athwart the mystic dome; the moon peeped above a neighbouring hill. Robert Hassell read the glorious page with scientific precision, and with the music of a minstrel. The feet of the village maiden hardly pressed the sod. As the wondrous tale grew from the vivid brain of her companion, she crept unconsciously—but with the awful fascination that with a magnetic influence draws the pilgrim's feet to the edge of the precipice—nearer to her teacher. Still his solemn lesson went on, and she rose with him to heights which only the young and guileless dare. Every word penetrated her soul. To her he was a prophet;—she was in his leading-strings. Almost unconsciously, his hand enclosed hers, as they wandered back to the cottage: at the wicket he bade her adieu with a tender yet a solemn voice—but no word of love passed his lips. Mary walked into her home entranced. In a minute the quick, grey eye of her mother fixed its penetrating glance upon her. Mary awoke from her glorious dream—woke, and burst into a flood of tears.

"Mary, you have been a long time; neighbour Marshall tells me I had better look after you and that young man."

The fall was too sudden—too abrupt; Mary could make no reply. She felt that an infinite space separated her and her companion from the poor village people, among whom she was doomed to live; even her poor mother, on that night, was, to her, a common, narrow-minded, pitiable old woman. She was shocked at the coarseness of her neighbour's warning, as well as at the unconcern with which her mother repeated it. How little could they understand the sublime truths which formed the link—the only link of sympathy—between Robert Hassell and herself! What a vain task would it be to attempt any explanation!

"What have you been about, Mary? You look confused and stupid! Crazy like!"

Confused and stupid! She who had been lifted from the earth to look with rapture upon the machinery of the heavens—she who had never felt the purity of life before! How the grandeur of the scene was rolling away before the coarse human thoughts which were thrust in upon her! Yet the memory of his voice, the majesty (of her investiture) which encompassed his steps, the lofty purity which made her own innocence seem impure—how could these fade away!

Again he came—again he bade her penetrate the mysteries of nature. With him she learned the wondrous story that lay in every pebble at her feet; with him she unravelled the wondrous chemical machinery that pumped the sustaining juices from the bosom of the earth into the veins of plants. He talked of these things first, enchained her irrevocably; then, and only then, he faltered syllables of a human sympathy—spoke of love. The miser knew his wealth—knew that within his grasp lay a heart over which he was autocrat. He had but to command: his slave was ready. Dame Marsden heard the news of her daughter's betrothal with pride. Her child would be a lady. Robert Hassell's companions might laugh and point at Mary when they passed her gate, but soon she would be as good as the best of them. Let the truth be told of Mary. Here, while we may, let us mark the purity that elevated her love; the purity that made her defenceless. It was enough to know that Robert Hassell loved her; enough for her that in his noble heart she had a share. His superior fortune did not separate them; so united, so sympathetic were their aspirations. Did she wander about alone with him? This question was often asked by the prudent matrons of the village. Her virgin pride was a little wounded at this implied construction of the sentiments which existed between her and her lover. Still farther did she feel herself removed from her neighbours; she pitied their forlorn ignorance; she was sad when she thought that her good mother felt nothing of that grandeur which filled her soul. She clung more passionately to her teacher as the magic of his lessons fastened upon her soul. She entered into the heaven of her love with all the rapture of a novice. Persuaded that she was scouring, she followed, blindfold, the footsteps of her cherished guide. From the height to which he led her fevered imagination, he gradually began to point out to her the littleness of human dealings, the paltry considerations by which men were governed,—the slavery of custom in which people existed. He surveyed the dealings of his fellow-creatures, and contrasted their littleness with the grandeur of the spirituality to which he had raised her. And thus entranced, thus weaned from her peaceful home by the power of the very virtues which once adorned it, he led her, by the waves of his wand, to his lair.

* * * * *

To tell how, when she awoke from her dream, he soothed her troubled heart, how he allayed the wounds which gathered in her, how that potent spell which first lured her to the precipice was once more evoked to soothe the smarts of the fallen creature; how her mother came to comfort her and reprove him; how she believed his story and remained to soothe the pangs of his remorse; how she believed that, in the eye of her God she was his wife; how she clung to him, and dared the world,—still worshipping, with a woman's whole soul, the author of her shame; and how, at

last, maternal anguish was borne without a murmur.—would be to reiterate an old, old story, told again and again, in every journal that is laid upon the breakfast-table.

* * * * * *

A pale, poor creature is wandering near the little cottage—the old school of Dewberry. The windows are closed, not the faintest light streams from any casement. The old weather-cock creaks under the pressure of the wind; the moon is smeared at frequent intervals by the scudding clouds. The leaves of autumn rustle along the high-road. A year has elapsed since the shooting-party inhabited the box that can be faintly traced upon the brow of a neighbouring hill. In the eyes of the poor wasted creature, who is wandering fitfully about, there is a serene heavenly light, when they are raised heavenwards. With what a rapt expression is that pale face turned to the stars! What history can that poor creature read in the mystic highway? She is not in distress, for her face is calm as a child's in sleep: is it not calmer? Is there not in that bosom a heavenly hope—is there not in that fevered brain a resolution that has vanquished fear? What tempts so young a creature to brave the night, with a child in its earliest swaddling clothes? A pleasant river murmurs not far off; thither she is driven. By whom? The world must answer. A lingering look at the darkened cottage, a few steps, and the mother and child are—where? The statute-book will tell us.

* * * * * *

Solemn men gather about the door of the Dewberry Arms. There is not a smile upon the face of one of them. The parlour of the inn is arranged with scrupulous neatness; there is not a footprint upon its sanded floor. Presently, one or two country gentlemen arrive, call for a little brandy, and wonder how long they are likely to be detained.

"Rather a serious case, sir, I am told," said one gentleman, addressing a young man near him. "Yes, so I hear. It's hanged inconvenient for me—I was going to the Snobblebury Meet this morning."

"Ho! here 's the Coroner!" the first speaker interrupted.

The official in question jumped from his gig, and went direct to the parlour. Having gone through the usual preliminary formalities, he suggested that "the gentlemen of the jury" should at once proceed to view the bodies.

"It 's not far off, I hear," the official continued. "I'll ask where Mrs. Marsden's cottage is?"

Having received the necessary direction, the gentlemen, headed by the County Coroner, walked slowly down the High Street of Dewberry. There was a solemnity in the perfect stillness that reigned throughout the village. Every shutter was closed—every matron paused from her daily labours.

Dame Marsden's cottage, however, was the spot to which the grieving villagers plodded their way, to offer, in blunt and uncouth language, their sense of the loss which the poor old woman had sustained. In the village school-room lay the bodies of Mary Marsden and her child. There, in the scene of her daily labours—where she had endeavoured, to the best of her ability, to strengthen the moral sense of her neighbours' children—lay the tragic end of her own weakness. How those eyes are sunk! how the cheek is blanched and wrinkled! how the hand has faded to a trellis-work of bone and muscle! The child, with its pulpy lips, its dimpled arms, its cherub smile—type of its mother's youth—lies at the maternal side; defrauded—and by whom?—of its life, at the threshold of its existence.

With this hapless wreck the law proceeds to deal. Let us stand back, and learn the sentence to be pronounced upon Mary Marsden and her child. The Coroner, followed by the gentlemen of the jury, enter the village school-room, inquire whether there are any marks about the persons of either of the deceased; exclaim, "Poor things!" and retire to the village inn. From the jury-room the following report goes forth to the world:—

"Coroner's Inquest.—Mr. —, Coroner for the County, assembled a highly respectable jury at the Dewberry Arms, Dewberry, to inquire into the circumstances of the death of Mary Marsden and her child, who were found drowned, in the river, on the — instant. It appeared from the evidence of the young woman's mother, that her daughter had formed an attachment for a gentleman of fortune, who visited Dewberry last shooting season. Suddenly the young woman, who had previously borne an irreproachable character, disappeared from her home. It appeared that the gentleman who accompanied her (Robert Hassell, Esq., in the service of the East India Company) told her that he considered her as his wife, and that the only reason for his delay in taking her to the altar was that he feared the anger of his mother, from whom he had large expectations. After the birth of a child, however, the gentleman suddenly disappeared, and wrote a letter to the young woman, informing her that he was on his way to India, to join his regiment, and his wife. The evidence of various witnesses went to show that the young woman was in the habit of walking out with Mr. Hassell, after dark; that when last seen she was calm, and, to all appearances, was in the enjoyment of her reasoning faculties. Under these circumstances, the jury, after a short deliberation, returned a verdict of Wilful Murder of the child, and of Felo-de-se; and ordered the remains of the young woman to be interred at night, without the customary religious service."

How then stands the case between Mary Marsden, Robert Hassell, and the world? Robert Hassell is liable to be sued for damages, "for loss of service:" he pays the money, and is acquitted of his sin towards society. He is still "an officer and a gentleman." Had he robbed Mary Marsden of a penny-piece he would have been sentenced to a practical lesson in rotatory motion at a certain Brixton school; but, inasmuch as he robbed her of all that makes life estimable and honourable, he was, so the law tells us, indiscreet only, and must open his purse to the parents of his victim. Yet how great have the odds been, throughout, against poor Mary Marsden! All his learning—all the refinement with which it is possible to mask treachery—all the holy powers entrusted to man to win over and elevate woman—were brought to bear upon a sensitive creature, whose purity and sensibility made her only an apter victim. She falls! How stands her account with the world now? The scorn with which she is levelled to the dust is known too well. Her child—innocent as it came from the hand of God—is branded. On all sides she sees only averted faces. She has a heavy load of shame to bear. She is polluted—set aside from the immaculate society that shrinks from the contamination of her touch.

The inheritance of her babe is infamy; she bears the penalty of her frailty with a courageous heart awhile. The baby has its father's features—features dear to the mother even now. How mighty is the vengeance, and how irrevocable! See, she sinks beneath the withering touch of her immaculate fellow-creatures. She lives in so pure an age that she must not now raise her eyes from the ground; she is made at length to loathe herself. Her brain becomes disjointed. Surely there is more lenient judgment for her in another world. This thought fastens itself on her soul: it pervades her being—it follows her in her sleep. It conquers at last!

Yet the vengeance of the world does not die out with her death. That burning love, that made even the maniac mother clasp her child to her heart, and take it with her, in her fear of the shame to which the world had doomed it, is "Wilful Murder,"—her mad destruction, infamous!

The torch-bearers gather about her mother's home. They bear her body slowly, silently to its grave. That religion, the spirit of which is charity, forgiveness, and love, is not for her. Not only was her life judged, and her earthly career degraded, but twelve men declare that she is too lost to be prayed for. A Christian jury prejudges her before her God. Let not a clergyman commend her spirit to her Maker, for twelve country gentlemen know that the intercession is useless. As the world has tracked her with the scent of a bloodhound, so shall vengeance follow her hereafter.

Turning from this true history, how soothing is it to welcome the outpouring of a heart truly human—to follow pensively this Christian lesson:—

> "Cross her hands humbly,
> As if praying devoutly,
> Over her breast!
> Owning her weakness,
> Her evil behaviour,
> And leaving, with meekness,
> Her sins to her Saviour!"

And how shall it fare with Robert Hassell? He is on his way to India,—to a career of glory, to be closed, in due time, by an officiating priest. Well, will there not be, after all, more reason for prayer over the grave of Robert Hassell, than over the body of poor Mary Marsden?

W. B. J.

A SCENE FROM LONDON LIFE.

The wintry winds are blowing shrill, the rain-drops thickly fall,
And night upon the busy town has drawn his dismal pall
Through warmly curtain'd windows shine the cheerful Christmas fire;
All within is joy and comfort—all without is cold and mire.

As an angel doing deeds of good, that fire sends forth its ray
Into the cheerless stormy night, not to the tell-tale day,
For 'tis not in open sunshine, when Man stands by to see,
But in the silent darkness moves forth fair Charity.

And, see! below the window, list'ning the joy within,
With face so pale, so careworn, hovers the girl of sin!
Behind those flaunting robes of hers are want, and grief, and care,
And beneath that hollow, hideous laugh, a terrible despair!

She hears the voice of childhood—she remembers former days,
When, in her quiet village home, she joined in songs of praise;
When her thoughts were good and happy, and free from sin and guile,
And all were wont to greet her with an ever-present smile.

But now, in gaud and gewgaw, grown hateful to her eye,
For the bright and varied colours give to her pale face the lie,
She cowers beneath that window, uncared for, and unknown;
In want, and shame, and misery, her life wears out alone!

Sisters! that beam of light and warmth shone on her upturned face,—
And for a moment chased away her sorrow and disgrace;
Pliant and penitent she stood beneath its kindly glare,
And a gleam of better, happier, times illumined her despair!

Sisters of lowly mercy, go forth with faith and love;
Remember what ye cannot do, is done by Him above!
There are precious moments—many—when a kind word timely given
May win a soul from wickedness,—may win a soul for Heaven!

Go to the fetid alleys, where God's name has never reached;
Where His words of truth and mercy are seldom -never—preached;
Where want and direst poverty have taken up their stand;
Where, in all its hideous features, dwells the darkness of the land;

Where, crowded thick in cellars, is a mass of human life;
Where each daughter is a mother, where no mother is a wife;
Where light of day is never seen; where fever has its birth;
Where Plague and Pestilence stalk forth to thin the crowded earth!

To these dwellings, sisters, hasten, armed with food, kind words, and prayer,
Your kindly acts will banish sin, your gentle words despair;
Fewer then will pause to listen, fewer then will mourn the light
Streaming out from happy casements on some coming Christmas night!

Σ.

GYPSEY EXPERIENCES.

By a Roumany Rei.

He sketch and the lesson were going on rather irregularly, when a low whine of recognition from the dog, and the sound of voices, announced a new arrival. Looking up from my work, I saw a broad, swarthy, black-browed woman's face staring into the tent. Catching a sight of my drawing, the new comer—whom I rightly guessed to be the Aunt Athaliah of whom Sinfi had expressed some apprehension—burst out into a wild and incoherent gabble, half English, half Roumany, from which I could just make out that she was consigning me, and my work, and my poor little sitter to the most disagreeable places. Then stooping under the tent before I was aware, she clutched my sketch-book with one hand, and sent it spinning along the road, while with the other she seized poor Sinfi by the shoulder, and lugged her up, and out, through the straw and wood-ashes in front of the tent, shaking her violently and cursing her—"I'll *maur* (kill) you, you *chikli Beng's chavi* (dirty devil's daughter).—How dare you let a *gorja chiv* you *adra* his *lill* (how dare you let a man put you in his book), to *chave* the *rakt* of your *nuis* (to steal the blood from your face)?" All this was said with inconceivable rapidity and vehemence; and her assault had so astounded me, that, for an instant, I could neither avenge my outraged sketch book, nor go to the rescue of Sinfi, who offered no resistance to the cuffs and shakings of the redoubtable Athaliah. At last, however, gathering my scattered senses, and seizing the old lady by the shoulders, I whirled her round. "Hands off, you old fagot! By Jove! if you strike the girl again, I'll knock you down." She twisted in my hands, and foamed at the mouth, transforming her abuse from Sinfi to me.

"What 's the matter, you old fool?"

"I won't have her drawed out—I told her I'd make her scrawl the earth before me, if ever she let herself be drawed out again."

"Why, what harm can there be?"

"I know there 's a *fe* (a charm) in it. There was my youngest, that the *gorja* drawed out on Newmarket Heath, she never held her head up after, but wasted away, and died; and she 's buried in March churchyard."

"Nonsense, you old idiot! Anyhow, I won't let you touch the girl while I 'm here—so sit down quietly, and I'll draw *you* if you like."

She ground her teeth at me, but sat down, sulkily muttering, near the fireplace; while Sinfi, who did not appear much the worse for the *bourrade*, gathered sticks, and prepared to make a blaze.

"Take a cigar, old lady," I said, after a minute or two, handing her my case.

She took one ungraciously, lighted it with a lucifer match, of which she produced a box from her pocket, and began to puff—Sinfi looking up from her work now and then, with a sly smile at me, and a sort of wink in the direction of her aunt.

Tobacco is a great sedative, and before the first cigar was half smoked, Athaliah and I were as good friends as if our introduction had been the pleasantest one in the world.

Athaliah Shaw was about the ugliest Roumany I ever saw—standing close on six feet high, with a face like a vicious horse, and hair as coarse as his tail. She wore a long, bright, tartan shawl, draped awry, an old black straw bonnet on her head, with a green and yellow handkerchief under it, a rusty black dress, and boots like a navigator's. Uncle Euri, who came lounging up a few hundred yards behind her, with a couple of terriers at his heels, was a thickset, sturdy fellow, of six-and-forty, brown as a hazel-nut, with small black eyes, a coloured handkerchief loosely twisted round his bronzed throat, a fur cap on his head, a long calf skin sleeved waistcoat, loose drab breeches, and leggings half unbuttoned over his strong ankle-boots. He had looked on without interfering in the scuffle, and touched his hat civilly to me, as he sat down opposite to me on the other side of the fire place.

"The women don't like it, sir," he said apologetically. "I don't care about it; you may draw me out as much as you like for a pint of beer and a pipe of tobacco;" and with this philosophic remark he applied himself to his cutty with perfect composure, and great lazy enjoyment.

Meanwhile, stirring Sinfi had gathered sticks, and turned the hooked fire-rod round, and slung upon it a big black kettle, which stood, ready filled, under the shade of the hedge. Aunt Athaliah, much appeased, but still grumbling inwardly, like a volcano in the intervals of eruption, was taking out, from a sort of huge wallet (formed by doubling her stout apron and securing the corners to her waistband), a most miscellaneous collection of town purchases—lucifer matches, a quarter of a pound of tea in a paper, two quartern loaves, a lump of salt butter, a paper of moist sugar, some tobacco, a bunch of candles, and other things, which all reposed comfortably side by side in that capacious receptacle. Uncle Euri, meanwhile, had leisurely, and without rising, gathered a few handfuls of straw and small sticks into a hollow wisp, into which he thrust a lighted lucifer, and rapidly putting it down, disposed larger sticks about it, so as, in a few minutes, to have a good, well-piled fagot crackling and blazing under the pot.

The old woman and he exchanged some words in Gypsey with Sinfi. "*Muk* us *yukhar* the *rei* to *holl* a *crumer* of *hawben*" (Let us ask the gentleman to eat a bit of victuals).

Sinfi interpreted the invitation, "Uncle says, my *rei*, 'will you eat with the poor Roumany?'"

"Won't I, Sinfi? I'm desperately hungry, Aunt Athaliah, and I was going to ask myself, if you hadn't invited me."

"Eh! why, you 'll never *com* (like) the *moulo mass* (dead meat) that the Roumanies eat, my rei," said Uncle Euri, in their whining sing-song, full of *calinerie* and mock humility.

"I can eat anything," I answered.

"Can you eat *hotchwitchy* and *bourri-zimmins?*" asked Sinfi, laughing to her uncle over the potatoes she was peeling into a red earthenware dish.

"Talk English to the *rei*, Sinfi," said Uncle Euri.

"He wants to learn Roumany, uncle; look, he puts all the words you tell him down in his *ticknes lill* (little book) there—oh, so fast! and he learns them off directly."

"Ah!" said Euri, sententiously; "I've knowed *reis* as did that afore. There was young G——k, Athaliah; him that *jaed* to the *veligowris* (went to the fairs) with us for three months, and *kerred* the *bosh* and the *tambo* (played the fiddle and tambourine) like a *tatcho* (true) Roumany."

Athaliah shook her head. "He had *doster colas* in his *shurro* besides *jiwlas* (he had many things in his head besides lice). He *jinned* the *mulo Beng's hoknapans* (he knew the devil's tricks)—*he* did. Yes, my *rei*, he could make himself as big or as little as he liked, and he could raise the *Beng*, he told us; and often when he was *kerring* the *bosk* with my *rom*, there, in the *kellayen* (when he was playing the fiddle with my husband at the dance) he would laugh till he almost fell off the table. It was awful to hear him! Eh, Euri?"

Euri nodded a reverential assent. It was clear that poor C——k had left an enviable reputation behind him, among his Roumany friends. He was mad -poor fellow—but full of humour. Who is there of his standing at Cambridge that does not remember "Athanasius Gasker," and his museum, and the library of useless knowledge? And among his other eccentricities, I now learned for the first time that he was an *aficionado*, one of the Gypsey stricken.

"But what are we to have for dinner?" I asked; for Sinfi had put on the kettle, which was already simmering, and which, as she removed the lid to stir it carefully, I saw was full of a sort of white soup, with something in it that looked like oysters. "Deuced odd!" I thought to myself, "oyster-soup here!"

"It 's *bourri-zimmins*," said Sinfi, importantly; "but I won't tell you what that is till you 've eaten it."

"And where 's the *hotchwitchy* the *chukel* (dog) caught this morning?" asked Euri, getting up lazily.

"*Adri* the *vardo* (in the cart)," said Sinfi.

"What the deuce is a *hotchwitchy*?" I thought to myself, as Euri, arming himself with an old clothes brush, worn to the stump, lounged to the cart. He came back, and in his hand I saw a young, fresh-killed hedgehog.

"So that 's a *hotchwitchy*?"

"*Ourli*," said Sinfi.

"And do you mean to say you eat hedgehog?"

"Eat it!" said Euri, with a stare of surprise. "There ain't any game as runs or flies can beat it—that is, afore the winter—they 're thinnish now—but a fat un's as rich as pig, and as delicate as pheasant."

While he spoke, he commenced his cul[illegible] there is no receipt in Soyer, Ude, or Carême, for cooking a hedgehog, I feel it a duty to be minute in my description of the process.

Euri began by throwing his hedgehog on the ground; then, pressing his foot on the back, the body yielded, and from a ball grew a straight little cylinder of bristles. Throwing this on the fire, which had now burnt down to a clear red *braise*, he snatched it off again at a certain point of singeing—this point it is a very delicate matter to hit, mind—and applying his old clothes-brush to the smoking black stubble, speedily stripped poor p[illegible] the best part of his bristles, and ran a knife up the s[illegible]. Then taking a mass of stiff clay, which lay ready kneaded under the cart, he proceeded to invest the unseemly little body in a clay coffin, of about a quarter to half an inch th[illegible] this in the heat of the fire, gathered the red ashes about and over it. I watched with undisguised admiration, till Sinfi laughed again, and let her soup boil over, in her amusement at my interest in Euri's proceedings—which brought upon her a sharp rebuke from Aunt Athaliah, whose temper was not improved, as I now found, by a touch of rheumatism.

Meanwhile, plates, dishes, and porringers had been rummaged out, with an odd knife and fork or two, sundry battered iron spoons, some salt and pepper in a paper, and an elderly teapot (which Aunt Athaliah seemed to have under her special charge), flanked by a most miscellaneous array of cups and saucers. Sinfi was busy seasoning her soup, which really smelt uncommonly nice, though I was not at all easy about the ingredients.

"There, my *rei*," she said triumphantly, as she poured me out a basinful, and put it before me with a hunch of bread. "*Holl* that, and you can tell the *gorjas* you have eat *bourri-zimmins* with the poor Roumany."

I was uncommonly hungry, and the soup smelt so appetising, and Sinfi offered it me with so much grace, and such a triumphant twinkle of her black eyes, that I threw my misgivings overboard and fell to.

Bourri-zimmins, whatever it might be, w[illegible]decidedly a hit, rather like *soupe à la reine*, with little lumps of s[illegible]something I took to be a mild kind of forcemeat—decidedly they were *not* oysters—swimming in it. Sinfi looked at me inquiringly.

I nodded, "Capital, Sinfi."

She clapped her hands with glee. "Ho! ho! *Dik, bibbe* (look aunt); *dik, cokko* (look, uncle)—*D[illegible]* at the *rei holtin* the *bourri-zimmins!*"

What the deuce could *bourri-zimmins* be?

But Euri having also despatched his basinful, was now ex[illegible] his dirt pie [illegible] ashes. Holding it with a pair of smith's pincers, he broke the red-hot clay with a hammer, and neatly took off the crust, with bristles and skin embedded in it. In fact, the hedgehog was beautifully skinned, and baked to a turn, with all his gravy in. Then, with his knife, Euri opened the body along the chine, and, with one sweep of the hand, brought out the entrails, in a lump, by the back slit, which mode is resorted to, as he told me, because the gall-bladder is less likely to be broken than when the "giblets" are taken out by the belly. And now *hatchwitchy* was ready for eating, and really looked so plump and nice as he lay on the dish, bathed in his own coz[illegible] juices, and sent up such a grateful odour, that I got over any qualms I might have had, and played a worthy knife and fork with my new friends.

I have often eaten hedgehog since—and have served it at my own table, when it has been tasted and praised by my guests in blessed ignorance, for it really is capital eating when in season—but I never enjoyed one so much as this my first. You want to know what it is like? Imagine a blending of suck[illegible] and the bland unctuousness of the one mingling with the piquant game-flavour of the other, and you may form some notion of the taste of *hotchiwitchy*.

"[illegible]" said I, after I had put down my knife and [illegible] what is *bourri-zimmins*?"

"What do you think?" she said, swelling with the pleasant secret.

"I haven't a notion—but it [illegible] uncommonly good. Tell me what it is, there's a good girl. I'll give Hudson the receipt," I added to myself, "for the Trinity kitchen. Come, what is it, Sinfi?"

"Snail soup!"

"Snail-soup!" and I jumped up. "Confound it! you don't [illegible] I've been eating snail-[illegible]."

At that moment I could have boxed her ears, pretty as they were. I leave you to imagine my sensations. However, imagination apart, snails are very good eating, stewed in milk as Sinfi stewed them, with pepper, salt, and herbs. And though I don't mean to say I ever repeated the experiment, I have no doubt, if one *could* get over the fancy of the thing, snails would be as popular among us as oysters.

Dinner over, we sat and smoked, and I went on with my Roumany lesson. I don't think I quite enjoyed it as much with the old people as with Sinfi, and I am certain I didn't get on half so fast. However, they seemed pleased at the interest I took in their language; and Euri promised to pay me a visit at my rooms in college, and to give me a course of lessons, for the sum of half-a-crown per lesson.

Aunt Athaliah was an inveterate old *monger* (beggar); and it was only my solemn assurance that she would not get a penny by [illegible] that I made her [illegible] applications for *backsheesh*. In fact, the old woman was a bore and

"'*LEL THE TSHAR ARI*' SAID EURI TO HER. AT THIS ORDER SHE EXTINGUISHED THE EMBERS WITH WATER."—DRAWN BY F. W. TOPHAM.

but for Sinfi, I don't know that the acquaintance would have lasted beyond that day at the King's Hedges. However, it was not destined to close so soon—in fact it still subsists. I saw Sinfi only last summer near Margate, under rather curious circumstances, as I may hereafter have to tell.

I was not at all prepared for the interruption that brought my lesson to an abrupt close on that day.

I have mentioned the names of Florentia and Morella, Sinfi's cousins, who shared her tent.

After dinner, Euri and Athaliah fell into a talk, carried on almost entirely in Roumany; which I concluded, therefore, they did not wish me to understand.

I had no objection whatever to a *tête-à-tête* with Sinfi. I have not known many of the Roumany *chais* (Gypsey girls) who were agreeable companions in a two-handed talk. Either they are intolerably rapacious, asking for everything that pleases them, or grossly and tiresomely *soft-sawderish*, or pruriently coarse. Sinfi had none of these faults, but was really frank, [illegible], and natural in her questions and answers, as limber and graceful as a lizard in her movement, piquant in the little touches of [illegible] that crossed her Oriental and lazy courtesy of manner. She was certainly not only the prettiest, but the most attractive young Gypsey I have ever known.

I can quite conceive the mad p[illegible]sion that such a creature may create in a man, and has created, in our own times too. We need not go back to Spain, and the days of Cervantes, to find a Preciosa. Not a few Oxford-men, of nine or ten years' standing, could tell a tale of frantic passion for a Gypsey girl entertained by two young men at one time, one of them with ducal blood in his veins, who ultimately wooed and wedded his Gypsey love. So that it is in no way impossible (the heirs to the dukedom being all unmarried, and unlikely to marry) that the ducal coronet of —— may come to be worn by the son of a Gypsey mother.

Our *tête-à-tête* might have lasted an hour, and the sun was on the rim of the horizon, when Euri who had walked more than once to the end of the green lane, and restlessly looked north and south, and east and west, as if in expectation of an arrival—suddenly jumped up, and touching Athaliah's arm, directed her attention to two young women, whom I now saw coming rapidly towards us across the common which I had been traversing when the smoke of the camp attracted my attention.

"It's Florentia and Morella," said Sinfi to me.

As they came nearer, I saw by their flushed faces and rapid breathing that they had walked fast and far. They were lusty lasses, of about Sinfi's age, but coarser of feature and bigger limbed than she was; dressed, *en reste*, much in the same fashion.

They waved their hands as they came near, and called loudly some words in Roumany. All I could distinguish was, "*Bori Hokani.*" When I asked Sinfi the meaning of these words, I observed Euri frown at her. She avoided answering. There was clearly some mystery that I was not to be initiated into.

The girls had now reached us. They did not address any words to me; but it was evident from the looks they threw in my direction, as they talked earnestly and apart with Euri and Athaliah, that my presence was unwelcome. I observed, too, that one of them hurriedly transferred to Euri a small but heavy packet, which that worthy consigned straightway to his pocket.

It needed all Sinfi's control of herself to keep her from leaving her seat near me at the fire, and joining her cousins. Seeing this, I was just about to take my leave, when Euri anticipated me.

Holding out his hand, he gave me the Roumany farewell, "*Cushgar bok* (good luck), my *rei*; we are going to strike the *rangeh* (tent-sticks.) Clap the *sallivandras* (saddle) on the *grei* (horse), Florentia."

"What! going to night?" I said to Sinfi. Euri answered for her.

"Yes, we shall be a good many *stretch* (miles) away before this time to-morrow."

"And my Roumany l[illegible]"

"Next time we come this way, sir; we take the King's Hedges in our beat; it's one of the best *conacs* (camping [illegible]) in the county. Now my *chais* (girls), *had, had* (lift, lift, [illegible] and while he spoke, he had already str[illegible]pped the blankets off the tent-sticks, while Aunt Athaliah was busy in stowing away pots, pans, and tea-things in the large covered baskets, flat on the inside, and curved on the outside, for slinging on the asses, whose foot-ropes Morella was untying, while her sister saddled the horse, and Sinfi packed the straw into a bundle with the bedding.

"*Let* the *tshar ari*" (take away the ashes), said Euri to her. At this order she extinguished the embers with water; then, collecting the ashes in her apron, she began strewing them thinly in the thickest part of the bushes and on the flat beyond, so that very soon, except the blackened circle on the sward, no trace of fire was visible. In the few minutes that I stood there, it was wonderful to see what a clear sweep of all vestiges of the camp had been made by the united efforts of the family.

I lingered still, in the hope of a farewell from Sinfi. I was not disappointed. After she had shaken the last of the grey ashes from her apron, she came to where I stood, and gave me her hand.

"*Cushgar bok*, my *rei*. Wherever you go, you won't forget Sinfi?"

"And you won't forget me, Sinfi."

"No! I shall always think of you when I wear your *diklo*."

"But why are you off in such a hurry?"

She shook her head.

"Where shall I find you to-morrow?"

"*Ko jin?*" (who knows?) she said, with a shade of gravity upon her face; "but we shall see each other again, my *rei*; and mind, the next time, you must know how to *rokker* (speak) Roumany like uncle Euri yonder."

A whistle from the camp recalled her. I saw the horse was in the cart, the panniers and tent-sticks p[illegible] the [illegible].

"Good-bye, Sinfi." I still held her hand.

"*Cushgar divus* (good day), my *rei*." With these words she drew her fingers sharply through mine, and ran like a deer towards the camp. When I looked again the little caravan was in motion.

THE ORDER OF THE BEE:

WITH SOMETHING OF ORDERS IN GENERAL.

It is allowed on all hands that we want a Civil Order of Merit—something altogether distinct from the Red and Black Eagles, and Swords and Saints; the last, by the way, of various reputations. An Order of Civil Merit! We therefore propose for the courteous consideration of Her Majesty, The Order of the Bee.

Orders have been called the cheap defence of nations. There is, it seems, a wonderful power in a bit of ribbon; magic in the web of it. Abroad there are civil distinctions; in England we have no ornamental mark for pacific genius. We give a St. George or a St. Patrick to a Duke or a Lord-Lieutenant; but we have nothing for a Robert Stephenson; and a Joseph Paxton must go undecorated.

Heraldic enthusiasm points to Holy Writ as the original source of armorial bearings. Jacob is called the first herald. It was the patriarch who gave blazonry to the twelve tribes. Judah has a lion; Dan a serpent; Nepthali a hind; Benjamin a wolf; and "Joseph is a fruitful bough; even a fruitful bough by a well." This is averred; but Sir Thomas Browne has learned misgivings. "Now herein," he says, "although we allow a considerable measure of truth, yet whether, as they are usually described, these were the proper cognizances and coat-arms of the tribes; whether in this manner applied, and upon the grounds presumed, material doubts remain."

Any way, the significance of orders admitted and approved—wherefore should statesmen and men-of-arms alone be decorated? Why should a Lord Chamberlain take fellowship with St. George—a General carry off the Golden Fleece—and the poet, the sculptor, the musician, the engineer—the very men to whom an educated world, refined and educated by their means, appears more and more willing to acknowledge the debt—be wholly uncompensed? Let philosophy declare all decoration to be mere weakness; it is, nevertheless, a weakness universal as humanity. The New Zealand chief, with his curves and bars in tattoo, forces companionship with Gold or Silver Stick starred and gartered.

Civil Merit, it is declared, cries aloud for decoration of some sort; desires and demands to have something to itself—some sign or type of its usefulness; not clamouring for a lion, or an eagle, or any ferocious, carnivorous presence; but for something innocent, and wisely utilitarian. Can Civil Merit, then, have a better order than the Order of the Bee? Can there be a better time for its institution than the time 1851? Can we have a wiser, gentler foundress than our gracious Queen Bee, Queen Victoria? And the Bee boasts as high antiquity, and surely a nobler first use than either lion or eagle. For the Bee sang its song and made honey in Paradise, when as yet the lion had not fleshed his tooth in the lamb, or the eagle pounced upon the kid. What says the poet of the Bee? Is it not—

"——— of ancestry
Mysteriously remote and high;
High as the imperial front of man;
The roseate bloom on woman's cheek;
The soaring eagle's curved beak;
The white plumes of the floating swan;
Old as the tiger's paw, the lion's mane.
Ere stricken by that mood of stern disdain
At which the desert trembles."

Moreover, we think we can make out a tolerably fair claim for the Bee, even when entertained with the relative merits of other animals, of things and sentiments that have hitherto found favour at the hands of heralds.

The "Order of the Garter" has St. George, a most worthy saint, to protect it; but whether the St. George dear to Englishmen was a martyr of Cappadocia, or whether a born Briton, which is received as the more agreeable belief, it matters not. St. George killed a dragon,—a dragon in the real flesh and scales, say some; dragons metaphorical, namely abuses and injuries, say others. Any way, let the Garter still honour nobility; the modern noble being handsomely received as the champion of the weak and lowly, even as was the ancient draconicide.

The "Order of St Patrick" is also an excellent order, a very fitting reward for those patriotic nobles who, like the saint himself, do their best to drive the snakes and creeping things of faction out of the land, making it a place of fruitfulness and innocence. Let there still be St. Patrick for men like these, and may the Chapter boast a legion of them!

The "Order of the Thistle" is full of significance. We who advocate the Bee can scarcely fail to praise such a type; for, like patience from sharp-pointed suffering, does not the Bee get honey from the Thistle? Therefore, for strong, valorous-hearted Scotch nobles—who keep their glens open as their souls—let the Thistle ever bloom in the garden of the herald. And so much for the orders whereof our Sovereign Lady the Queen is head and patroness.

If, however, we look abroad, there is no order more significant in its meaning, more honourable in its expression, than an Order of the Bee. Austria, of course, has orders of all sorts; Austrian and Italian, of meaning and no meaning. There is the "Order of St. Stephen," who a battle won upon his festival; the saint, no doubt, taking a very active part in the engagement, was honoured with a gold chain, a star of eight points, and a crimson watered ribbon. The "Order of Maria Theresa" was an order instituted by the Empress; and, certainly, with more meaning in it than was the "Order of St. Gerion," who is said to have suffered martyrdom about a thousand years ago, but whose order has since burnt out. The "Order of the Blood of Our Saviour" was instituted from the "fact" that three drops of holy blood were in the possession of the monks of St. Andrew, Mantua; an historic fact that we leave to the earnest elucidation of Dr. Newman. We hear nothing in our day of the "Order of Ladies, Slaves to Virtue;" nevertheless, Leonora, widow of the Emperor Ferdinand III., instituted the order, making herself Sovereign Lady Slave of Goodness. The order is, we fear, extinct; but then, might it not be revived? To be sure, the self-sacrificing spirit of our time inevitably makes slaves to virtue; the bondswomen wearing the order unseen in their bosoms, and not outside "pendent at the breast to a small chain of gold, or a plain, narrow black ribbon." A beautiful intention lives in the "Order of Neighbourly Love," it is an *order* that might hang at the button—if he had one—of a Quaker! This order was instituted by the Empress Elizabeth, at Vienna, in 1708, an order for both sexes of noble families. The cross has a pretty motto—*Amor Proximi*. The "Order of Neighbourly Love!" How excellent if all the monarchs of the world would join the Chapter, making their ministers and generals knights, and emblazoning the golden cross and motto on their palace walls, and in their military flags! There was an "Order of the Swan," but this is nine thousand years ago. Nevertheless, it might be revived as a good poetic decoration.

Denmark has a wise and noble order in the "Order of the Elephant." This order, above any other, approaches in significance and beauty our meditated Order of the Bee. Wisdom and power are admirably typified in the elephant; as industry, and cheerfulness, and instinct—marvellously touched to beautiful results—meet in the Bee. Assuredly the Elephant, with his castle on his back, is almost as noble a bearing as the Bee, with "honied thigh." Nevertheless, the Elephant may be made a minister of war; he may be harnessed to cannon, and carry a fighting host upon his back; hence, noble and sagacious as is Sultan Elephant, he must even yield—yes, bend his mighty joints—in homage to our little Labourer Bee.

France twinkles all over with stars and orders; some of them putting forth, as it appears to us, an unseemly familiarity with sacred things: hence, we eschew many of them. One only will we speak of: the "Order of the Holy Phial;" an order consisting of poor persons, *Barons de la Sainte Ampouille;* the said vessel being supposed, that is believed, to contain the Holy Oil celestially vouchsafed for the anointing of the Kings of France, when they reigned by Divine Right; a right a little sharply questioned, and at the present time—although the Count Chambord may think otherwise—in far abeyance. The "Order of the Brown Flower," instituted by Louis—known as St. Louis, in token of his humility—soon fell into disrepute; and is now a dead, withered thing: and his "Order of the Ship" is sunk unfathomably deep in the tide of time. There was an order, the "Order of the Porcupine:" the quills were few and weak; and the porcupine became defunct after the death of Louis XII.: a great pity, as Voltaire ought to have been the Grand Master symbolically, as he was really. Old travellers tell of lions shot through, exanimate, with porcupines' quills in their hearts: the quills of Voltaire made sore punctures in the vitals of Divine Right, and ampouille-anointed legitimacy. The "Order of the Dog and Cock" dates from the sixth century; an order that for awhile did honour to King Clovis; but dog and cock have long since been nought: the dog a "dumb dog;" and the cock off his perch.

Germany has, among other odd insignia, the "Order of Death's Head." A most moral order! Women only are received into it; virtue and merit, not birth, being the only necessary qualifications. A beautiful order! Gaming, theatrical amusements, and luxuries of all kinds (fine clothes, of course, included) are prohibited, and punished by a fine; which, on Good Fridays, is given to the poor. Does the order flourish at this time? We fear not. There was the "Order of Fools;" instituted in 1380 by the Duke of Cleves; a sincere, truth-telling order—as it would seem, too simple and veracious to hurt. It consisted of thirty-six knights—select fools in that day; who wore a badge, which "was the figure of a man habited like a fool, in a short waistcoat, a coat of red and yellow patchwork, with morrice-bells of gold, yellow-stockings, and black shoes, holding in his hand a bowl filled with fruit." A good type, the fruit, of the worth and sweetness of a wise folly.

Holland does not shine in orders; it has the "Order of St. James in Holland;" a poor, unknown order. It might have had, say, and have, the "Order of the Stork:" otherwise gratefully remembered and kindly protected by the dam-making Dutch.

Naples has, of course, the "Order of St. Januarius;" an order that *ought* to liquefy and run upon the Saint's day, to keep in countenance the saintship. The "Order of the Ermine" a beautiful device!—lasted but a short while. "The collar was of gold, intermixed with mud, to which hung an ermine, with this motto, *Malo mori, quam fœdari;* I had rather die than be polluted." And, somehow, the Ermine had a short life of it in Naples.

Portugal had the "Order of the Wing of St. Michael," in gratitude to the saint, who appeared fighting on the right wing of Alphonso, in 1172, in his battle with the Moors; the wing, however, soon moulted every feather.

We might still run through a hundred orders, yet should we despair to find any order more significant of its purpose than our suggested Order of the Bee, as an order of Civil Merit. There might, too, be various degrees of decorations: the Bee in diamonds, the Bee in topazes, the Bee in amber, the Bee in gold, the Bee in silver, the Bee in iron; all the Bees making only one glorious swarm, with our good Queen Bee—Queen Victoria, the Regina Regnant of the Hive.

D. J.

THE BURDEN OF MAN'S EXISTENCE; OR, LADIES' LUGGAGE.

BY A BACHELOR OF FIFTEEN STONE.

A lover of my species, and especially of the fairer portion of it, I am, nevertheless, single. In youth I was too poor for matrimony: in middle-age I am too fat. I might marry some woman of my size, perhaps, and we should make a pretty pair of turtles—of the kind that do not coo. I had rather not. Youth and beauty for my money; but youth and beauty with what money will not buy—affection. Love towards a man of my bulk, is impossible. I can exert no attraction but that of gravitation. The best I could expect, as a suitor, would be to inspire sincere esteem—accompanied by compassionate ridicule. Ugly, ludicrous men—whatever may be their intellectual or moral recommendations—should remain bachelors. Socrates married:—his wife was Xantippe. Gentlemen of my years and circumference had better rest content with celibacy; accept the situation, as the phrase now is.

I feel my exclusion from domestic happiness. It seems hard to be denied the blessings of a home and a pleasant wife. The soul is not deprived of its aspirations by imprisonment in a mountain of flesh. Oppressed with adipose substance, the heart may, nevertheless, throb with the fondest emotion. Yet I can behold a happy pair with feelings untinctured by malicious envy. Such a spectacle I contemplate, not as Milton represents the lost Archangel, surveying the endearments of the first married couple. No, I look upon it rather like the Peri gazing at the gate of Paradise—little as I may appear to resemble a Peri. The sight is a pleasure to me, though a mournful one. And I must say that I do not have that pleasure too often. In this world of annoyances and irritations there are many interferences with domestic bliss. Doctors' bills, wet-nurses, and all that unpleasant sort of thing; hooping-cough, measles, vaccination, teething, schooling-expenses, and the plague of servants, are evils more or less inevitable in married life. But there are some that might be avoided. I wish I could prevent them. It is true that the troubles of wedlock help to reconcile me to my lot. Doomed as I am to an existence of buttonless wristbands and blighted affections; condemned to smooth my own pillow, shake up my own physic, make my own tea, whisper words of encouragement under misfortune (as well as I am able) in my own ear, and have my joys and my sorrows all to myself, I derive comfort from the reflection that—to invert the saying of Dr. Johnson—if celibacy has few pleasures, matrimony has many pains. Yet I would do anything in my power to diminish those pains. I might do something to that end if married folks would take my advice. If husbands would only be more careful in their conduct, they

"SUCH IS A TOO FAITHFUL AND FAMILIAR PORTRAIT OF A WOMAN AS SHE APPEARS IN THE WAITING-ROOM."

would remove many, very many, of the sources of conjugal unhappiness. I must, however, say, that observation has convinced me that there certainly are some drawbacks on matrimonial felicity, for which the ladies are responsible—if I may use so strong an expression.

The disinterestedness and self-devotion of the female sex are indubitable; as much so as the fidelity and sagacity of the canine species. No object in the world is so interesting and amiable as woman at the couch of sickness, at the cradle of infancy, or imparting material sustenance to the babe at her bosom, or the first elements of mental nourishment to the child at her knee. Delightful, charming, captivating to behold, is woman gyrating in the many dance, or running over the ivory keys—at the piano, or in the polka. Dignified is her attitude in discharging the duties of life, elegant her aspect in contributing to its pleasures. But it cannot be denied that there are some few scenes and situations in which woman does not show to equal advantage; wherein she appears neither as useful nor as ornamental. For example, she does not present a pleasing picture at a railway station, seated by a mountain of trunks, portmanteaus, bandboxes, hampers, baskets, parcels, bundles, and sundries, generally inclusive of an umbrella and a pair of clogs; perhaps, also, of a bird-cage and a barrel of oysters, together with a camp-stool and a jar of pickles; whereunto may probably be added a set of fire-irons and a goose.

Such is a too faithful and familiar portrait of a woman as she appears in the waiting-room—the time up, the passenger impatient, and the guard rushing in frantically, to hurry her to the train just starting.

Woman was formed to be the companion of man, his travelling companion, as well as his ordinary associate. Indeed, he can not have a more pleasant one on a journey, personally considered. What a pity, then, it is that she will, in most cases, so perseveringly endeavour to frustrate the design of Nature by rendering her companionship as his fellow-traveller an infliction and a bore, in entailing on him the plague of that warehouseful of luggage and furniture which she must needs drag about after her wherever she goes! Her smiles, her lively prattle, her beaming looks, are calculated to enliven the journey; but their influence is lost on the unfortunate man who is thinking on the bonnet-box or chest of drawers which he fears has been left behind at the terminus.

The care of bales and packages, the solicitude for cargoes of goods and chattels, unnecessarily and inconsiderately imposed upon a husband, is most trying to his temper; and the repetition of this annoyance gradually spoils it, and renders him at last, perhaps, the brute that he is too frequently, and truly, called. The soul of man tends constantly to soar. It is maddening to be arrested in our lark-like ascent by the check-string of some mean anxiety: to be dragged down to earth, as it were, by the cord of a clothes box. Yet, thus worried and fretted, the male partner in the travelling firm is frequently, in addition to his mental burdens, saddled with a work basket, or a knitting-frame, or a baby, and expected to smuggle a cur under his over-coat into the bargain.

Great, doubtless, is the pleasure of a wife's society on an excursion. Ladies, perhaps, do not know how highly it is prized. They would understand this if they knew what the gratification costs. It costs generally an extra charge for over-weight of luggage. It costs a double fare to every cabman or fly driver employed in the course of the journey, besides the endurance of insolence, in the greater number of instances. It continually causes loss of time, through arriving too late for coach or train. It involves perpetual wrangles, disputes, and altercations with guards and porters. It often necessitates, at every fresh station, the trouble of getting out of the carriage, at the risk of being left behind, to see that this or that chest, or package, stowed away apart, is not carried off by some branch train. Owing to the neglect of this precaution, it occasions the delay of hours, or days, at stations or hotels, for the recovery of the missing article, or, more probably, for the assurance that it has been lost. And all this misery she, who would not injure a worm, inflicts on the man who loves her, but whose love—alas! is soon lost in his vexation and annoyance. Of course she does not know the pain she gives. She throws her luggage on her husband as a child puts his foot on a beetle. She hears not—I hope, at least, she never hears—the execrations of the sufferer, who is agonising under that *peine forte et dure;* for when a man wishes a nuisance at the deuce, his wish, at the moment, cannot but, to a certain extent, relate to the cause of it.

Marriage is often embittered from its very outset by this plague of luggage. The beginning of discord dates from the termination of the wedding-breakfast. I was present at my friend Bradshaw's. I saw the "happy pair" start for the seaside. The vehicle which Bradshaw had provided would not contain the pile of moveables which the bride had heaped together to take with her. A small cart had to be loaded for the purpose; and Bradshaw drove off, with the cart following him, amidst the hurrahs of the multitude. I know the Bradshaws quarrelled in their honey moon; and, I believe, in the first quarter of it.

Could no appurtenance be invented for the female traveller analogous to the carpet bag? Can a lady make no arrangement for managing on a journey, or a visit, to do with less than an entire wardrobe? Is there no such thing possible as compact stowage in the case of feminine vesture? Must there necessarily be a locker for each gown; as many chests as caps; and a band box for every individual bonnet? Might not a folding bonnet be devised? Was there no such thing in the Great Exhibition? It would be a real blessing to husbands.

I would strongly impress it on the female reader, that baggage, in the battle of life, is as great a hindrance as it is in real warfare. The old Romans actually called it *impedimenta*, encumbrances; the very word now used to denote a wife and family, principally, no doubt, on account of the lading with which a married man is supposed liable to be hampered. It is said that there once existed a race of female warriors, the Amazons; this is a fable; the baggage of the troops would have made any military operations impossible.

I sometimes think ladies may labour under a mistaken notion, that, because mankind delights in attending upon them with all reasonable service, therefore, the more labour they occasion, the greater pleasure they confer. This would be an amiable motive for their overloading porters, carriages, and their own helpmates. It would, however, be a very mistaken one; and the sooner it is abandoned the better. They should also be undeceived of the idea that, because men, to a certain extent, like waiting upon them, men like to be kept waiting for them so long as to miss the overture, or the omnibus.

On the heart, which is the abode of maternal love, of sensibility, compassion, delicacy, and so many other fine feelings, I wish I could imprint one maxim—"Punctuality is the soul of business." To that heart I appeal—not for myself—for my fellow men. I would tell it, that punctuality and encumbrance are incompatible. And, oh! I would exclaim, ye who do so much to lighten the cares of man's existence—cease, cease to augment their weight by an intolerable burden of luggage!

ART IN THE BYEWAYS.

Proceeding on our way, we halt before another rude art pursued in the bye-ways of London and provincial towns—that of profile cutting. With a pair of scissors, some black and white paper, and a little bronze, the expert artist starts on his tour. He praises children, and assures their mother that they will "take beautifully, and forthwith he draws out his sheet of black paper, and, by a series of dexterous turns, produces the fair outline of a child. To its costume, he usually adds a flowing sash, and other ornaments, and persuades the mother to have the lights touched in with bronze, for which process he makes an additional charge. The black outline is pasted upon a sheet of white paper, and the family portrait of the mechanic is ready to be framed. These rude outlines are to be seen in the homes of the working-classes—they are only so many instances of the wish to preserve likenesses of husbands, wives, and children—a wish that is founded on a noble human sentiment, and may, we hope, ere long, be more effectually fulfilled. The day may not be far distant when the camera-obscura will reflect the fine features of peasant mothers and children.

Art in the byeways has yet other developments. Even in the toys offered to children we may make notes of an onward movement. Of late, the rude and ugly dolls of the orthodox nursery fashion have given place, in the streets at least, to little waxen images, artistically moulded, and clothed in white woollen garments. The wax, it is true, has a strong odour of tallow, and will hardly bear the pressure of a child's embrace; but then the toy bears some relation to the rules of art. And now we may notice the artist who paints upon the pavement; and, with a meek expression, sits beside his work to receive the pence of the crowd that gathers about it. Reviewed strictly as an object of art, how detestable is the performance! yet, regarded as a specimen of imitation achieved by a poor, uneducated creature, it is worth notice. The head of the Saviour is the subject the flag-stone artist generally selects. The attitude is that of suffering; the crown of thorns is upon the Saviour's brow; and rays of bright colour serve as a background. The head is enclosed in an elaborate chalk frame, and beneath, the curious may generally find drawings of loaves and fishes. All this is accurately drawn, and coloured with a certain feeling; but the task is one literally of memory. The artist has been taught every stroke of his pencil, and in his work of to-day you may see a perfect fac simile of that drawn yesterday. A moment's glance at the group of poor people who surround his performance, has its lesson. This rude daub of chalk upon our London pavement, that is to be washed away by the lowering clouds, is to the eyes of the poor folk who surround it, a grateful sight. They are not hypercritical as to the tone and finish of the work: no learned remarks as to fore-shortening may be heard among the group of spectators; but the sight has its wholesome attraction, nevertheless, and softens many coarse hearts for the moment.

But now, as we dwell upon these rude street-arts, the patterer's hoarse voice calls our attention to the specimens of street art he holds in his hand. Here we find repulsive portraits of the most notorious criminals—all with so wonderful a family likeness, that it is necessary to refer to the accompanying letterpress before we can distinguish one from the other. In the collection we find exaggerated accounts of all the crimes that have from time to time engrossed public attention; drawings of criminals in various costumes; series of pictures showing the various repulsive incidents of a hard master's career; the immortal ride of Dick Turpin; the exploits of Jack Sheppard, and other equally instructive subjects. The policy of allowing men to hawk these atrocious pictures in the public street is at least questionable, when the bell of the muffin boy is muffled as a public nuisance; and when we reflect that these drawings sell their hundreds of thousands, the extent of their influence may be faintly appreciated. How far these terrible pictures of criminal heroism counteract the good effects of the rude art of the umbrella, and the Italian's board, is a nice point, but one, unhappily, that it is impossible, with our imperfect knowledge of the lower grades of the working-classes, to determine. Therefore it is to be combatted by surrounding the great bulk of the people with objects that educate and refine the eye. Etruscan grace may be as cheaply offered to the mechanic as the shapeless, glaring household objects with which he is now furnished. He may as cheaply deposit his bunch of flowers in a fac-simile of the Portland vase as in an old pitcher; and the graceful hop-plant may as well encircle his jug of foaming ale, as the barbarous willow-pattern.

This reference to the willow-pattern recalls to mind the great onward step it represents; and it is reasonable to hope that we are approaching the time when another step will be made throughout the country, that will reduce this graceless old design to a curiosity for museums, where it will remain, side by side, with the clumsy earthenware of our ancestors, a record of the art which decorated the crockery of the great mass of English men throughout the first half of the nineteenth century. As yet, street-art, as displayed in the hawker's basket of china and spar ornaments, cannot be said to be in an encouraging condition. The large trade that was carried on some fifteen years ago, in carved stone-fruit from Derbyshire, has dwindled away; but many people can call to mind the very rosy apples, the wonderful peaches, the plums with ultramarine bloom upon them, and the pears of the most melting appearance, that were carried about the streets, and which probably had to answer for many broken teeth. Even now, raffles for splendid ornaments, in the shape of china cottages, with removable roofs, for mustard pots, and other designs equally felicitous, are carried on in the poorer neighbourhoods of London.

All who are experienced in the art which is popular in the bye-ways, seem to arrive at the conclusion that glaring colours, and humorous or grotesque design, are its most popular features, and those which hawkers strive to obtain. This experience enforces a principle that has long been received by observant men, namely, that colour attracts the eye sooner than form. Hence, in truth, the successes which Catholic missionaries have achieved over their Protestant rivals. The Protestant, solely in his religious observances, clothed in black and white, cannot make that first impression upon the savage which the Catholic, with his scarlet and gold, at once produces. In the same way, the classes in this country who have enjoyed no degree of art-education, see, comparatively speaking, with the eyes of barbarians. They have to be taught the very alphabet of that art, of which Turner is, perhaps, the highest representative; for they must be able to estimate the difficulties that beset the artist's path, and to sympathise fully with him in his conception, before they can approach his work with the respect and that power of appreciation which he should be able to command. That they are advancing towards this knowledge, their present purchases assure us; and this assurance may well encourage the hope that art will shortly go far to humanise and refine, where force has failed to curb. We may turn to the Italian image-boy with his load of plaster, and follow the fine verse that Wordsworth addressed to him:—

"Hope be thy guide, adventurous boy;
The wages of thy travel, joy!
Whether for London bound—to trill
Thy mountain notes with simple skill;
Or on thy head to poise a show
Of images in seemly row,
The graceful form of milk white steed,
Or bird that soar'd with Ganymede;
Or through our hamlets thou wilt bear
The sightless Milton, with his hair
Around his placid temples curl'd,
And Shakspeare at his side—a freight,
If clay could think, and mind were might,
For him who bore the world.

These humble dealers in the best specimens of high art, that have yet been brought within the reach of the bulk of the people, have hardly received that recognition which their services have merited. Their object, undoubtedly, is gain. It would be ridiculous to declare that when an Italian sells a plump Cupid to a servant girl, his soul is filled with the great idea that he is disseminating an appreciation of the beautiful that he is doing service to the human race; it would, on the contrary, be nearer the truth, observing generally, to tax him with an object purely selfish; yet has he a claim to our regard. This claim consists in the indubitable fact that he and his companions have brought their comprehensions of art to their aid, in order to gain a livelihood that they have had the sagacity to know, for many years past, the precise state of the public taste—that they have known when to sweep offensive and poor images from their board, and replace them with forms upon which the verdict of ages has been pronounced. This claim is clear and strong; and we hope that it will strengthen daily, till the homes of the humblest cottagers are graced by the touches of the greatest sculptors, and the pencillings of the greatest masters. This is neither a wild nor a poor hope, seeing that the presence of beauty is potent for good. When galleries of art exist in every home, and libraries for the people fill up corners in the sitting-room of every working-man's cottage, many ideas of a widely-diffused social happiness, which now provoke popular sneers as Utopian and unwarrantable, may be realised. Those who pause on the rapid current of events, to look back upon the dark times that lie, like heavy backgrounds, behind them, see a marvellous contrast. They survey from a fairy land, a dull, tearful world of sorrow and of wrong; they mark occasional sparkles of gold, and yards of velvet, but generally squalor underneath the haughty few and the crushed and groaning many. And now, looking again in their own neighbourhood, the scene is bright; while ahead, a haze dims the sight, but they fancy that a light of unknown brilliancy glimmers through. Falling fetters clink as they touch the ground, while a ministry of noble men arrange the workman's library, and the artist is busy in his home.

THE AGREEABLE RATTLE.

I suppose that everyone who possesses that annular form of society called "a circle of acquaintance," can number in its radii at least one of those social bores whom young ladies are pleased to denominate "agreeable Rattles." A more offensive production of civilised life I can scarcely imagine; and, I protest, at I hear this, ye young ladies, that before I would tame y allow myself to be called by such a contemptible name (even by you, Miss Nelly) I would forswear the charms of female society, and turn misogynist at once.

For whatever is there, my dear young ladies, in this Rattle of yours, that is so very agreeable? Is his conversation intellectual, or even witty? Can you ever remember anything that he ever said to you that was worth treasuring up, either in your heart or head? Could you ever understand all that he spoke of, or follow him, with any clearness of apprehension, in the *disjectaque membra* of his talk? What is there, then, in him, in the name of Wonder, that makes him so "agreeable?" Perhaps he is like a certain reptile with an attractive exterior, and has only to set up his rattle, when, lo and behold! the little dove is at once fascinated, and, after a slight fluttering and indecision, falls a victim before the open jaws of her allurer.

Now, look at Chatterton, for instance. We all know how he was obliged to get his exercises done for him at school, and how at College he could never master sufficient Greek to get him through Smalls; but was twice plucked for his Little go, and yet, if I have heard that man called an agreeable Rattle once, I have heard him some few hundred times. The odious name has been branded upon him, and the poor fellow not only rejoices in it, but positively gets his living from it. No matter what kind of party or entertainment is being got up, some female member of the family is sure to add Chatterton's name to the list, for no other earthly reason than that he is "such an agreeable Rattle!" The consequence is, he is to be met with everywhere. I met him twice last week at the Grantham Joneses, and Timmins's; and ten to one if he doesn't turn up, next Friday, at the Portman's. If so, I only hope we may sit at opposite ends of the table; for he takes away my appetite, quite as much as those mild specimens of humanity, Coo and his bride, did last week at the Timmins's, when (between mouthfuls) they were so demonstrative in their honeymoon affection. Like all agreeable Rattles, Chatterton's conversation is feeble in the extreme, and flows on in a continuous common-place ripple. Like those wonderful couriers who can speak all languages "indifferently ill," he can talk on all subjects with unfeeling incorrectness. No matter is either too great or too small for him: all is fish that comes to his net; and both whales and minnows receives equal attention. He is as Demosthenes on the sea-shore, and no roaring of the waves can put down his lesser oratory. Not very long since, at the Brookstankses, I had an opportunity of listening to a sample of it. As usual, it had fallen to his lot to take down to dinner one of the nicest girls in the room; for mammas, I have noticed, are favourably disposed to the agreeable Rattles, and invariably send them down-stairs with the most agreeable girls and this, by the way, is all that is worth gaining from the character so Laura Templeton fell to Chatterton, whilst I, with far deeper and more sensible attractions—however, never mind! I followed in their rear, with old Lady Barebones, relict of Sir John Gaunt Barebones, Bart., of Spareribban Castle, Rentfreshire.

To relieve my martyrdom as much as possible, I contrived to get the next seat to Laura, and, as old Lady Barebones entirely resigns herself when at table to gastronomic feats of dexterity, that (especially with soup) admit of but little desire for conversation and as, moreover, her parts of speech are ambiguous, and delivered in a dialect which I do not profess to understand—I consoled myself with the idea that the pleasant chat of my fair right-hand neighbour would far more than compensate for the disagreeables of my left. But we are born to trouble and vexation of spirit. Chatterton had got possession of Laura, and had started his agreeable Rattle, and, in its unceasing whirling jargon, not one note of my penny-trumpet could be heard.

"Been to the Crystal Palace to-day?" (What a windfall the Great Exhibition was to the agreeable Rattle!) "Though, of course, not shilling days: no ladies there, and this the last week. Your glass, I think; ah, if we could but use the same! I got in by accident one day last week,—nothing but shopkeepers' wives, —half drank brandy, and the other half eat cheese: the odour was so distressingly offensive, that, 'pon my honour, I was quite overcome,—salt, I think you said,—and sank down quite limp in a refreshment room. Clever *ruse*, having pretty girls for the ices.—How hot this soup is!—There was a fat old lady from

e country,—great fun, I assure you,—evidently her first ice, and didn't come naturally. Ices are aristocratic, ain't they? They n't suit the *oi polloi*. Beg your pardon for quoting Greek.—d college habit; one gets all sorts of bad habits there. Capital ttles these, do change your mind. Talking of habits, your w ne is worthy of Diana herself, if she ever had one. I suppose e had, because we read of her train, you know, and it couldn't ave been a train like those at the Costume Ball. I saw you in e Row yesterday; new mare, wasn't it? Good action and a ce tail—does she ride easy? See old Guttlebury's face when e caught sight of the venison! Who was your cavalier? Ah! usins are very convenient. Did you read in this morning's *imes* about the Queen at Liverpool?—all the corporation were aked—fancy a damp alderman; unpleasant for her Majesty, I ncld think. With pleasure, -that wretch of a Guttlebury's just ede me take wine with him; he only does it to get more ne champagne. Let us have some together, on the sly, and nod to e *sprynge*. That's it. I saw Mrs. Lynx putting up her glass at ou, -her three girls are horrid ugly, and she always gets savage n company when pretty girls are there,—she's jealous of you ow. Blancmange to this lady. Here, let me help you. I give ou that flower into the bargain,—I hope it's a good emblem. What is it? Oh, come, you can't make me believe you don't now, every girl learns the language of flowers at school. Do you ver make wax-flowers? Look at Mrs. Turban Smith's head-dress. dd, ain't it? Wonder how she fixes it on. See the girl sitting wo off her, with her back hair brought round in front; I should ave thought she'd had enough of that style of coiffure. Why? h, didn't you hear of her being at the Scrooper's, when the man ith the calve's-foot jelly turned the contents of the dish over ne top of her head? Of course, as her hair was twisted ound in front, it made an embankment for the jelly, and there fixed itself into a mould, and was taken off in a piece. Fact, assure you. De Witts was there, and he said she ought to e prosecuted for coining,—crown-piece, you know—see the ke?"

And with this light and frivolous nonsense he bored Laura's ars during the whole of dinner-time; whilst I, who had prepared ens ble remarks on the moral and social benefits that would esult from the intercommunion of nations in the Great Exhibition, could not edge in a word, and was obliged to address the elaborate sentiments to old Lady Barebones, who nly took a Scotch view of the subject, and replied, "Eh, noo, ye say weel, and it's a' the siller that 'll gang int' our pockets."

The agreeable Rattle goes on just in the same way at balls and evening parties, and, indeed, anywhere else, in society's busy wheel of fortune, where he has a chance of "putting in his spoke." He is never very particular; anything furnishes him with a keynote on which to spring his Rattle. His garment's bouquet, her handkerchief, their *vis-à-vis*, the music, the opera, the season,—all are passed over in rapid succession, and their merits or peculiarities discussed and decided in a single sentence. Like a busy bee, he roams from flower to flower of speech, but, unlike that migratory insect, fails to extract the sweetest part of the subject on which he touches. But a honeycomb and a coxcomb are two widely different things; and the "agreeable Rattle" is too much of the latter ever to be half so useful or agreeable as the former.

When we meet him, my friends, let us contemplate him with emotion, and bestow upon him the pity he deserves.

DOTTINGS ON THE DANUBE.

I had the honour of being entrusted, last autumn, with a commission to obtain, in Russia, and on the Eastern coasts of the Mediterranean, certain information for one of the leading London newspapers. My route lay to Vienna, and thence, by the Danube, to the Black Sea. It is possible that, at this period, when the visit of M. Kossuth to England has revived much of the interest which the Magyar struggle caused to be taken in Hungary and its inhabitants, a few extracts from the diary of a hasty traveller may not be unacceptable.—S.B.]

I had not intended to make any stay in Vienna, for the season was getting advanced, and I had a long journey before me. But the steamer from Vienna to Galatz ran but once a fortnight, and had departed a couple of days before I arrived in the Austrian capital. However, no one can be at a loss for occupation or amusement in that picturesque and cheerful city. I took up my quarters at the *Goldenes Lamm*, in the Leopoldstadt, and have seldom found time hang less heavy on my hands. After a long day's sight-seeing, conducted in that hard-working, persevering style adopted by English travellers, and neither exactly understood nor violently admired by most foreigners, there are many less pleasant places than the front of a Viennese coffee-house to rest in. Seated at your little table, in the open air, with coffee, ice, or what you will, brought you at the slightest gesture to the sedulous and watchful attendants; with your *meerschaum*, or cigar, or *chibouque*, if you please—for there is too various and constant an influx of foreigners for anybody to stare at anything you may do; the darkening fortifications of the city before you, the brightening lights of the *café* behind you, and around you a miscellaneous group of officers in white uniform; full-dressed theatre-goers, taking their coffee *en route*; among them, perhaps, a few ladies; shabby artists, with terrible beards; sallow Jews, with keen eyes, watching everything; a calm Oriental, with a courteous gesture if you approach him, but apparently watching nothing; two or three full-blown, sunburnt English travellers, shouting out their half-dozen words of German with bold, insular intonation, and obviously conceiving that they are paying rather a graceful compliment to Austria by calling the waiter *Kellner*; a straggling Italian boy or two, with plaster medallions for sale; a batch of students, with belted *blouses*; and two or three mendicants, winding in and out among tables,—intruders whom an English waiter would bully off in two minutes, but for whom the Austrian waiter actually steps aside;—with this group, and a constant background of figures passing and repassing in the moonlight, you can amuse your eye very satisfactorily, while you rest your legs after your long walk to, and over, and round the lovely Leopoldsberg, or its neighbour, the Kahlenberg. And, if you like to talk, the only difficulty in the way of that is your probable ignorance of the language of your neighbour; but you may be quite sure that, if you address him, he will not *edge* away, as much as to say, "This fellah is going to try some cheat upon me."

General Haynau happened to be crossing from England in the same boat with myself, and I saw him three or four times during the earlier part of the railway journey. At Hanover, he breakfasted at a table near mine. The miraculous blanched moustaches, hanging upon his shoulders, would have been unmistakeable labels, even if he had not been pointed out to me by a companion. There did not appear to be anything else remarkable in his appearance; he seemed a lean, wiry, active man, then slightly lame. His keen, light eye was very restless, and he evinced much discontent at the careless way the breakfast was served. I did not see him after leaving Hanover, but his conduct, and the affair of the draymen at Messrs. Barclay and Perkins, were subjects on which I had, afterwards, to hold a good many conferences, both with Austrians and Hungarians. The "draymen's demonstration" caused a great sensation among both. I am bound to say, however, that though, during my stay at Vienna, the affair was much discussed, and especially by military men, I experienced none of the annoyance to which it was said Englishmen had been subjected in consequence. Not a day passed, during my stay in Vienna, during which I had not a long chat with some knot or other of Austrian officers, to whom I had no other introduction than that of chance-meeting. The topic was usually brought up very soon, but, energetically as it was treated, as a dialogue at Presburg will show, I never heard an expression used at which I could take umbrage. There were stories, at the time, of actual outrages being offered to some English residents in Vienna, by way of reprisals for the Haynau affair, but I was never the object or the witness of any discourtesy.

Somebody who certainly divided with General Haynau the attention of Vienna, while I was there, was a Scotch gentleman, whose slaughterous exploits among our leonine and elephantine fellow creatures have gained him a crimson reputation. He appeared in the streets and in the *cafés*, in full and flaming Highland costume, which showed well upon his tall and masculine figure. I have said that the influx of strangers of all nations into Vienna seemed to have habituated the residents to novelty, but this stranger's case was an exception. The "tail" which attended him in his walks out was very flattering, and the excitement he caused was by no means confined to the humbler classes. I was much catechised in the dining-room as to his uniform, and whether it was military, and especially—this was an inquiry actually sent up to my room by some ladies—whether persons exposed them-

HAYNAU—FROM A SKETCH TAKEN DURING THE PRESENT YEAR.

selves in that fashion in the presence of the Queen of England. I felt bound, as a Briton, to violate my private feelings, and give a strong opinion in favour of the beauty and the decency of my fellow-countryman's garb, but I spoke as a patriot, not as one who tells the truth from his heart. Privately, too, I have always had a strong feeling against the encouragement of any provincialisms. I do not, for example, see the advantage of preserving useless languages, simply because they are old. If they embalmed a literature, the case would be different, but when bishops are praised for preaching Welsh sermons, for instance, and thereby helping to perpetuate distinctions of race, I cannot sympathise in the approbation. But this is a piece of personal prejudice, and I kept down the feeling on which it was founded, when I sent word to the German ladies that the Highland dress was considered a most distinguished one, and had been declared by *the* Lord Castlereagh to have "many and peculiar advantages."

But I was desirous to get on with my journey, and so, instead of waiting for the steamer, I thought I could run a little way forward and be taken up. This may be considered a slightly Irish mode of progression, but one not indefensible; one is, at all events, doing something. So, as the steam-company's tickets are available on all their boats, I laid out fifty-four gulden in the purchase of a series of labels, which, in all, franked me to Galatz, but selections from which would land me at the intermediate towns, and the first place I reached was Presburg, which is but three hours' steaming from Vienna. The shores of the Danube are not interesting, thus far. Here and there a lofty rock, with a ruin, catches the eye, and the Castle of Theben, especially, which has a little melancholy love tradition attached to it, might attract a sketcher. But Presburg itself will repay a visit. Its historical associations are numerous, and its ruined palace, on the top of a lofty hill, is the place where Maria Theresa made the celebrated appeal to the chivalry of Hungary, which was answered by the flashing of swords from their scabbards, and the shout, "Moriamur pro rege nostro, Maria Theresa!" This city was once the capital of Hungary, and is the place of coronation of its kings. You see, near the river, a spot where part of the coronation ceremonial is performed; the new king rides thither on horseback, and makes the sign of the cross with a sword, with other gestures, indicative of his determination to protect his country. But all these matters are so fully described in Mr. Murray's book, that a hasty traveller can do nothing better than transcribe from it pages, and, indeed, most travellers do so, hasty or not; and it is wonderful what a kindred feeling exists among the mass of voyagers as to scenes which come into these ubiquitous guide-books. Everybody has seen exactly what he is therein told to see (which is nearly every thing worth seeing), and an English nobleman, whom I met at Berlin, described a party whom he had joined on the road, as "very well-informed fellows—thoroughly up in their Murray."

My most lively recollections of Presburg were derived from the *Bohemian Girl*, whose papa was stated to have resided there:—

> "The Count is Count Arnheim; at Presburg he dwells,
> Where the Danube goes murmuring by;
> At Presburg, the city so old and so fine
> Where they make the sweet biscuits you eat with your wine,
> Which a man in the Strand (I forget his name) sells,
> And you cannot do better than try

That irreverent introduction to a narrative of Miss Rainforth's woes, I am ashamed to say, came into its writer's head as, a dozen years after it had been forgotten, he stood on the castle height, and looked at sunset on the Danube. I should have been glad to be in a less flippant mood; but near where I had taken up my station, came two young ladies, who had brought some knitting and some onions, and who, seating themselves on a broad stone, alternated their "casting off," and "slipping," and "dropping," or other mystical manœuvres, with large bites of the fragrant vegetable. As they laughed loud, and cheerful society is what a wise man should cultivate (according to several philosophers), I ventured to address them. I received from one, not the prettiest, but the one who spoke some French, information that there were not many ways to amuse oneself in Presburg; there were billiards, and there would be music, presently, in the principal promenade in the town; "some persons, also, courted ladies." The first resource I did not much care for; nor, indeed, for the second; and the third struck me as open to the objection that I had only about ten hours to remain in the place; so I took leave of the merry onion-eaters, and went to dinner at an hotel, where I found several parties assembled. Some little courtesy of the table brought on conversation with my nearest neighbours, a medical man, and three or four young military companions, and we gathered round the same lamp for a cigar. The Haynau affair was soon on the *tapis*, if that be a proper word for the well-waxed boards. Our medical friend was energetic upon that and all other subjects, and his zeal amused his friends, who once or twice evinced anxiety to impress upon me that it was only his way of talking, and that he meant nothing rude. He declaimed most eloquently upon the Bankside theme, and demanded why Lord Palmerston, if he really regretted the attack upon Haynau, did not give a lively colour to his protestations by distributing, off-hand, a plentiful allowance of flogging and imprisonment among the parties concerned. But this gentleman was habitually determined. He had a keen sense of religion, and was quite prepared to vindicate it, even at the expense of a little apparent harshness. The band, which, as my merry onion-ladies had promised, had begun to play in the square, struck up the march from *Robert le Diable*.

"Meyerbeer is liked in England, I think?" said one of the officers.

"Yes," I said, "so much so, that his three operas alone have carried one of our theatres through a brilliant season."

"He is an abominable man, and a blasphemer," remarked the medical gentleman; "and I should have great pleasure in meeting him in a boat."

While the others laughed, I was trying to explain to myself the logic of this choice of a nautical companion.

"Yes, assuredly," continued he. "You may laugh, gentlemen, but the whole object of that man's life is the overthrow of religion. All his works are wicked; but this last, *Le Prophète*, is the worst of all. He is a Jew, you know; that accounts for it."

"There can be no wickedness in music," I said, "and, therefore, you must refer to the words. Now, M. Scribe is not a Jew."

"No; but Meyerbeer tells him what to write. 'Write me,' says he, 'an attack on the Christian religion.' Scribe has no faith—what Frenchman has any? He doesn't care what he writes, so that he is paid. So out comes blasphemy like the *Prophète*, ridiculing our religion. I should like to meet M. Meyerbeer in a boat; it would give me much happiness."

"But why in a boat?"

"Because I would take him by his neck, and put him under the water. If I had him in a boat, we should have no more blasphemy from M. Meyerbeer."

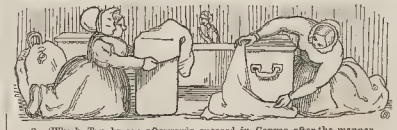
I don't remember that we sat in judgment upon anybody else that evening. I went to bed early—I should say to my bed room—but found that the bed itself was such a mass of damp, and that a sheet I tore off fell with such a dead "flopping" sound, that I thought I had got into a hydropathist's room by mistake. After a few hours' sleep on a couch, I came down, with a cold body and a feverish mouth, to see what was going on. At the back of the room in which I had dined was a very large billiard-room, opening with French windows to the street. Seats ran round the room, which was completely lighted up. It looked like an immense cabin on board a steam-boat. People, waiting for the vessel, were lying about in every variety of discomfort—some wrapped in cloaks, others in sheepskins. The white uniform might be seen in the best corners, half hidden by the large mantle. Women, in that restless, nervous fidget which long "sitting up" (a very distinct thing from "staying up") causes, were changing their position fifty times in a minute, and glancing savagely at the lights; for one always charges one's restlessness on something out of reach. A few children were sprinkled about; some were crying, but most of them were dead asleep on the floor. Dreadful snoring was going on in various quarters. In one corner there was a species of bar, where the sleepiest girl I ever saw yawned piteously in your face as she handed glasses of *liqueur*. A weary waiter was wandering about, sustaining himself by holding on to the billiard-tables. The scene was one of heat, and irritation, and unpleasantness. But everybody was not unhappy. One of the French windows had been unfastened, and some boys had come in the waiter did not seem to notice them, but they were obviously surreptitious visitors, and were having a stealthy game at billiards at one of the tables. The game was rendered more complicated by the fact that on the floor and around the table were lying various slumberers, and in addition to the queer attitudes, such as those of quite turning one's back to the table, or, in revenge, sprawling all over it, like a frog, which, I presume, are *de rigueur* in the science of billiards, the players had to straddle over the fallen, or to get a good position among their legs. And they were not always successful in avoiding annoyance to the prostrate parties, and, indeed, one man, a sort of pedlar (he afterwards tried to cheat me, on board), but was defeated), lay awake expressly for the purpose of hitting with a stick at the ankles of any boy who came within range. I watched the game for some time; the lads were no novices, and played adroitly, as well as boldly; but the atmosphere was too unwholesome for long endurance. I went through the French window, and the change was delicious. I had emerged into the most beautiful of moonlight mornings. The sky was clear, and of the darkest and deepest blue; the air was keen and fresh. The lofty ruin of the palace rose well and sharply defined, as did the more prominent buildings of the town. But as I approached the Danube, the stream scarcely sparkled, and the banks looked dull and gloomy, the river mists were beginning to rise. As the daylight came on, and the wet deck of the steamer received the passengers, the mist grew thicker and heavier, and as we left the quay at Presburg, Englishman as I am, I trembled for the credit of our London fogs.

S. B

THE ADVENTURES OF MR. VERDANT GREEN, AN OXFORD FRESHMAN.—BY CUTHBERT BEDE, B.A.—PART I.

1.—Mr. Verdant Green, after receiving several Domestic Presents, considered essential to his University Career—including Worsted Stockings and Flannel Waistcoats from his Mother, Woollen Comforters and a Recipe for the Toothache from his Maiden Aunt, Miss Virginia Verdant, together with a Purse, a Watch Pocket, and a Pair of elaborate Braces, from his Three Sisters—

2.—And having seen to the Packing of his Trunks, which is effected by the united strength of the Establishment,



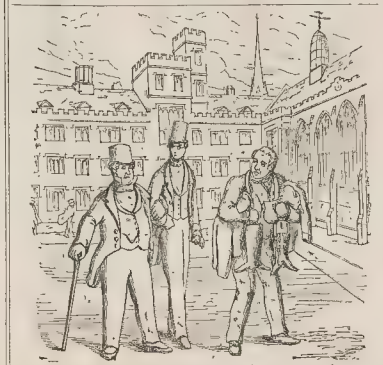
3.—(Which Trunks are afterwards encased in Canvas, after the manner of Females,)—

4.—Bids adieu to the Manor Green, Warwickshire, and, with his Governor, starts to meet the Oxford Coach.

5.—The Coach is rather full; all the Passengers are Oxford Men, and as the only one who is not Blowing a Cloud is Blowing a Post Horn, Mr Green, Sen., does not particularly enjoy the journey. He also feels much alarm at being driven down Hill by "A mere Lad, Sir!" to whom the Coachman has given the "Ribbons."

6.—Contrary to Mr. Green's expectations, they arrive safely in Oxford, and are set down at the Mitre; where they are attacked by a horde of the Aborigines, in the guise of Impromptu Porters

8.—Excited by the Port and the Discourse, Mr. Verdant Green passes a restless night, and dreams he gets a Treble First, and is made a Bishop.



10.—Mr. Verdant Green, accompanied by his Governor, proceeds across Quad, to see the rooms that have been secured for him. The Scout shows them the way to "Third Floor, No. 4, Staircase, First Quad.

7. Having been rescued from the Aborigines, Mr. Verdant Green and his Governor enjoy a snug Dinner at the Mitre. Under the influence of the famous Oxford Port, Mr. Green, Sen., gives his Son much advice as to his University Career.

9.—In the morning they proceed to St Boniface's, and call upon the Head of the College, Dr Portman, who wrote the celebrated *Dispensation* (in 8 vols.) *on the Greek Particle*; and Mr Verdant Green, having passed his Matriculation Examination some months previously, is formally admitted a member of St Boniface's College, Oxford.

11.—Mr. Green, Sen., pronouncing an anathema on the staircase, the Scout defends it. "Very awkward staircase, sir? Oh no, sir! Nothin' to what it is in some Colleges, sir! The gentleman 'll soon get used to it, sir."

12. Mr. Green takes the rooms, pays thirds for the Furniture, and departs. The Scout indulges in a Ballet of Action.

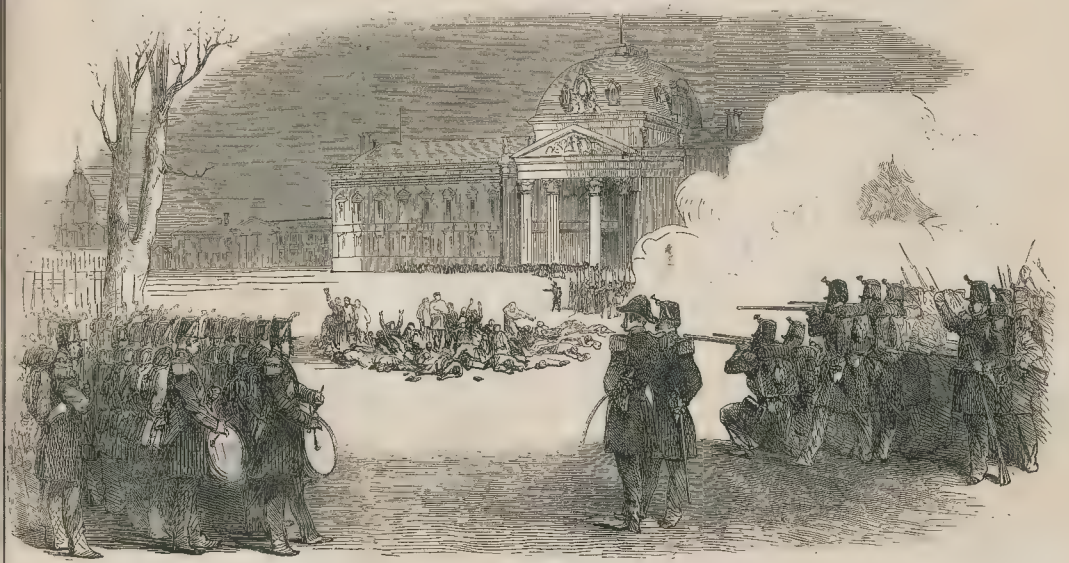
THE PROSPECTS OF EUROPE.

"ORDER" reigns in Paris. The sword and the cannon have superseded all other modes of government among our polite and versatile neighbours. An iron tyranny, without parallel in European history, has succeeded to the conflict of opinion which has raged since February, 1848. Liberty is defunct. Fraternity has no representative between Boulogne and Marseilles, unless a fierce dragoon with a sword at the throat of an unoffending citizen can be deemed its personification. Equality, it is true, exists, but it is an equality of degradation. High perched in his impenetrable coolness, the Dictator of France looks down upon a whole nation, wherein he can recognise but two classes—an army which is his instrument of coercion, and a multitude which it is his pleasure or his necessity to coerce. Until the votes of the people give something like a legal sanction to the existence of the *de facto* Government, martial law will be the only law throughout France. All other law is superseded; and neither opinion, nor property, nor life has any chance of existence if it presume to thwart the wishes and designs of the new Autocrat.

We state the fact thus broadly, because, in considering the very serious question of its result upon Europe and upon ourselves, it is necessary that the true position of affairs among our neighbours should be clearly understood and acknowledged. The revolution wrought by the unconquerable energy and adamantine sword of M. Louis Napoleon Bonaparte is a marvellous but most indubitable "great fact." He is the absolute lord and master, for the time being, of the destinies of France. The elections that close this day, of which we shall not know the details for some time, cannot possibly alter the position. The French have no liberty of choice: Louis Napoleon is before them; and if they did not please to accept him by their votes, they would be compelled to endure him by another and equally effective process. He is the most illustrious and powerful *pis aller* of whom we have any record in history or experience. Even those who hate him are compelled to give him their suffrage, lest in opposing him they should prepare the way for calamities which are more dreadful than the worst they can conjure before their minds as likely to result from a military despotism. "Better," they say, "a strait jacket than a total colapse. Better even the treadwheel and the

DRAGOON, WITH HAY AND PROVISIONS FOR THE NIGHT.

CHASSEUR DE VINCENNES



THE REVOLUTION IN FRANCE.—TROOPS SHOOTING INSURGENTS.—(SEE NEXT PAGE.)

silent system than a gangrenous dissolution of the whole body politic.

Such being the feeling among the French themselves—of which the able letter of the Count de Montalembert is a most remarkable and significant proof—it is useless for public writers in another country to discuss any longer the real or supposed necessities of the case, or to waste their time in any further criticism of the manner in which the revolution was wrought. The thing, it appears, had to be done—and it was done. The wheel has turned, as it has turned before; but out of the abuse of liberty by a people, loving liberty but not comprehending it, has sprung a military tyranny. It is nothing but the old story—the often-predicted and precalculated result. As things were in former times, so are they now. Like begets like; and politics, shifting and changeful as they may appear to those who take a too close view of them, are as certain as algebra, when the past is called in to be the commentary upon the present, and when the mind is enabled to grasp, not simply the events of to-day, but the causes which have been combining to produce them for generations or for centuries.

Taking the new revolution as it stands, and as it is likely to stand, and dismissing from our minds all further concern about it the motives which produced it, or upon the manner in which it was wrought, it is of the most serious consequence to us, the nearest neighbours of France, to know how it is likely to affect France in her relations with the rest of Europe and with ourselves. The success of M. Bonaparte takes France out of the alliance and brotherhood of constitutional states. At the present moment liberty is crushed among the whole of the greatest and most powerful nations of the Continent. Belgium, that enjoys freedom of opinion under a wise King, is so weak that her independence is already threatened by the French. In obedience to despotic commands, which she does not deem it prudent to resist, she has refused a refuge within her territories to the fugitives and exiles from France who have been driven out by recent events; and Switzerland, still weaker, has submitted to the same humiliation at the same hands. The bayonet is lord of the ascendant. The four most powerful chiefs in Europe have among them an army ready for the field of upwards of one million and a half of men. Russia, Austria, Prussia, and France, those military and absolutist states, will not tolerate, one more than the other, the expression of a free opinion, or acknowledge any right in the industrious multitudes, by the spoliation and tyrannous taxation of whom they are alone enabled to support those fearful armaments, to have the slightest voice in the management of their own affairs. Will France, identical in her new principles of government with these states, join their league? Or will she play the absolutist for her own purposes at home, without making common cause with them in their efforts to crush constitutional liberty in other parts of Europe? These are the questions which profoundly move the minds of all thinking men at the present time. They deeply affect the English people, and deserve to be considered under every possible aspect.

In the first place, as we stated last week, it may turn out to be the policy of the new Autocrat of France to hold aloof from the other Autocrats of Europe—to be a tyrant at home, but, with the hope of aggrandisement at the expense of his neighbours, to play the part of the apostle of freedom abroad. In this case what would result? *Bella, horrida bella!* Italy and Switzerland, if not Belgium, would be the points on which aggression would be made, and Europe would be involved in a war, in which, although such sovereigns as the King of Prussia, the Emperor of Austria, and the Czar might be arrayed against France, France might reckon on the temporary support of the sorely deluded, defrauded, and insulted Germans, and of the still more cruelly oppressed Italians and Hungarians. This would be the great war of principles, foreseen by the most eminent statesman and philosopher half a century ago, but of which no human sagacity could estimate the frightful cost, or the more frightful duration. Let us hope that so dreadful a calamity may be averted.

In the second place, M. Louis Napoleon, admitted into the circle of absolutism, and acting in a manner that must have given the greatest satisfaction to the powerful sovereigns whose policy he has adopted, may ally himself more intimately with them, and make common cause with them against the liberties of Europe. In that case, England will be the only representative of constitutional principles and rational freedom in this hemisphere; and, as England is exposed to the rancorous reminiscences of the war that closed with Waterloo—reminiscences which unhappily a large portion of the dominant military classes in France make it a point of almost religious duty to keep constantly before their minds—it is not likely, if such a league were once formed, that England would long escape the hostilities of states against whose oppressions and exactions her own form of government would be not only a continual protest, but among whose populations it would be a ceaseless incentive to imitation. Should such a combination take place, the perils and responsibilities of England would be great. But great also would be her allies. She would not be allowed to fight the battle single-handed. Did her own pith and energy not stand her in sufficient stead, had she no allies in the other hemisphere, who, in such a cause, and to gain a voice in European politics, would rush to her rescue, she would have the aid of several more potent, if not invincible, auxiliaries in Europe. Russian gold, plentiful as it may be, would not prevent or even postpone for any lengthened period the bankruptcy that would involve Prussia, Austria, and France. Soldiers without pay would degenerate into banditti, and the people who in such a day would lift their long-oppressed heads would read their rulers a lesson, and establish upon the ruin caused by the military system the constitutional freedom for which in every part of Europe, with the sole exception of Russia, they are now yearning with an intensity which has shown itself in revolutions, and attempted revolutions, for the last half-century. In such a contingency the course to be pursued by England might be painful, but it would be clear. If not allowed to prosper in her own way, and to mind her own affairs, she would only have to hoist the standard of constitutional freedom, and the nations of the earth would flock round it. Even in France, that loves liberty so fondly but so foolishly, a large section of the people would take heart of grace once more, and, in spite of Waterloo, would endeavour—possibly not without success—to cast off the yoke of the last of the despots, and try once again the feasibility of a moderate, or perhaps immoderate, Republic.

But this, also, would be the great war of principles, fought, it is true, under a nobler and holier standard than could be raised by the ambition of a Bonaparte, or by the desire of national aggrandisement which may animate the French; but it would, nevertheless, be a deplorable war to be engaged in—a war that might desolate the world for a generation, and entail sacrifices unparalleled in history. England most assuredly has every motive to avoid being involved in it.

But there is a third solution of the difficulties of Europe. Although despotism supported by a soldiery must give its soldiers something to do, it is possible that M. Louis Napoleon may have a sincere desire to make his name illustrious for evermore, by reconsolidating the liberties which he has temporarily overthrown, and by building up a fabric of material glory and prosperity for the French people. It is possible that, feeling himself secure, he may endeavour to be a statesman as well as a soldier; that he may do his best to develop the natural resources of France, hitherto too much neglected; that he may strive to secure for her ingenious artisans a fair free field for the exercise of their skill and industry; that he may think it his paramount duty to make France wealthy, to extend her manufactures, her railways, and her trade; and that, instead of looking for aggrandisement of territory or influence at the expense of Europe, he may employ and reward a portion of his armies in other quarters, and turn the tide of his arms against the semi-barbarous nations of the Mediterranean seaboard of Africa, where France has already secured a permanent footing. The recent attack upon Salee, and the remembrance of Mogador, and the pride attached to it in the minds of the French, show where the safety-valve lies. The development of French industry and trade, the gradual taxation of the existing tyranny, the restoration of the liberty of the press, peace with Europe, and a quarrel with the Emperor of Morocco, would, to use a phrase that our Gallic neighbours understand, be an excellent *partie*. As far as Europe is concerned, it would be unexceptionable.

We have thus briefly sketched some of the most obvious dangers to England and to Europe resulting from the singular turn which events have taken in France, and pointed out some of the solutions which are not improbable. We have, perhaps, attributed more stability to the throne or chair (whichever it may be) of M. Louis Napoleon than is will attain; but the chances for the present are so decidedly in his favour, that any speculations founded upon the overthrow of his power would be irrelevant. Among many contingencies we ought most certainly not to forget, that after all Louis Napoleon may prove himself as wise as he has been bold; that his first perjury may be his last; and that he may desire to retain, by his justice and his moderation, what he has conquered by his daring. We fear, however, that this is hoping too much.

THE REVOLUTION IN FRANCE.

THE three illustrations upon the preceding page have been sketched by our Artists in Paris during the recent conflict.

Two of the Engravings portray specimens of the soldiery who were actively engaged in executing the cruel decrees of the Dictator of France.

The third Engraving presents a sad episode in this frightful drama; the incidents of which are thus related by the special correspondent of the *Observer*:—

Mr. ——, a wealthy trader, assures me that on Saturday last (Dec. 6), about ten at night, five companies of infantry, preceded by 50 of the secret police, appeared in the Rue de Constantine, where they arrested all the men they found in their apartments, to the number of 260. The street leads up to the Rue St. Denis, and the appearance of the military and police in the neighbourhood, with the success attending their visit, spread dismay among the workmen of the a armed district. The result was that some three hundred left their homes, and darted through the streets. The gates were closed, to provide for which an attempt at escape, the transverse streets were well posted with infantry and cavalry, and every one of the wretched men fell into the hands of the various guards. Those who resisted being captured were shot upon the spot, and the bodies hastily carried away, while the remainder were led before the court-martial, and, being deemed dangerous characters, were shot at midnight in the Champ de Mars, the sounds of the musketry being heard for about two hours, varied by brief intervals of cessation.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Notwithstanding the necessarily provisional character of the Government of France since the *coup d'état*, until the universal suffrage of the nation on Sunday next (to-morrow) confirms or rejects the assumption, on a new basis, of the chief power of the State by Louis Napoleon, the Executive does not in any way stay its hand, but proceeds daily with the most active and various measures in the form of decrees, which are issued by the President and his Ministers, apparently under the firm and certain conviction that a large majority of the French people will vote in the affirmative on the proposition submitted to them, whether Louis Napoleon shall be, for the next ten years to come, supreme and irremovable ruler of the nation, with powers to frame a new Constitution —yes or no.

Amongst those decrees the principal are—

1st. A decree which definitively constitutes the new Consultative Commission. It is composed of 78 names: amongst them are those of Count Argout, Governor of the Bank of France; Count Bondy, P. Barrot, former Ministers; Barthe, Minister of Justice under Louis Philippe, and now President of the Cour des Comptes; De Beaumont (Somme), Billault; Cartier, ex-Prefect of Police; Chaix D'Estange, Bravyn de Lhuys, Dumas, and Lacrosse, former Ministers; De Montalembert, De Mortemart, De Mouchy, Noailles, Odier, ex-Peer of France and Comptroller of the Bank; De Parieu, Rouher, and Schneider, former Ministers; De Segur d'Aguesseau, Sipydour, De Thorigny, late Minister; Troplong, First President of the Court of Appeal; Vaisse, former Minister; De Wagram; Generals Barsguay D'Hilliers, Preval, Le Castellane, Marshal Excelmans, Generals De Grammont, De Gouvy, D'Hautpoul, De la Hitte, Magnan, Admiral Cecille, &c. The Commission begins to meet on the 23d inst., to count the votes for the election of the President, in pursuance of the decree of the 2d inst. The Secretaries-General of the late Council of State and National Assembly are appointed to the same office in the present Commission.

2d. A decree appointing a section, to be known by the name of the Administrative Section, to fulfil the functions assigned to the Consultative Commission by Art. 3 of the decree of December 11. The administrative section is to be presided over by M. Baroche, the Vice-President, and is to enter immediately on its functions. A decree of the Minister of Justice to divide the section into committees corresponding to the different ministerial departments. The whole number of members in the section, independently of M. Baroche, is 32.

3d. Another decree enacts that the matters to be submitted to the "Section d'Administration" of the Consultative Commission shall be—the projects of regulations of public administration, and of decrees on the registration of bulls and other acts of the Holy See; proceedings against ecclesiastical authorities for abuse of power; authorisation of religious congregations, and the verification of their statutes; authorisation of proceedings against agents of the Government, natural-stations, maritime captures; the creation of tribunals of commerce, or of *conseils de prud'hommes*; concession of portions of the domain of the state and concessions of mines; the authorisation of *sociétés anonymes* and tontines, the establishment of departmental roads, canals, branch railways, &c. Certain other matters are to be submitted to committees.

4th. A decree dissolving the 6th legion of the National Guard of Paris. The reason assigned for this step is, not that the inhabitants of the district of Paris corresponding with the 6th legion sympathise with the enemies of order, but that they are placed in a most difficult position from the nature of their streets, which present well-intentioned citizens from easily assembling, and expose them to the danger of being disarmed piecemeal.

5th. A decree declaring the departments of the Jura, Aveyron, and Vaucluse in a state of siege.

6th. A decree constituting a board of health for the city of Paris.

7th. A decree for raising funds to build a Bourse or Exchange at Marseilles, and for other improvements in that city.

8th. A decree establishing pensions for old soldiers of the first Republic and the Empire, and opening a credit of 3,700,000 francs on the budget of 1852 for that purpose.

9th. A decree declaring the cessation of the extraordinary missions confided to M. Durn. in the eight departments of Brittany and Vendée; and to M. Cartier in the three departments of the Centre; and to M. Berard in the Somme.

Several changes also are made among judicial functionaries, and numerous decrees have appeared conferring promotions or orders in the Legion of Honour on persons who distinguished themselves at the late bombardment of Salee and Rabat. Admiral Dubourdieu is promoted to the grade of Grand Officer, three captains to the grade of Commander in the Order, four persons to the grade of Officer, and 21 to that of Knight. There is also decreed, principally for the army, so large a number of promotions in the Legion of Honour, that the names fill seven columns of the *Moniteur*; 12 persons are named Commanders, 35 Officers, and 286 Knights.

Whilst legislation by decree is thus extensively carried on, Louis Napoleon finds time, it is said, to devote two hours a day, with M. M. Rouher, Baroche, and Troplong, to framing his new Constitution, the chief features of which, according to the correspondent of the *Times*, are as follow:—

A Council of State to be entirely named by the President of the Republic.

The Senate to be composed of 150 members, 75 of whom are named by the President, and 30 by the Councils-General, from a list of candidates made out by the Executive Power.

The Legislative Corps to be named by universal suffrage, but after the following manner:—A *scrutin* to take place, at the commune, for the nomination of an elector for each commune; and the communal electors thus chosen by universal suffrage, and amounting to 36,000 in number, to finally name 500 representatives. From that list of 500 to name or call to the Presidency of the Republic to select 250 representatives wherewith to form the Legislative Corps. The President of the Republic to be elected for ten years, with the title of Regent of the Republic; to be responsible, but not to be subjected to impeachment directly by the Legislative Corps; the people alone to have the power of expressing its opinion on the Executive Power by naming, three times consecutively, a Legislative Corps whose refusal of the Budget shall be considered as the condemnation of the policy of the Regent; and the result of such condemnation to be the retirement of the Regent from power. The press to be free, but not to be allowed to call in question matters relating to religion, the rights of property, and the organisation of society as established and recognised by the order of the land. Each session of the Chamber to be for six months at the utmost. Cliques of a less general kind may be appended for the abolition of the most unpopular of the imposts, viz. the *octroi* duties and the tax on spirituous liquors. In a word, the new Constitution to be—with some modifications rendered necessary by the progress and change that have occurred since then—the reproduction, or rather the imitation, of that of the year VIII., and which, with some difference, is the system explained by the President in his work, entitled "Les Idées Napoléoniennes."

With respect to the votes of the various political parties at the ensuing Presidential election, the ultra-Democrats are so disorganised that it is impossible to ascertain whether they will vote or not; and the Legitimists are divided on the matter. One of their chief leaders, M. de Montalembert, has published a letter in the *Univers*, in reply to numerous applications made to him for advice as to what course to follow at the election. M. de Montalembert examines each of the three paths open to the elector. A negative vote, he declares, would be an encouragement to anarchy, an absolution of its frightful excesses; abstention, cowardice, as long as the demagogic monster roars; and he arrives at the conclusion that an affirmative vote is the only one worthy of a good citizen and a good Christian. On the other hand, MM. de Vatimesnil, Sauvaire, Barthélémy, and other members of the Legitimist committee, have declared explicitly that they will vote against the President. Manuscript circulars in that sense have been sent to different parts of the country. It is, nevertheless, pretty certain that a vast number of votes will be obtained by Louis Napoleon, simply because his election is the only alternative from anarchy.

The *Siècle* was suspended for a day, because of its urging the Democrats to vote.

The following protest against the late *coup d'état* has been published by M. Larochejacquelin, the leader of one section of the French Legitimists:—

TO THE FRENCH NATION.

An act whose results are incalculable has just been perpetrated. The Constitution is overthrown, the National Assembly unlawfully dissolved by the executive power, the freedom of a great number of representatives violated, and the arbitrary caprice of an individual is set up in place of law. Long have I desired to raise my voice, and call on France to put an end to the succession of adventurers who dishonour her; then might we save France and those principles without which no nation can be truly great. But my endeavours were unhappily understood and thwarted. Since the appeal to the nation, as it is made by M. Bonaparte, is altogether wanting in those conditions and features which alone can make it the honest expression of freedom, and since this appeal to the people, I protest, with all the energy of my conviction against that act, and the illegal proceedings by which it is accompanied. Personal preference and compulsion are alike employed to give a particular direction to the free exercise of the national will in a manner which wounds every conscience, and must arouse the indignation of every free man. The constitutional prerogatives which M. Bonaparte, under the hollow pretext of a delegation, usurps, would hurl us once more into inconceivable confusion. The time for Cæsars cannot have come for France. As a defender of the principle of the national sovereignty, I must loudly protest, even if I stand alone, against the boundless violation of this principle. May my sad forebodings for my native country not be realised. May France see at length that her help lies in her own hands, and that in a Republic no one has the right to dispose of the destinies of the land except according to the free and full expression of the public will.

On the subject of the alleged plot of certain members of the extinct National Assembly to depose Louis Napoleon, in case the Assembly had passed the project of the questors to place an army at their disposal, which was submitted to the House immediately after the recess, and a few days prior to the *coup d'état*, the *Constitutionnel* publishes some papers found in the apartments of M. Baze, one of the questors, and which seem to prove that not only a plot of the kind existed, but that all measures proper for its successful issue had most carefully been taken. The seizure of these papers, says the *Constitutionnel*, rendered evident the existence of a plot. In fact, all the decrees relative to direct requisition were ready; there were seized not only the minutes, but all the copies and other documents necessary to be given in the proper quarter; all this was done unknown to M. Dupin, but the papers, nevertheless, bore the presidential seal. The first decree, that which confided to a General-in-chief the command of the troops charged to protect the National Assembly, is as follows:—

The President of the National Assembly, considering Art. 32 of the Constitution, which says, "The Assembly appoints for the time the place of its sittings, it fixes the number of the military force necessary for its safety, and disposes of it." Considering Art. 113 of the regulations of the Assembly, which says, "The President is charged to watch over the internal and external safety of the National Assembly." To this effect he exercises, in the name of the Assembly, the right confided to the legislative power by Art. 32 of the Constitution to fix the number of military force necessary for its safety, and to dispose of them—

Orders M. ——, immediately after the *command of all the forces, both army and National Guard* stationed in the first military division, in order to guarantee the safety of the National Assembly.

Given at the Palace of the National Assembly, the——

The second decree is as follows:—

The President of the National Assembly, considering Art. 32 of the Constitution and 112 of the regulations—Orders every General and every Commandant of a corps or detachment, as well of the army as the National Guard, stationed in the first military division, to obey the orders of General ——, charged to guarantee the safety of the National Assembly.

Given at the Palace of the National Assembly, the——

M. Bazé and the other persons implicated in this affair are to be brought to trial immediately.

The aged General Lamoricière and General Vaillant have been nominated Marshals of France. M. Vaillant is an officer of engineers, and was second in command at the siege of Rome; and it is set forth in the decree, that it was principally owing to his talents the Roman expedition was successful, and he was raised to the highest rank in the French army. This was done to insult General Oudinot, who had the chief command at Rome, and on whom Louis Napoleon thus takes revenge for having allowed himself to be nominated to the command-in-chief of the (almost) Parliamentary army, by the fraction of the National Assembly which met at the *mairie* of the 10th *arrondissement* on the morning of the *coup d'état*.

General Oudinot has written an extremely energetic letter to the Minister of War, in which he expresses his indignation at the insult done to him in the matter of the nomination of Vaillant for the promotion of General Vaillant. He has also written a letter to the Pope on the subject. The General, as well as General Lauriston, has been released from the fortress of Mont Valérien, where they were confined since the 4th instant. The other Generals and Ex-Ministers, who were confined at Vincennes, Mazas, and Mont Valérien, have also been set at liberty:—MM. Arnaud (du Var), Eugène Sue, Cyrus, Chamiot, Charbonneau, Chanet, Crémieux, Jules de Lasteyrie, Lagarde, Thuriot de la Rosière, Nettement, Quentin-Bauchart, Garnet, Gautier, and Kestner.

MM. Créton and Duvergier de Hauranne are still confined at Vincennes, and MM. Pascal Duprat, Piscatory, Anthony Thouret, Latrade, Emile Péan, Renaud, and Besse at Mount Valérien.

Of the prisoners at Ham, General Cavaignac has been set at liberty. Nothing has been discovered to indicate that he had taken part in any plot, conspiracy, or intrigue against Louis Napoleon, and his arrest is now declared to have been a mere measure of precaution. The General, who is on the point of being married, intends, it is said, proceeding to Italy with his bride. The grandfather of the future Madame Cavaignac, M. Odier, ex-peer of France, Comptroller of the Bank, is one of the members of the "Consultative Commission" just named by the President. Nothing is said about the recess of Changarnier and Lamoricière. They will probably be kept in durance for some time longer; the well-known hostility of the former to Louis Napoleon, and the fiery and unscrupulous character of the latter, rendering it inconvenient to have them at large until the President's position is more firmly established.

On Tuesday, the anniversary of the translation of the remains of the Emperor to the Invalides, the regular annual banquet of the old officers of the Imperial Guard took place at the Frères Provençaux. Marshal Excelmans presided; and among the other officers present were Generals Petit, Schramm, Magnan, Gentil, Lafontaine, Montmarie, Hermion, Chatry-Lafosse, &c. At the dessert, after the usual first toast, "To the memory of the Emperor," had been drunk, Marshal Excelmans, after warmly expatiating on the eminent character and qualities of the President of the Republic, proposed the following toast, "Glory and gratitude to Louis Napoleon Bonaparte, the saviour of the country and of civilisation." The toast was received with the greatest enthusiasm, and at repeated cries of "*Vive le Président de la République!*" "*Vive le Prince Louis Napoleon!*" General Petit, the vice-president, then gave "*A demain!*" which he introduced by a short but energetic notice of their services. This toast was drunk amidst loud cries of "*Vive l'Armée!*" "*Vive le Général Magnan!*" In reply to this compliment, General Magnan said, "No, my

mrades, I have done nothing more than my duty. It is not to me that ese praises are due, but to the brave soldiers who have supported so uch fatigue, and who, by their devotedness to the cause of order, have eserved well of their country." Dec. 2d was fixed on for the day of esting next year.

The Minister of the Interior has addressed a letter to the prefects, ith orders to enforce the decrees of transportation rigorously against anvicts who have broken their ban, and persons convicted of affiliation secret societies.

A circular to the prefects orders the dissolution of all doubtful corps of ational Guards.

The accounts from the provinces represent the lately-disturbed districts as restored to tranquillity.

UNITED STATES.

The accounts from New York this week are to the 6th inst. They ve chiefly taken up with the opening proceedings in Congress, and the resident's annual message, which is a document of the usual prolixity such state papers.

M. Kossuth and suite arrived at New York on the 5th, and landed on he following day amidst the enthusiastic acclamations of the multitude athered together to witness his disembarkation. Several congratulatory addresses were soon afterwards presented to him, to which he iefly replied, apologising for his brevity from the indisposition under hich he was labouring.

Congress (the thirty-second session) was opened at the Capitol in Washington, on Monday, the 1st inst. The present sta te of parties in 9th Houses is as follows:—The Senate consists of—Democrats, 34; Whigs, 24; Free Soilers, 2; vacancy, 1: total, 62. The House of Representatives has—Democrats, 143; Whigs, 90.

Notice of several important bills was given immediately on the formation of the House in the Senate, one being for a railroad from the Mississippi to the Pacific; another for a reduction in newspaper postage; another for a line of steam-ships from California to China. Notice f a motion was given relative to the recognition of Kossuth; and also of a formal resolution expressing the sympathy of Congress for Smith O'Brien, Meagher, and other immediate associates; authorising the President to open a correspondence with her Majesty's Ministers appealing to the magnanimity of the British nation for the liberation of the prisoners, and concluding with an offer to receive them upon the hospitable shores of the United States.

The President's Message was read on the 2nd. Its various topics are comprised under the following heads: viz., Cuba; the Right of Search; he Spanish question, and foreign relations generally, including reciprocal trade with Canada, Oregon, the Turkish Government and Kossuth, he Sandwich Islands, Mexico, the Tehuantepec Railway, Nicaragua; the finances; the tariff; Californian survey; establishment of an agricultural bureau; aboriginal tribes; the census; bounty lands; harbour nd lake improvements; departments of war and navy; the Post-office; nd miscellaneous questions. These various and numerous subjects are treated of at such length that the message occupied seven closely-rinted newspaper columns, but the main features of the message, as far s regards the matters of interest to European readers, can be presented in a very small compass.

The President begins with congratulations on the maintenance of peace abroad and of domestic harmony and prosperity at home; and then proceeds to review the affair of the Cuban invasion. He complains hat certain Cubans resident in the United States have a second time made that country the scene for the equipment of military expeditions against the possessions of her Spanish Majesty. Too severe judgment cannot be passed upon those who, by fraudulent representations, led those young men into peril and disgrace. Though the invaders had forfeited the protection of their country, no proper efforts had been, or will be, spared to obtain the release of those now in confinement, for the sake of their families and friends. The policy of neutrality and non-intervention which the United States is recommended, the true mission of the American Government being, he says, "not to propagate our opinions, to impose upon other countries our form of government by artifices of force; but to teach by example, and show by our success, moderation, and justice, the blessings of self-government and the advantages of free institutions" He then refers to he correspondence on the Cuban affair with England and France, which he submits to Congress. That correspondence maintains the principle, in the part of the United States, that, in every regularly documented merchant vessel, the crew who navigate it and those on board of it will find their protection in the flag that is over them. No American vessel can be allowed to be visited or searched for the purpose of ascertaining the character of individuals on board; nor can there be allowed any search by the vessels of any foreign nations over American vessels on the coast of the United States or seas adjacent thereto.

The measures which led to the liberation of Kossuth, and the acknowledgments of the Hungarian chief for the success of those measures, are briefly and rather coldly alluded to; and "it is recommended to Congress to consider in what manner General Kossuth and his companions, brought hither by its authority, shall be received and treated."

Government was exerting itself to bring to completion the arrangements in regard to the Tehuantepec Railroad.

With respect to the finances, it is stated that the aggregate receipts for the fiscal year, ending June 30, were 52,312,979 87 dollars, which, with the balance in hand at the commencement, made the means of the Treasury for the year, 58,017,524 36 dollars, against an expenditure of 48,005,878 96 dollars. The public debt, exclusive of stock authorised to be issued for Texas, was 62,560,395 26 dollars. The expenditure is estimated at 528,922,991 91 dollars, of which 33,343,198 dollars is for ordinary purposes of Government, and 9,549,101 11 dollars for the purposes connected upon the acquisition of territory from Mexico. It is estimated that there will be an unappropriated balance of 20,386,443 20 dollars in the Treasury on the 30th of June, 1853, to 362,379,213 51 dollars public debt on the 1st of July following.

The exports and imports of the country are then reviewed, and conclusions unfavourable to free trade are drawn: specific duties and a revision of the tariff are, therefore, recommended, and protection advocated.

The miscellaneous questions may be grouped as follows:—An agricultural bureau is put forward as a requisite. Census returns had been completed in all the States except California. A river and harbour improvement bill is projected. The army required to be increased, owing to the Indian outrages on the Mexican frontier. An extra allowance of men for California's expedition in search of Franklin is approved of: also the formation of a navy yard at California. A commission to settle the private claims against Government is wanted. The fugitive Slave Bill is discussed, and a determination to persevere in enforcing its provisions is announced.

The report of the Postmaster-General and the Secretary of the Interior are issued. They are also voluminous documents.

With respect to the general news, we learn from Texas, under date the 21st ult., that Colonel Rogers has at length succeeded in effecting a treaty with the Camanche Indians. Colonel Rogers recovered twenty-seven white captives from the Camanches, who had been in bondage for some time.

From California there are accounts to the 1st of November. The mines were very productive, 3,000,000 dols. in gold dust being brought by this arrival. Much progress was being made in agriculture, and the province was generally prosperous.

In political matters we find a notice of the proceedings of a convention assembled to consider the propriety of dividing California into two states, southern and northern. The language of a large number of the speakers would leave no doubt as to the final issue to which this division tends. The establishment of a new slave state is manifestly the aim of at least some of the promoters of this scheme.

Expeditions were fitting out for the Sandwich Islands. It was understood that these expeditions would take possession of the islands, and hold them either in their own right for ever, or have them annexed to the United States. The *Gamecock* and the *Fremont* were the vessels which had already sailed on the expedition, which would number about 500 men.

Some reported cruelties of Messrs. Waterman and Douglass, captain and mate of the clipper *Challenge*, to the seamen on the voyage, had caused the most angry excitement at San Francisco, and they narrowly escaped being lynched by the mob.

The United States steamer *Prometheus*, on leaving the harbour of San Juan, on the 21st November, was fired into twice by the British brig of war *Express*, and compelled to return to her anchorage, and pay certain disputed port dues to the owners and authorities of the Mosquito territory. Much angry feeling had been manifested by the United States subjects in the matter; and by this mail despatches have come from the American Government to its Minister in London, having for its object the demand of an immediate explanation of the circumstances connected with the affair.

CANADA.

The parliamentary elections for Upper Canada were appointed for the 10th of December; some few sooner and some later. It is thought the Reformers are likely to return a majority of thirty members to the new House in both sections of the province.

The religious denominations of the members of the new Cabinet are thus stated:—Messrs. Caron, Morin, Taché, and Drummond, Roman Catholics; J. H. Morris, Church of Scotland; Messrs. Hincks and Young, Unitarians; Dr. Rolph, Congregationalist; Mr. Richards, not known. Of the Solicitors-General, one is Roman Catholic, Mr. Chauveau; and the other, Mr. J. Ross, Episcopalian.

Much satisfaction was expressed by the Canadian press at the great success of Canada at the Industrial Exhibition. The number of medals and prizes that Canada has gained is ten times greater in proportion than the United States.

INDIA.

The intelligence from India this week is more varied and interesting than any we have had by the last three or four mails. The dates are—Bombay, Nov. 17; Calcutta, Nov. 7.

Sir Colin Campbell quitted Peshawur on the 25th of October, in command of a force of nearly 2500 men, for the town of Michnee, inhabited by the Momunds, an Affghan tribe, from whom our outposts had received considerable annoyance, and the Peshawur merchants and traders who supplied the troops with food had suffered pillage and violence. The force consisted of the 5th company 1st battalion Artillery, with No. 17 light field battery, the 2d company Sappers and Miners, the 2d Irregular Cavalry, two companies of the Guide Corps, two companies each of her Majesty's 81st and 98th Foot, including the light company of each regiment; the 66th or Goorkha corps, and a wing of the 71st Native Infantry. This force reached Michnee on the 27th, when they found it evacuated, the people having fled from our approach. They fired on the men from their hiring-places, but our people suffered no harm therefrom, their shot falling short of our camp. On the 28th the fort of Rehimdad Khan was blown up; large stores of corn which had been laid up by the Momunds for winter provisions were set fire to, and their goods and chattels thrown into the river.

In the Dehra Ismail Khan district an outpost of the 5th Punjab Cavalry, consisting of 20 men, had been surprised by 200 Sheorams horse: five men were killed and 10 wounded; the remainder were saved only by the timely arrival of a reinforcement of 20 of the mounted police corps. The enemy then retired.

Dost Mahomed's death has not been confirmed. The last accounts from Cabool represent him to have been very unwell, but the old warrior was likely to survive some time longer.

The pecuniary difficulties between the Indian Government and the Nizam have at length been finally settled. His Minister some months since paid off £40,000 of the sum due, and the remainder was promised by the beginning of the month of November. This he found it impossible to perform from his own resources, but the Nizam has been persuaded to pay a further sum of £40,000 from his private treasury.

Her Majesty's steamer *Nox* had been ordered to Rangoon, in the Burmese empire, to demand satisfaction for injuries done to English merchants by the Burmese Governor of the place.

The steamers *Inconstant* and *Scourge* were lost in a violent gale which visited Calcutta on the 22d and 23d of October. No lives were lost.

The Calcutta Railway is proceeding rapidly. The electric telegraph to Diamond Harbour is in constant operation, and is found to answer extremely well.

On the 21st of October the Governor-General left Simla to pay some state visits to the Maharajah of Putteala and other chiefs. He returned to the hills on the 13th of November, and is expected at Calcutta by the second week in January.

CHINA.

The accounts from Hong-Kong are to October 30. There is no authentic information from the scene of rebellion in the interior of China. All that is known with certainty is, that the insurgents continue to hold their ground, and Seu and the Imperial troops do not appear to make head against them.

The Peninsular and Oriental Company's receiving-ship *Fort William* caught fire on the 21st of October, and would have been burnt to the water's edge had it not been for the assistance rendered by the ships of war in the harbour. The damage done is not considerable, and is confined to the upper works.

AUSTRALIA.

The intelligence received from Sydney and Melbourne is of great interest. It comes down to the middle of August.

Fresh discoveries of gold had been made on the property of Mr. Wentworth, at Frederick's Valley. Another large piece of gold had been found at Ophir, which weighed 31 ounces 10 dwt.; it was purchased either by or for Captain Erskine, of her Majesty's ship *Havannah*. The intelligence from the diggings generally was favourable. The summer was looked forward to with the confidence of a large production. Mr. R. Campbell has tendered for the purchase of all the gold which the Government might receive during the ensuing two months, at £3 8s. 4d. per ounce.

The hundredweight of gold, noticed by us on arrival of the last India and China Overland Mail, was seized by Government under the pretence of a royalty being due upon it. Against this step Messrs. Thacker and Co., the holders, protested. Subsequently Government communicated with Messrs. Thacker and Co., and informed them that the gold seized by Commissioner Hardy would be given up on their entering into a bond to pay the Government a royalty of 10 per cent., should the home Government, on a representation of the facts of the case, demand it. To these conditions Messrs. Thacker and Co. had no alternative but to submit, although they were the innocent purchasers, there being not a semblance of collusion by passing it into third hands to avoid the royalty as claimed.

From Victoria we have Melbourne advices to the 19th of August. The Lieutenant-Governor had issued a notice cautioning against gold-digging without taking out licences issued by the Government. At Hollingvorth, 50 miles from Geelong, there were eight cradles at work, and parties were realising from half an ounce to two ounces. Gold had likewise been found at Major Newman's property, Deep Creek, and at Heidelburg, near Melbourne. Gold had been discovered on the Yarra, on Mr. Hawdon's property, by the proprietor, who, having lately returned from Twofold Bay, where he discovered gold in abundance, fancied he perceived a geological resemblance in the two localities. He subjected a handful of clay to examination, and discovered three grains of gold. Parties in search of Franklin were instantly employed at this spot, which is but four miles from Melbourne. Gold has also been discovered in the very heart of Melbourne, by two children, while rooting about for amusement in the soil. The sample found weighed half an ounce and ten grains, and had a piece of milk quartz adhering to it. A bed of clay quartz, about fifteen inches below the surface, had been subsequently discovered, which it was expected would prove productive. Of the Victoria diggings, sixteen miles from Melbourne, it is said that the most productive spots were those where the slate formation abounded, from the interstices of which several small nuggets had been extracted. The slate averaged about two feet from the surface, and the lower the miner penetrated the more successful he proved.

The ship *Bondscar*, now on her way to England, has on board gold from the diggings valued at £28,000. Other and regular shipments would follow; and the *Sydney Morning Herald* asserts, and vouches for its correctness, the great fact that gold exceeding £10,000 in value to £5000 reaches Sydney from the gold-fields each day. Reports from the Bathurst country note that the diggings at the Turon continued remunerative. The average for each man was about £1 daily. The Ophir diggings were still frequented, but were not equal to the Turon diggings. Fresh discoveries of gold were of daily occurrence.

With respect to the anti-transportation movement, we learn that a monster league meeting had been held at Sydney, at which was carried a petition to her Majesty for the removal of Earl Grey from her council. This firm and unequivocal exhibition of the colonists' feelings must speak volumes. Referring to the document, the *Sydney Press* says, "One thing at least cannot be said by his minions as an objection to it, that it was Dr. Lang and his agitation that did it;" the truth being, as the colonists aver, Earl Grey and Sir Charles Fitzroy have done it, and they are denounced as the real enemies of her Majesty's Australian colonies. It is not expected that the petition will reach her Majesty; and the *Press* says:—"We doubt whether the petition will reach her Majesty. The unworthy etiquette of Downing-street forbids it—unless a deputation were sent to present it. But it does not much matter. Let it be published to the world. The right, the dignified, the honourable way to the throne, if it cannot be direct, is through the press."

NAVAL AND MILITARY INTELLIGENCE.

THE ARCTIC SEARCHING EXPEDITIONS.

Advices from California mention the arrival of her Majesty's ship *Dædalus*, Captain G. G. Wellesley, at San Francisco, on the 22d October, from Port Clarence, Behring's Straits, which she left on the 1st of that month. She brought as passengers Lieutenant Cooper and Dr. Simpson, of her Majesty's ship *Plover*, which vessel had returned to Port Clarence from her summer expedition, having been unable to penetrate further north than 71 degrees, being 3 degrees short of their excursion last year. The *Plover*'s consort had not returned to her winter quarters at the sailing of the *Dædalus*. No vestige of the expedition of Sir John Franklin was discovered; and it was the opinion of the two officers from the *Plover* who came passengers in the *Dædalus* that all further attempts to find traces leading to the discovery of the Arctic voyagers will prove utterly fruitless.

The following is the report of the *Dædalus*:—

"Her Britannic Majesty's ship *Dædalus*, Captain G. G. Wellesley, from Port Clarence, Behring's Straits, October 1, arrived in our harbour yesterday, and anchored at Sancillo. The *Dædalus* was despatched from Valparaiso last spring to visit the provision which is kept at Port Clarence as a *dépôt* and point of succour in case either Sir John Franklin's expedition or the other vessels in search of him should be obliged to quit their ships and take to their boats. The *Dædalus* arrived at the edge of the ice (which was then close to St. Lawrence Island) in the middle of June, when she fell in with a large fleet of whalers, principally Americans, waiting for an opening to proceed northward. There had been but little done in taking whales this season, although large numbers of them had been seen in the Arctic seas in the early part of the season. Most of the ships had gone south. Captain Wellesley thinks that all the vessels had passed the Straits for the south before the *Dædalus* sailed. The summer season is later than usual, the first snow having fallen on the 1st of October, the day the *Dædalus* sailed from Port Clarence."

Captain Wellesley reports large quantities of ice in the Straits, which were in fact almost blocked up. The *Dædalus* had several narrow escapes, and was at one time in imminent danger of foundering.

FURTHER SEARCH FOR SIR JOHN FRANKLIN.—In addition to the *Pioneer* and *Intrepid* screw steamers employed in the recent expedition, the *Phœnix*, a much larger screw steamer, of 260-horse power, which was taken up from Woolwich to Deptford lately, is ordered to be fitted and strengthened at the latter dockyard, for service in the Polar Seas. The excellent arrangement of sending three screw steamers to Wellington Channel has been made in order to avoid similar delays to those experienced by the *Pioneer* and *Intrepid* steamers during the recent expedition, when they had to tow the *Resolute* and *Assistance* sailing vessels. In the event of its being considered necessary to send sailing vessels with stores to the Arctic regions next spring, they will be entirely independent of the steamers, and the latter will only have to act in concert with each other.

FURTHER REINFORCEMENTS AT THE CAPE.—The Horse Guards have determined on sending Sir Harry Smith's demand for further reinforcements at the Cape, by sending by steam-vessel the battalion of Rifles now at Dover; and orders have been sent to Dover, to the battalion, to hold themselves in readiness for immediate embarkation. It was at first intended to send them out by her Majesty's steam-frigate *Birkenhead*, at Portsmouth; but it is now decided that they shall proceed to the Cape in the new iron screw frigate *Megæra*, the Sheerness, the Hoffmeister, and the officers and crew of the *Cyclops*, just returned from the Cape, having been turned over to that ship, the *Megæra* having been thoroughly fitted for the conveyance of troops. Like the *Vulcan* she has received Grant's distilling galley, and possesses every comfort and convenience for a regiment. The Rifles, we believe, are above 600 strong.

ROYAL MILITARY ACADEMY, WOOLWICH.—On Tuesday a board of officers, consisting of Lieut.-General Sir John F. Burgoyne, K.C.B., President; Lieut.-General Sir H. Dalrymple Ross, K.C.B., Deputy Adjutant-General, Royal Artillery; Major-General Griffith G. Lewis, C.B., Royal Engineers, and Lieut.-Governor of the Royal Military Academy; and Brigade-Major Walpole, Royal Engineers, assembled in the hall at the Royal Arsenal, for the purpose of examining the gentlemen cadets who had finished their course of study in the practical class, preparatory to their passing for commissions in the Royal Artillery or Royal Engineers. The gentlemen cadets of the practical class were examined in surveying and fortification by Lieut.-Colonel Stotherd, Royal Engineers, and in practical artillery by Captain John Travers; and at the conclusion the names of those who had passed for commissions in the Royal Artillery or the Royal Engineers were announced. Lieutenant-General Sir John F. Burgoyne, after congratulating the gentlemen cadets who had passed, presented appropriate prizes to the several gentlemen to whom they were awarded.

ROYAL MARINES.—Lieutenant-Colonel Frail, of the Woolwich division, has been placed under orders to join the *Britannia*, 120, fitting at Portsmouth, as the flag-ship for the Mediterranean station, where he will serve, as Field-officer of Royal Marines, immediately under the Admiral Commanding. Brevet majors and captains have hitherto been the highest rank of officers of that corps serving in flag-ships at any of the stations of her Majesty's ships in commission.

RECRUITING BY PENSIONERS.—It has now been decided upon that the experiment for the enlistment of men for the army by Chelsea pensioners shall be tried at first in Scotland; and it will accordingly commence on the 1st of January, under the superintendence of Lieut.-Col. Tulloch.

THE GUARDS' BARRACKS, ST. JAMES'S PARK.—The Board of Ordnance, having agreed to build officers' quarters as an addition to these barracks, have called for tenders for the erection of the works.

Having a rather thick fog on Friday evening (last week), at Cowes, Isle of Wight, her Majesty's steam-frigate *Cyclops*, Commander Hoffmeister, last from the Cape of Good Hope, went ashore, about three or four miles to the westward of the town.

Mr. Augustus Hill Bradshaw, late accountant-general at the Army Pay-office, died on Saturday last at an advanced age. This event affects a saving of two large pensions to the public.

Casualties by death in the armies of India since the departure of the mail on the 3d Nov.:—Madras: Retired Major A. Gordon, in Europe. Bengal: Retired Major H. W. Leacock, in Europe.

BURSTING OF A STEAM-BOILER.—A most frightful accident occurred at Marseilles on the 14th instant. The steamer *L'Industrie* was to have left the harbour at nine o'clock for Corsica and Leghorn. All the mercantile affairs on board, and several passengers on board, when the boiler burst, blew up the decks, scattered the goods in all directions, killed the engineer and a fireman, and seriously wounded twelve persons. Amongst the wounded are some Englishmen. The chambermaid of a Mr. Cockburn is burnt. Mr. Cockburn is burnt, but not seriously, from the hip to the foot; his lady escaped unhurt. An English child, eight years of age, is perhaps mortally wounded. Eight of the passengers were taken to the hospital. Great credit is due to Captain Combes, commander of the *Ville de Marseille*—the same which lately ran down the *Ville de Grasse*—for his exertions in saving the passengers from their perilous situation. The instant he heard the explosion, he lowered his boat and flew to the aid of the victims. Had the accident taken place an hour later, the loss of life, in all probability, would have been immense, as all the passengers would have been on board. A few minutes before the explosion, a boat, laden with eight ladies, several of them English, left the entrance of the harbour for the steamer. The ladies, afraid of being behind time, were very angry with the boatman for not rowing quicker. Happily for them the waterman was sluggish, for he just reached the steamer at the moment of the explosion of the boiler. The boiler burst in the direction of the stern, which accounts for the great injury done to the passengers.

THE MUTINY ON BOARD THE BRITISH SHIP 'FAWN."—From the Ceylon papers we learn that on the 28th September, the barque *Fawn*, Alfred Rogers commander, belonging to Calcutta, sailed from Singapore on her return voyage from China to Calcutta. She had been repairing there for three weeks, during which time her crew of Bengalee Lascars refused to work and to proceed in her, although four months' pay was due to them. A new crew of Javanese and Malays, was supplied by a shipping master, who was warned Captain Rogers against ill-using them, as the Malay character is revengeful and so widely different from that of the Bengalee. It appears that the vessel held on her course for six days without any untoward occurrence, but on the sixth day the Lascars found the burra-tundal coming down the forehatch, whereupon he not only kicked and abused him, but brought him on deck and there inflicted corporal punishment in presence of the whole crew. About midnight the Malays and Javanese mutinied, and murdered the captain, who was sleeping on deck; about daylight the second mate was killed, being almost cut to pieces. The first mate, and Mr. Ephick, a passenger, defended themselves against the cabin for nearly 24 hours after the captain's death, when the former jumped out of the port, and was drowned. Ephick died fighting with a handspike against his assailants. There were two ladies on board, Mrs. Rogers, the captain's wife, and Mrs. Bechem, her sister, the widow of a military officer, and her child. It has not been exactly ascertained how they were treated by the mutineers; but it would appear that the wretches did not intend to kill them, for they lowered them in a boat, which swamped, and the three were accidentally drowned. When the vessel was cleared of all the Europeans, they scuttled and fired her, although she had a large quantity of copper on board, a portion of which might have easily been removed. The ship finally grounded at Bruas, about fifty miles south of Penang. Part of the crew went on shore, and the remainder came to Singapore in one of the boats, arriving on the 10th. Two Bengalese who were of the party gave information at once to the resident councillor, and the police were set on the scent. Two Cochin-Chinese and three Javanese have been taken, and the Chinese are surrounded. The steamer *Hoogly* had been despatched to look on for the wrecks and the rest of the mutineers, part of whom had gone to Bruas, and given themselves up, and the burra-tundal and the rest were captured at Bruas: the arch-mover in the plot were the captain's gold watch and chain which

THE AUSTRALIAN GOLD DISTRICT.—BATHURST TO OPHIR.

GOLD-SEEKERS ARRIVING AT BATHURST, ON THEIR WAY TO OPHIR.

We abridge from the *Sydney Herald*, the following interesting narrative of the journey of a gold-seeker, from Bathurst to Ophir:—

"It rained all day; crowds of men poured into Bathurst, utterly destitute, and one came to me, evidently at the last extremity, and offered to wash for rations for a fortnight. In half an hour he brought another, whom we also engaged, as much for charity as for any use, and before night we could have had a dozen on the same terms. As it rained all day, we sent the men on with the dray knowing that we could overtake them before they could reach the 'diggins.'

"May 31st.—We started on foot, and about five miles out met a Sydney gentleman walking, having lost his horse the day before, and camped out all night *in the snow*. We had counted 108 men and twelve drays going out, and we met 28 foot-men, most of them pale, miserable, and dejected, returning, besides several parties of horsemen, armed, and evidently, from their gravity, carrying gold. We stayed the night at the assistant commissioner's station, fifteen miles from Bathurst.

"1st. June.—Started again; met about 70 men leaving the diggings: all agreed that there was plenty of gold for all who went properly provided, and willing and able to work; but those who had neither tools nor provisions could not even earn their grub. We dined at the farm of Mr. Kerr, better known as 'Scotch Harry,' who is driving a rattling trade in supplying the gold-seekers with damper and mutton, at 2s. a meal. On leaving, we took a short cut, and lost our way; at length found a sheep station. Were rather coolly received at first, visitors of late having been rather too numerous for even bush hospitality; but after a little conversation, the quart pots were put down, and we were most kindly treated. We had a long conversation after supper with men engaged on the station, and were much struck with the sobriety of their views. To people at a distance, the Gold Country is a place where pieces of gold are to be picked up without trouble; and they start off, expecting to find food somehow, and quarters somewhere, as they have often done in the bush. But these men know that it is an open box forest, with severe frosts every night, sleet and snow for weeks at a time (June is the Australian winter season), without any accommodation whatever, or rations, unless paid for in hard money at three times the usual price. And so, although these shepherds all intend to give the gold a trial when they get their discharge, and their wages to fit them out, they look on the men they saw passing every day, without tools, or money, or clothes, as stark mad.

"June 2d.—In the morning the ice was thick upon the water in the ditches outside, and the ground covered with hoar frost, as it often is here. Hot days and frosty nights. After breakfast, guided by 'Scotch Harry,' who called on his way to join a party in which he is a partner, an hour's walk brought us to the edge of a precipice which overhangs the Gold Creek, and we had a first-rate view of the diggings. The Gold Country seems to consist of a mass of points of ranges (*i. e.* rock-crested hills), thrown together in confusion, but dovetailing into each other like the teeth of two saws placed close together, face to face; these teeth again being cut into smaller pieces by narrow precipitous gullies, many of them nearly as deep as the main creek itself. Small creeks twist and twine down these narrow gullies, which have a sudden bend every half-dozen yards into the Summer Hill or main creek, which twists and twines on a larger scale. The banks of the gullies are precipitous on both sides, but in the main creek there are alternate bluffs and low points, the teeth of the saw gently sloping down, diminishing in height as they do in width, till they come to a point overhung on the opposite side by a high precipice, which forms the inside nick of the saw. As we stood upon the edge of the cliff we looked down nearly two hundred feet over and along each side of the opposite point, dotted with tents and gunyahs of bark or branches, each with its fire in front sending the blue smoke up into the clear frosty morning air; some under the noble swamp oaks at the water's edge, others behind and under box and gum trees which towered one above another till the rising branch was merged in the main ridge behind. The point was occupied by about fifteen parties, cutting straight into the hill; and, as we looked down upon their busy movements, digging, carrying earth, and working cradles at the edge of the water, with the noise of the pick, the sound of voices, and the washing of the shingle in the iron boxes of the cradles, I could scarcely believe that barely two months ago this was a quiet secluded gully in a far-out cattle run, where a solitary stockkeeper or black fellow on the hunt were all that ever broke the solitude of nature. On saying so to Scotch Harry, he said that he had kept stock there for nearly twenty years, and when he came there were flocks of kangaroos: these were driven off by the cattle, and now the cattle were driven away by the gold-diggers. He told of two who had gone mad—one, a shepherd in the neighbourhood, found a piece while poking about his run; it was a chance piece, and not accompanied by five or six more, but he was not satisfied, and continued searching until from excitement he went mad. The other was a man who, after starving two days, found 5 lb. weight, fainted repeatedly, and is now in confinement. Kerr said that two months ago hardly a traveller passed his house in a week; now there were crowds every hour. *He children never thought there were so many people in the world before, and wondered what it all meant.* We proceeded up the bed of the creek, passing men of all ages, working in all sorts of ways, till we came to a point about a mile further up, where the road from Bathurst intersects the creek, and where, from the difficulty of proceeding, so many drays are encamped that it is called the Township We found it would take at least two days to carry seven hundred-weight over two miles of such ridges. On the following day we succeeded in inducing nine black natives to carry them across for 1s. a day and their rations—good pay for a black. A decent-looking man came up and asked me to employ him, and I was sorry to refuse. He had been accustomed to take contracts on the roads near Sydney, and came up with a party imperfectly provided with tools, and with provisions for only a short time. Some of the party he had never seen before leaving, and on commencing operations found that four of them were tradesmen who could not stand the hard work: the work of two had to provide for six: consequently they had done nothing, and were returning. He said he was perfectly satisfied that a party fitted for the work and properly provided would make their fortunes, and he was resolved to return. Many return without giving it one minute's trial.

"The mail contractor has commenced running a coach from Bathurst to the Ophir Gold Diggings at £1 fare per head, with an allowance of 14 lb. luggage. 'The proprietor will not be answerable for accidents.' And the owner of Scotch Harry's Station, seven miles from the diggings, announces his intention of laying it out in lots as a town, under the name of 'Ophir,' and selling it by auction, in an advertisement worthy of the late George Robins—'An oasis, romantically beautiful, consisting of a small point, with thinly-timbered slopes, abundant herbage, and a never-failing supply of water from the golden sands of Lewis Ponds.'

"PAYING THE LICENCES—PEACEABLE BEHAVIOUR OF THE PEOPLE.

"Mr. Hardy passed collecting licences, so I went down to pay ours, and did not know whether to be most struck by the bearing of the miners or of the commissioner. Everything was done as quietly as if it was the quietest parish in England. Hitherto not a single outrage or robbery or even incident to cause regret has occurred among this crowd of men of all classes washing side by side The only case in which they took the law into their own hands was to destroy a cask of rum brought by a sly grog-seller. Tents are left all day with their contents without any protection. A man may walk from one end of the mines to the other with a nugget five pounds weight in his hand, and the miners will only congratulate him. A man detected cheating his party in selling gold was only turned off with ignominy: in California they would have hanged him.

"Mr. Hardy allowed all hands who had not cash a week to work for licence fees; and, if that has elapsed, a few days' grace to new arrivals. He makes it a rule that a man who has a claim for diggings shall have ten or twenty feet frontage, which is not to be encroached on by others. The licence fee is received in dust at the rate of £3 4s. the ounce. Mr. Hardy also takes gold in deposit, and keeps it until it is convenient to send it to Sydney.

"As a body, the miners are civil and obliging. Almost every one came armed to the teeth, but now firearms are at a discount: the only use made of them has been to fire salutes. The most unanimous explosion took place, first on the Queen's birthday, and secondly the night of the commissioner's arrival, in honour of the establishment of legal authority.

"The number of licences taken out to the end of the week was 600. Between two and three thousand are on the ground. The Bishop of Sydney has made arrangements for having divine service celebrated twice a day at the diggings by two clergymen, one of whom at any rate will be resident. The first service was well attended.

"Several large pieces (one lot amounting to seven pounds weight) have been found, by the last reports.

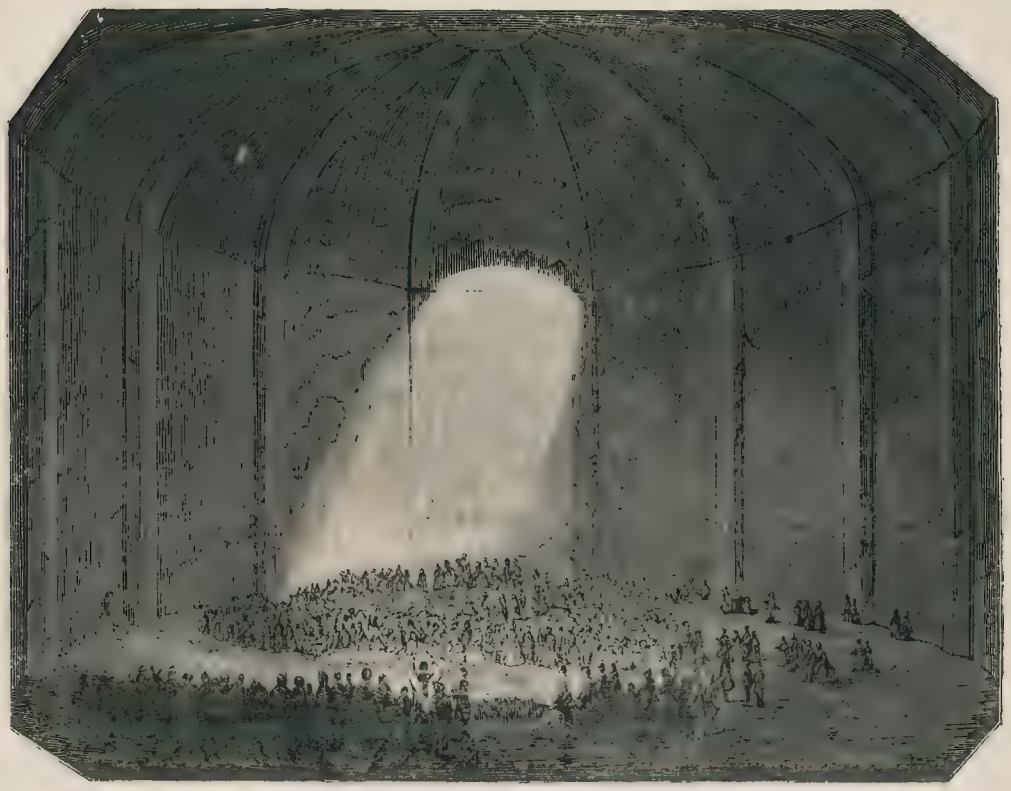
"The discovery of gold in the Turon, another tributary creek of the Macquarrie, has been officially reported by Mr. Stansbury, the Government geologist, to Mr. Commissioner Hardy, and posted up by him for the information of the miners."

The accompanying Scene is from a clever series of *Six Views of the Gold Field of Ophir*, by G. F. Angas, lately published at Sydney. Here we have a party of gold-seekers arriving at Bathurst, on their way to Ophir. In the background is seen the town of Bathurst, with the towers of the Protestant and Catholic churches; nearer, and crossing the bed of the Macquarie River, parties of gold-seekers may be seen with their dray-loads of tools and provisions, entering the town after their long and tedious journey across the mountain ranges.

The Second Illustration, also from one of Mr. Angas's Views, shows Fitzroy Bar, Ophir at the junction of the two creeks, with the process of washing for gold. This spot the diggers first commenced working. At the time this Sketch was taken, the entire "bar" was turned up, and the stones so heaped about as to resemble a warren on a large scale. On the left of the picture, across the Creek, is Meyer's store.

FITZROY BAR, OPHIR, AT THE JUNCTION OF THE TWO CREEKS.

BOMBARDMENT OF SALEE ON THE COAST OF MOROCCO, BY THE FRENCH.—(SEE NEXT PAGE.)



THE CROYDON WATER-WORKS.—THE RESERVOIR.—(SEE NEXT PAGE.)

THE FRENCH IN MOROCCO.—BOMBARDMENT OF SALEE.

THE upper Engraving upon the preceding page represents the recent operations of the French squadron on the coast of Morocco, by which the ports of Salee and Rabat have been bombarded and nearly destroyed. The French squadron, under the command of Rear-Admiral Dubourdieu, consisting of the line-of-battle ship *Henry IV.* (99 guns); *Caton* steam-frigate, 16 guns; *Sèbe* steam-frigate, 14 guns; and two 4-gun steam-sloops, made its appearance off Salee on the 26th ult. The Admiral immediately sent a despatch to the Governor of Rabat (which is a short distance from Salee), demanding the sum of 1800 dols. (about £360) as compensation for the plunder of a French merchant-vessel, which was wrecked there some time since; together with the amount of the expenses incurred in fitting out the ships for the purpose of requiring this satisfaction. He gave the Governor only two hours for the consideration of his demands, and threatened that, if not complied with in that space of time, he would bombard the place. To this communication the Governor replied that he could not take upon himself to come to a decision on such an important affair, but must forward the Admiral's despatch to his master, the Emperor Abderrahman, then at Fez, and wait for his commands, which there was no chance of receiving before the expiration of at least ten days, in consequence of the distance.

This answer not being deemed satisfactory by the Admiral, he gave orders to prepare for action, and, five hours after the sending of his communication, the tide being high, and consequently favourable, the vessels got under way, took up favourable positions, and commenced bombarding both Salee and Rabat at the same time, and continued for about eight hours to pour in such a storm of shot and shell that Salee is stated to be nearly razed to the ground, and Rabat has sustained considerable damage.

The Moors, in the meantime, did their best in returning the fire from the castle and fortress of Rabat, and also from some batteries at Salee, from which several pieces of heavy ordnance were brought to bear on the French fleet.

After the action the French fleet weighed anchor, ostensibly for Cadiz to refit. It is stated that seven men were killed by the fire of the Moors on board the *Henry IV.*, the Admiral's ship, and that many were wounded. The casualties on board the other vessels are not known. On shore the loss of life among the Moors and destruction of property were said to be very great.

OPENING OF THE CROYDON WATER-WORKS.

AN important application of the provisions of the Public Health Act has just been made, in supplying the town of Croydon with water, and improving its sewerage; the first practical operation of which was the occasion of a very interesting ceremony and meeting on Tuesday week, the 11th instant.

His Grace the Archbishop of Canterbury was present, attended by the vicar of Croydon; the Revs. George Coles, D. D. Stewart, T. Farrer, T. Cope, T. James, R. C. Fell; Edwin Chadwick, Esq., and Dr. Southwood Smith, of the General Board of Health; Sir Digby Neave, from the Epsom Board of Health; Cuthbert William Johnson, Esq., F.R.S., the chairman, and the other members of the Croydon Local Board of Health; and J. T. Way, Esq., the professor of chemistry and agricultural Society; numerous gentlemen and tradesmen of the neighbourhood, and a considerable number of ladies.

The works comprise an engine-house, reservoir, and apparatus for water supply, and the construction to a certain extent of the new sewers planned for the perfect removal of all sewage matters from the town district, according to the provisions of the Public Health Act.

On the Archbishop's entrance into the engine-house (which was filled with company) the chairman explained to his Grace the construction of the two Cornish engines (each of 24-horse power), combining the advantages of the high and the low pressure steam-engine, and found in the long experience of the Cornish miners to be by far the most economical steam-engine in pumping water to great heights. The steam is generated by a fire placed in the *centre* of the boiler (the water surrounding it), thereby "making use of the waste heat" of the boiler as in the ordinary mode. The chairman also explained that the engine then about to be set in motion lifts from the well into the reservoir on Park-hill about 40 gallons of water at every stroke of the piston, and that by the use of only 119 lbs. of coal it raised into the reservoir (140 feet above the well) about 50,000 gallons of water, a quantity sufficient for the daily supply (allowing an average of 20 gallons to each house) of 2000 cottages. Of the water in the well, the chairman added that it possessed less than 16 degrees of hardness, but that by merely boiling (as for the purposes of tea making, brewing, washing, &c.) it deposited a considerable portion of its salts of lime, and became of only *four* degrees of hardness—or, rather, *softness*, for 0° is the term to which the apparatus of the softness of water is rated. He added that the highly-ornamental engine-house and chimney, which cost the Brighton Railway Company about £3000, was purchased of them by the Croydon Board of Health for £200. The Archbishop, at the request of the chairman, then moved a steel bar, thus causing the engine to raise the first 40 gallons of water into the reservoir, thus, as it were, launching the new undertaking.

The Archbishop then resumed his carriage, and his Grace and the company adjourned to the residence of J. W. Flower, Esq., of Park hill, where the Archbishop alighted, and took his station on a few hundred yards, with the company assembled, and with some of the band of the Scots Fusiliers.

This reservoir is a vast tank of massive and cemented brickwork, about 50 feet high (exclusive of the dome, which is nearly 20 feet more), is circular, 75 feet in diameter, paved with stone, and lined with Portland cement, capable of containing 300,000 gallons of water, the whole surmounted by an artificial mound.

The Archbishop descended by a temporary staircase into this spacious cavern, preceded by the surveyor of the board, Mr. Thomas Cox. It had, of course, no water as yet in it, and was lighted by candles. The engine soon poured in a bright and sparkling stream of water.

The chairman of the board here explained to his Grace the advantages of the reservoirs thus placed. By being domed, and its dome copiously covered with earth to the depth of several feet, its water would be preserved in the same state as when it left the well; it would be secure from pollution, and possess a medium temperature; it would be cool in summer, and temperate throughout the coldest seasons; by being placed 148 feet above the Wandle, it would supply all the houses in Croydon on the constant-service principle, and thus convey it into their highest stories. The chairman then, on behalf of the Croydon Board of Health, and of the district, presented to the Archbishop, and his Grace, expressed their gratitude for many and important aids which his Grace had afforded the undertaking, and in particular by granting, amongst other things, the site of the reservoir on very favourable terms.

The Archbishop of Canterbury most impressively replied, that he had the greatest satisfaction in being present at the establishment of this spacious fountain for the town of Croydon, and of the other numerous fountains which, in time, for their object the supply of the means of bodily and domestic cleanliness to every house, not excepting the humblest cottage, in the town, and the removal by efficient sewers of every description of filth and decomposing refuse. His Grace concluded by saying, "So beautiful a creation is water when pure, that Holy Writ continually makes it an emblem even of the Holy Spirit. And the washing away of bodily impurity is continually made to typify the cleansing and purifying influence of the same Spirit on the heart and affections. Therefore pray, and I request you to join me, that it may please the Almighty that the outward purity which will be produced by these earthly waters may not only be an emblem, but, under God's blessing, an important aid for obtaining the inward and better purity of the heart, and that these waters may, therefore, be not only a temporal but a spiritual blessing to the inhabitants of Croydon."

The Archbishop then ascended the staircase, followed by the surveyor and the members of the local board; and the visitors gave three hearty cheers, making the arches ring anew.

The board and their friends, to the number of 50, dined in the evening at the Greyhound inn. The company were addressed by several gentlemen during the evening in proposing and replying to various toasts; but we have only space for the following extract from the chairman's acknowledgment of the toast of "The Croydon Local Board of Health," eloquently proposed by the Rev. J. G. Hodgson:

The chairman briefly gave a variety of statistical details of considerable interest, not only to his auditors, but the inhabitants of other towns as ill drained and badly supplied with water as Croydon had been hitherto. He stated that the spring from whence the town would be supplied was found to flow into the well at the rate of about 1000 gallons per minute—a supply more than treble the quantity consumed by the inhabitants, if every house in the town consumed 75 gallons per day. Of the necessary water rate, he stated that out of 2450 houses in the special district of Croydon, 1321 houses (or more than half) will be supplied at 1d. per week; 861 ditto at from 1½d. to 2½d. per week. Lastly, but 171 houses of 2463 to be supplied at a rate exceeding 2½d. per week, being on an average about one-fourth of the charge usually made by the metropolitan water companies. He next contrasted the expense of the sewerage works of Croydon with those of the London districts, and showed that whilst the annual rate levied there (had those been in London) would have been £3 0s. 4d., or 9½d. per week for each house, the rate for the works now in progress at Croydon would require an average rate for each house of 8s. 6d. per house, or not quite 1½d. per week; and, in conclusion, expressed the gratitude of the board for the constant support which it had received from the general board in London, from the labouring population of the district, from all the ladies of the town, and (with the exception of a few persons who had but slightly considered the subject) from all the inhabitants.

Our acknowledgments are due to Mr. W. Drummond, one of the Croydon Local Board of Health, for his obliging communication upon this inauguration. We should add, that Croydon has been the first of 130 towns that have petitioned to have the benefit of water in it on, and sewers constructed, and other sanitary measures applied, under the Public Health Act.

CALENDAR FOR THE WEEK.

SUNDAY, December 21.—4th Sunday in Advent. St. Thomas.
MONDAY, 22.—Sun rises 8h 6m.; sets 3h. 51m.
TUESDAY, 23.—Abdication of James II., 1688.
WEDNESDAY, 24.—Christmas eve.
THURSDAY, 25.—Christmas-day.
FRIDAY, 26.—St. Stephen.
SATURDAY, 27.—St. John.

TIMES OF HIGH WATER AT LONDON-BRIDGE, FOR THE WEEK ENDING DECEMBER 27, 1851.

Sunday		Monday		Tuesday		Wednesday		Thursday		Friday		Saturday

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—Under the Management of Mr. CHARLES KEAN.—MONDAY DEC. 22 will be presented Shakspeare's Play of the MERCHANT of VENICE, and the New and Original Comedy of TENTER ADVENTURES, or the Romance of Marriage, with the Farce of BETSY BAKER to conclude the last night (performing previous to the Christmas holidays). Friday Dec. 26 (Boxing-night), will be produced an entire NEW ENTERTAINMENT, entitled PANTOMIME AND HARLEQUIN BILLY TAYLOR; or the Flying Dutchman and the King Kentango Harlequin, Mr. Charles Fenwick; Columbine, Miss Rosina Wright; Pantaloon, Mr. Frank Sparks, Mr. Le Barr, and Columbine Miss Catalina Leclerq. Saturday, 27, the Comedy of Town and Country, and the new grand Pantomime.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. BATTY.—On MONDAY, Tuesday, and Wednesday, DECEMBER 22, 23, and 24, the usual entertainments will take place, and on FRIDAY, DEC. 26 (BOXING-NIGHT), will be produced an entire NEW ENTERTAINMENT, by Nelson Lee, Esq (founded on the ludicrous exploits of "Briggs," in "Punch"), entitled MR and MRS BRIGGS; or, Punch's Festival with Wit and Jollity. Mr W H Harvey, Harlequin; Mrs Harvey, Columbine; Pantaloon, Mr Beckmore; and Clown, by the renowned Mimic of the Age, Arthur Nelson, who will play a number of favourite Airs on the Rock Harmonicon—the most novel music of the present day. SCENES by the CIRCUS, as usual, by the most eminent Artists. Tickets may be had at the Box-office, from Eleven till Four daily.

MR. JOHN PARRY'S ENTERTAINMENT.—Mr. John Parry will give his NOVEL Vocal and Instrumental, at the HANOVER, KENNINGTON, on TUESDAY, DECEMBER 23, and every following Tuesday during the season, the final representation of it previous to the production of a new Entertainment now in preparation.

MR. GEORGE GENGE'S CONCERT and BALL will take place at the LONDON TAVERN, Bishopsgate-street, on TUESDAY EVENING, DECEMBER 30, 1851. The Committee will consist of Eight Gentlemen, to preside at the Concert at half-past Eleven.—Tickets, Five Shillings each, to be had of MR GENGE, Peckham-grove; and at the London Tavern.

SIGNOR F. RONCONI, Professor of Singing, begs to announce to the Nobility, Gentry, and his Pupils, that his ANNUAL SINGING CLASS will OPEN on the 5th of JANUARY, 1852. Classes will be held: for Ladies, in the afternoon of every Wednesday, from 3 to 5; and in the evening of every Wednesday, from 8 to 10; and for Ladies and Gentlemen together, in the evening of every Friday, from 8 to 10. All applications must be addressed to Signor F. Ronconi, at his residence, 19, Great Marlborough-street, Regent-street

LONDON THURSDAY CONCERTS, EXETER-HALL.—In consequence of the Christmas and New Year's Days falling on Thursdays, the SECOND CONCERT of the Series will take place on THURSDAY EVENING, JAN. 8, 1852, upon which occasion the most eminent vocalists who appear, sanctioned by the GRAND MADRIGAL CHOIR, which elicited such enthusiastic ap pause at the first Concert.—Admission, 1s, 2s, and 4s. Full particulars will be duly announc ed

LYRIC, MADRIGAL, and GLEE CLUB.—MONDAY, DEC. 22, 1851.—Conductor: MR. SHOUBRIDGE. Programme. Part I.—Quintet and Chorus—Now by Day's retiring lamp, Bishop; Glee—Say, mighty Love, and teach my Song, Stevens; Glee—Behold the Fire, fast flies the Night—Madrigal—Ah! what Fire; my Love, Bishop; Glee—Mark the merry Elves of Fairy Land, Dr Calicott; Solo and Chorus—Oh, gather each Flower (by desire), Bishop; Glee—By Celia's Arbour, Horsley; Trio—The Merry Gipsies, Welsh; Glee—Green Thorn of the Hill of Ghosts, Dr Calicott. Part II Madrigal—Come, let us all a Morning go (by desire), G W Martin; Glee—Hail, first ing Morn! Spofforth; Glee—With sighs, sweet Rose, Dr Calicott; Glee—Ye spotted snakes with double tongue, Stevens; Scales, with Solo and Chorus—Give me a Cup of the Grape's bright Dew, Bishop; Madrigal—Hail, Smiling Morn, Spofforth; Glee—Hail, Star of Eve, Wine that's brisk and fine, Bishop; Glee—In Summer's cool shade, Dr Arnold; Trio, Solo, and Chorus—Swiftly the Time bears on, Bishop.

MR J A Longhurst will preside at the Pianoforte. Tickets, 1s and 2s, at the Whittington, Clement's-inn, Strand; and of MR LAWRENCE, Hon. Sec.

ROBIN'S SOIREES PARISIENNES et FANTASTIQUES, No. 223, Piccadilly, opposite the Haymarket.—M and Mme Robin beg to inform the Nobility, Gentry, and Public in general, that they will have the honour of RE-OPENING their inimitable SOIREES PARISIENNES et FANTASTIQUES on Boxing-night, the 26th of December, with an entirely new style of entertainment.

ELECTRO-BIOLOGY.—Egyptian Hall, Piccadilly.—Rev. J. THROPP, M.A., Author of "Electro-Biology," and Mr. HENRY GALES have the honour and pleasure to announce that they will give a perfectly wakeful state as above on TUESDAY EVENING, DECEMBER 23, at 8 o'clock. Stalls, 3s; Reserved seats, 2s; Amphitheatre, 1s; Gallery, 6d. Doors open Until Commence.—Apply personally, or by letter, prepaid, 23, Brunswick-place, Charles-square, City-road

CHRISTMAS PARTIES.—PROFESSOR J. F. DERRY begs respectfully to announce that he has successfully prevailed upon him to be at liberty to attend Private Parties, with Natural Magic; likewise Experiments in systematic Electro-Chairvoyance, illustrated by Miss Rilei Pavilion, who will accompany him. Miss R T will, if required, sing to the pianoforte Comtoise.—Apply personally, or by letter, prepaid, 23, Brunswick-place, Charles-square, City-road

CALDWELL'S ASSEMBLY ROOMS, DEAN-STREET, SOHO, capable of accommodating 2000 persons.—Soirées Dansantes Every Night—Admission, 6d; per annum, £1 1s.—Mr CALDWELL begs to say that any Gentleman unacquainted with the routine of the Ball-room to enter with grace and freedom and take part in this fashionable amusement in six private lessons, for £1 1s. The Tavern Department is conducted on the Establishment principle.—Dean-street, Soho, and Crown Chalcot, 18, Adelaide-street, opposite Miss Kelly's Theatre.

The new HOLIDAY NIGHTS will take place on Boxing-day and New Year's-eve. Admission, 1s

GALLERY of ILLUSTRATION, 14, REGENT-STREET.—The Diorama of the Crystal Palace as a Winter Garden, the Overland Mail to India, and Taj Mahal will shortly be added to the Programme. The Indian Diorama is the last of his Grace the Duke of Wellington. Afternoons at 3. Evenings at 8 o'clock. Admission, 1s, 2s, 3s, 5s, and 8s. Doors open half-an-hour previous to representation.

CHRISTMAS HOLIDAYS.

ROYAL POLYTECHNIC INSTITUTION.—Lecture by Mr. George Barker, Esq., on the Skilful Music of England, every Evening except Saturday, at Eight o'clock. Lecture by J. H. Pepper, Esq., on Ward's New Reclaimed Lamp. Lecture by Dr. Bachhoffner, on the Philosophy of Scientific Recreation. Numerous Prize Models, Works of Art, &c., from the Great Exhibition. Dissecting Saws, Microscope, Chromatrope, Air Diver and Diving-bell, &c.—Admission, 1s; Schools and Children under ten years of age, Half-price.—Open daily from Eleven to Five, and every evening, except Saturday, from Seven till Half-past Ten

CHRISTMAS HOLIDAYS.—The GARDENS of the ZOOLOGICAL SOCIETY, in the REGENT'S PARK, will be OPEN to VISITORS, on payment of SIXPENCE each person, DAILY, except SUNDAY, from DECEMBER 22nd to JANUARY 3rd, inclusive. The HIPPOPOTAMUS and the URAN UTAN are exhibited from 11 till 4 o'clock The Collection includes many animals, having recently been increased by the addition of 60 species from the Collection at Knowsley

LONDON to DUBLIN, *via* HOLYHEAD, in 13½ Hours.—Three communications daily on week days, two on Sundays. Six passages by Mail, First Class, £3; Second £2. Return tickets (available for a fortnight): First class, £4 10s; Second, £3. Children under 12 years of age half-price. For full particulars of this unrivalled system between England and Ireland, see "Bradshaw's Guide," page 152; "Walsh's Irish Guide," page 90; and "Hogg's Railway Companion and Guide," page 8.

GREAT WESTERN RAILWAY.—On CHRISTMAS-DAY the SAME TRAINS WILL RUN as on SUNDAYS, with the addition of the Day Mail from Paddington, at 10.15, A.M., to Bristol; and from Bristol, at 8.35 A.M., to Paddington, calling at all the usual Stations.

Return Tickets will be available from Wednesday, the 24th, until the 29th instant, inclusive.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY

An Extraordinary General Meeting of the Members and the Assured of this Society will be held at the Office in Great Russell-street, on Thursday, the 1st day of January next, at Two o'Clock precisely, for the purpose of passing a Resolution for the Division of the Profits which have accrued from the general business of the Society during the five years ending June 30, 1851.

By order of the Board,
GEO. H. PINCKARD, Resident Secretary.

99, Great Russell-street, Bloomsbury, Dec., 1851.

ANCHOR ASSURANCE COMPANY, 67, Cheapside, London.—Life Assurances may be effected with this Office at the most moderate premiums, while the bonus additions to policies tend still further to lessen the cost of assurance.

Life Annuities are granted by the Company on terms exceedingly favourable to the assured. Prospectuses may be had on application.

T. BELL, Secretary and Actuary.

Chief Agencies—Bucks-place, Manchester; Exchange-buildings, Hull; Grey-street, Newcastle-on-Tyne; 5, Grafton-street, Plymouth; and 6, Herman-street, Southampton.

HANWELL COLLEGE and PREPARATORY SCHOOL, for the Examinations at Sandhurst, Woolwich, Addiscombe, and the Universities. Prospectuses of the full particulars may be had on application to the Rev D'E HEARN, Principal, at the College, or at the office of the United Service Gazette, 6, Wellington-street, Strand.

"After all said and done, there is really little virtue in a 'cram.' Persons who have sons or relatives intended for the army are pretty well aware for months, it may be years, beforehand what destiny is in store for their sons. Why not, then, commence the work of study? The young man in establishments where they may receive a thorough education in all the departments now declared necessary for the army or civil service, and where at the same time they may acquire a good moral training, an imitation into those lofty principles of conduct which alone can secure to the youth of England a future out of the common, and the esteem of his brethren and superiors. Such establishments exist, and are honourably fulfilled their self-declared duties."—United Service Gazette, Nov 29, 1851.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, CHARING-CROSS; for the Relief of the Poor afflicted with Diseases of the Eye.

Since the year 1817 to the last of January, 1851, 36,735 persons have availed themselves of the benefit of this charity, which was founded for the benefit indiscriminately of any applicant of recommendation. The Committee of Management make this most URGENT APPEAL to the charitable for pecuniary aid to assist them in supporting and extending these beneficial purposes for which this institution was founded. The Hospital is capable of receiving 50 inpatients, but only 20 can be admitted for want of means, although 1000 persons apply for relief annually. Subscriptions received by Messrs Coutts and Co, bankers, Strand; by Messrs Drummonds, Charing-cross; by Colonel Wood, the treasurer, Lectium; by the Secretary, or by the Housekeeper at the Hospital. The Committee most gratefully acknowledge the following donations:—

Bishop of Durham ..	.. £5 0 0	Benjamin Pycock, Esq	.. £10 0 0

A HOME for GOVERNESSES has been established at No. 16, HARPUR-STREET, RED-LION-SQUARE (with a Register open to Inspection of Families and Schools). Terms, for Board and Residence, 15s per week. Prospectuses of the Institution sent, on application to MRS HESSENHAUS, Lady Superintendent.

LONDON (WATFORD) SPRING WATER COMPANY, TO BE INCORPORATED BY ACT OF PARLIAMENT.
[Provisionally Registered under the Act 7 and 8 Victoria, cap 110.]
CAPITAL £250 000, IN 14 000 SHARES OF £20 000 EACH.

Of which £1 7s 6d will be payable on signing the Subscription Contract, and no further Call will be made until the Act has been so sized.

A large proportion of the Shares is reserved for Allotment to the Householders and Landed Proprietors of the District of the Metropolis and the Suburban Places intended to be supplied by the Company, and all Householders agreeing to take the Company's Water will have the preference on the allotment of Shares

No responsibility to the Shareholders beyond the amount of their Shares.

DIRECTORS

George Histon Rowell, Esq 19, Aldermanbury.
William F A Dalzell, Esq, 10, Eaton-place South.
Walpole Eyre, Esq, 29 Berners-square.
Henry Thomas Hope, Esq, M P., 116, Piccadilly, and Deepdene, Dorking, Surrey.
Maurice H Mahon Esq, 7, Alfred-place, Bedford-square.
James Fonsford, Esq, 34, Palace-gardens, Kensington.
Sir Robert Price, Bart, M.P., 31, Stratton-street, Piccadilly.
William R Robinson, Esq, Hill House, Watford, Herts, and 21, Austin-friars.
James Warren, Esq, Joulston Court House Hadleid, and 96, Houndsditch.

(Power to add to their number.)

Engineer—S C Homersham, Esq, 69, Buckingham-street, Adelphi.
Solicitors—Messrs Maltby and Hutchinson, 7, Bank-buildings, Lothbury.
Parliamentary Agents—Messrs. Law, Holmes, Antons, and Turnbull, 18, Finsbury-street, Finsbury-square.
Bankers—Sir Samuel Scott, Bart., and Co., 1, Cavendish-square.
Secretary (pro tem.)—Benjamin Rankin.
Temporary Offices—30, Moorgate-street, where, as also of the Bankers, Solicitors, and of Messrs Johnson, Longden, and Co., Stockbrokers, Tokenhouse-yard, prospectuses and forms of application for Shares may be obtained.

PROSPECTUS.

The object of this Company is to obtain from the chalk formation at Bushey Meadows, near Watford, a plentiful supply of pure water, agreeable and uniform in its temperature at all seasons, and to distribute this water soft, colourless, bright, and incapable of producing a fur on boilers, at a charge not higher than is now charged, even so high as the upper stories, to the houses in the western and north-western and most elevated district of the Metropolis, and in the various suburban places lying between that district and the source of supply, including, among others, Barnet, Bushey, Edgeware, Elstree, Bushey, Harrow, Hampstead, Harrow-on-the-Hill, Harrow Weald, Mendon, Kingsbury, Mill Hill, Pinner, Stanmore, Sudbury, Totteridge, Watford, Wembley, Whetstone, Winchmore Hill, and Winsden.

In the western and north-western district of the Metropolis a cheap supply of pure, soft spring water is a desideratum of very long standing, and one for the satisfactory solution of which, by the intervention of a cistern, fresh from the mains, upon the mere turning of a tap, will be a great boon for drinking and other domestic purposes, as well as for the finer manufacturing processes; since, with the exception of a few springs and wells, mostly of an unsatisfactory character, the inhabitants of this extensive district are dependent upon the artificially and unnaturally elevated supplies derived from the river Thames, objectionable as the water thus supplied is from its occasional disagreeable taste, from its hardness for use with soap in bathing and washing, from its depositing a fur on boiling, and from its being contaminated by the sewerage of the Metropolis and of populous upland towns, and by the surface drainage of manured and ploughed land. These contaminations, more especially in summer and autumn, render the Thames water unpleasant and unwholesome, and foster in it disgusting water-insects.

The further supply of water will cause the Metropolis (which has increased upwards of 5000 houses a year during ten years, according to the last census, and has actually doubled its population during the last twenty years) to enlarge rapidly in the direction of the high and the healthy grounds now forming its north-western boundary. The suburban places already named would also receive a plentiful supply of excellent water, 10,000 inhabitants, all of whom are dependent for water upon the troublesome and expensive supplies obtained by means of deep wells, rain butts, or water carts, and whose property is consequently without adequate protection in case of fire. When pure and soft water of a plentiful supply is generally furnished to these places, there can be no doubt that numerous new dwelling-houses will be soon built over their many eligible building grounds, for at present the want of such a supply that prevents the erection of them. The necessity for the supply felt by the inhabitants of the Metropolis, and of the other places included in the provisions of the Act of 1850 by petitions to Parliament, signed by 20,000 of their number, in favour of the incorporation of the Company.

With respect to quantity, it is intended to obtain a daily supply of eight million of gallons daily from shafts of wells sunk in the chalk formation at Bushey Meadows, near Watford. These shafts will intersect fissures strongly charged with spring water fed by the rain which percolates to a great depth through a vast area of adjoining chalk-hills rising at places to an altitude of 900 feet. Under these hills there are impervious strata inclining towards Watford, which cause the water to rise to the surface, and to flow naturally in full as great a supply as that at present done, by subterraneous drainage to the sea. In 1849, Mr Robert Stephenson, the eminent engineer, after having made a number of experiments and observations at such a shaft and borings that had been sunk in the chalk in this locality by Mr Robert Fetzen, by order of a Committee of the House of Commons, for the purpose of ascertaining how copiously spring water can be there obtained for the supply of the Metropolis, reported, as his conclusion, "I am perfectly convinced of the feasibility of the proposed plan as far as regards quantity;" a conclusion that all subsequent experience and investigation has confirmed. The water, which can be abundantly obtained at a natural elevation of more than 120 feet above Trinity high-water mark, will be raised, subject to economy, by steam power, into reservoirs, at a sufficient elevation to rise by gravity to all the highest grounds and buildings, and will be conducted into London through capacious pipes along the Edgeware-road.

With respect, again, to quality, the promoters, while regretting the obstructions that this and other metropolitan projects for the supply of water to the inhabitants have been subjected to during the last two Sessions of Parliament, have the satisfaction of finding that the objections urged by the opponents appear to be entirely set at nought, and have ended in the decided and the unequivocal confirmation of their former statements by a tribunal at once perfectly competent and impartial. Professors Graham, Miller, and Hofmann, the eminent chemists appointed by Government as a Commission to examine into the quality and wholesome supply of water to the metropolis, when alluding to water from the chalk intended to be supplied from Bushey Meadows, thus expressed themselves in a report addressed to the Secretary of State, on the 17th June last:—"The inhabitants of London appear to have within their reach, in these chalk strata, a supply of water, which, if obtained in sufficient quantity, would be unobjectionable, and which may be considered as everywhere of an uniform composition and quality. * * * * * * * It contains no trace of any deleterious metallic impregnation, and is certainly pure water. * * * * * * *

NEXT WEEK WILL BE PUBLISHED,
THE ILLUSTRATED LONDON NEWS,
PRICE SIXPENCE;
WITH A SUPPLEMENT, GRATIS.

With each DOUBLE NUMBER (price One Shilling) of this week's ILLUSTRATED LONDON NEWS is presented (GRATIS) a HALF-SHEET SUPPLEMENT and a MUSICAL SUPPLEMENT.

*** The new Mail Steam-packet *Arragon* is engraved, and will appear in a week or two.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 20, 1851.

THE Chancellor of the Exchequer has discovered a great fact. At the annual *soirée* of the Halifax Mechanics' Institute, at which the right honourable gentleman was present, he favoured the company with his opinion upon the advantages of study, and made upon the whole a more cordial speech in support of literature, and its claims to the gratitude of the country, than we were prepared to expect at his hands. The theory of the right honourable gentleman is excellent; and, in drawing the attention of our readers to the subject, it is with the hope that we may to the extent of our means be instrumental in inducing a public officer in so high and responsible a position as he holds to accommodate his practice to his opinions. "It was," said he, with much justice and force—

"A great advantage in the present day, that the means of reading were placed so largely within the reach of persons not of great pecuniary resources. Why, only that very day, in coming down by the train, he was amusing himself by looking at the books offered for sale at one of the railway stations. There he found a work as trigonometry by the side of Sir Walter Scott's novels; a work by Thucydides and the 'Parlour Library;' a treatise on well-sinking, and the last novel of the day—all sold at prices accessible even to labourers, and those earning moderate wages. Now, the more these books were read, the more widely would be the benefit produced."

The Chancellor of the Exchequer was to some extent wrong in asserting that books had been made cheap enough to be placed within the reach of labourers and men earning moderate wages, but quite right in the expression of his belief that it was of great advantage to society that good books should be cheap, and that they should be extensively read. But there was a Mentor present to point out to him how, if he so earnestly desired the education of the adult race of working Englishmen, he might carry out his object. Mr. Cobden, who was also among the number of the invited guests upon the occasion, could not, as a matter of conscience, allow so favourable an opportunity to pass unheeded. He rose immediately after the right hon. gentleman, and put the whole case in a very clear and striking light. He showed the impediments to the diffusion of knowledge caused by the Chancellor of the Exchequer himself, or by the fiscal system which he superintends, and is responsible for:—

"He was not," he said, "going to take any undue advantage of the presence of the Chancellor of the Exchequer, and say what taxes he should take off; but the Chancellor did, as they all knew, once a year set the horoscope of their financial fate, and in felt it was important to have the privilege of speaking in the hearing of a Chancellor of the Exchequer, for if they could persuade him that there existed great impediments to knowledge, which he might remove, who knew but that he might remove them and afford them relief? Now, when they went into a cotton-mill, and looked at rubbish called cotton waste, they would say it was a strange idea for any Chancellor of the Exchequer to think of putting a tax on that. And if they were to see the great waggon full of rags going through the town, they would say that it was a queer sort of commodity for a Chancellor to put a tax upon. And true enough he never did think of taxing this waste and these rags. These were somehow converted into a sort of wadding, and used for firing off fowling-pieces—wadding for a gun. Still the Chancellor did not think that was a proper thing to tax. *But these things were sometimes converted into reams of paper, which were used to print pamphlets and newspapers; and then, although the Chancellor did not tax the article with which parties might shoot a partridge or a snipe, yet, when it was converted into an article to teach the young idea how to shoot, for which the excellent Friend, their representative, placed an excorman on the paper, and before it could be used in their school-rooms and libraries he put a tax upon it.*"

This was excellently said—in the right place and at the right time—and it cannot but have produced an effect in the quarter where it was intended to be useful. The excise duty upon paper, as we have frequently had occasion to show, and as we expect we shall again and again have to reiterate, is one of the most stupid and mischievous taxes which it is possible for any Government to levy. It is not simply a direct impediment to the education and to the moral and social elevation of the people; but it is an interference with trade, which tends in the most obvious manner to diminish the national wealth, and to place the manufacturing classes—employers as well as labourers—at a disadvantage compared with the other manufacturers and labourers of the world. The tax has not a leg to stand upon—not the shadow of an argument by which its maintenance can be justified. It has not even the plea of necessity; for no necessity to the extent of the comparatively small sum which it produces to the revenue can justify the State in perpetuating the evils which it causes. What the revenue gains by it with one hand, it pays out with the other; for ignorance is a costly commodity to a state, and produces ugly progeny—those twin brothers, pauperism and crime. Even the drain upon us by the Kaffir war is no justification for allowing such an impost to remain—an impost which is as foolish in itself as it is prejudicial to the great interests of commerce, and to those still greater interests of morality and religion which are involved in its continuance. Sir Charles Wood has not proved himself a particularly brilliant or useful Chancellor of the Exchequer; but if he would abolish the excise duty upon paper, he would establish for himself a throne in the Temple of Fame which greater men might well envy him. Perhaps, however, he meditates a surprise for us in his next Budget? Such a boon as this would cause all his past shortcomings to be forgiven and forgotten. To have untaxed the people's food was a great achievement. To untax their knowledge by untaxing the sole material by which knowledge can be conveyed to them, will rank only second to that achievement in the great page of impartial history.

THE ENGLISH PRESS AND THE FRENCH POST-OFFICE.—The great number of English families resident in France, and the vast sums of money put into circulation by them in various departments of French territory, forbid the supposition that the French authorities can imagine they have any interest to serve in driving English visitors from France, or in rendering that country a less agreeable place of residence than it has heretofore been. If the exclusion of certain English newspapers could be shown to be necessary for the preservation of public tranquillity, allowance might be made for such an interference with the rights of Englishmen at home and abroad. But the fact is, that a vast majority of the subscribers to the English papers in France are Englishmen, who, from the British Ambassador downwards, have maintained throughout the late unhappy events the most religious neutrality, and whose exemplary abstinence from any participation in the internal affairs of France has deserved a more generous acknowledgment from the authorities of that country. With regard to the small proportion of English newspapers which find their way into French families, we thought it was universally conceded that the class of persons whose tastes and whose leisure lead them to cultivate a knowledge of the politics and literature of a foreign country are not those who make barricades and descend with their muskets into the streets. The matter becomes worse when we remember how heartily Louis Napoleon admired in his better days the wholesome, manly, and practical tendencies of the English press, and its unswerving support of law and order at home. The latest instance of an English newspaper stopped in the French Post-office is that of our excellent contemporary the ILLUSTRATED LONDON NEWS, whose spirited pencil sketches can hardly have given umbrage to the President, but whose views of the breach of the 68th article of the Constitution possibly approximate much more nearly to those of the High Court of Justice than to the fash-onable belief at the Elysée. Our contemporary will, no doubt, feel complimented by the exclusion; but his English readers in France will have some cause to complain of this latest piece of interference on the part of the French officials with the liberty of the press.—*From the Times.*

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The past week has brought nothing to disturb the quiet routine of domestic privacy prevailing at Court since the demise of her Majesty's uncle, the late King of Hanover.

On Sunday last the Queen and the Prince, with the Prince of Wales and the Princess Royal, attended by the ladies and gentleman of the household, attended divine service at Whippenham Church, where the Rev. T. Prothsroe officated.

Her Majesty and the Prince Consort, with the Royal family, have taken daily walking and riding exercise in the vicinity of Osborne.

Her Majesty and the Prince Consort will leave Osborne this day (Saturday) for Windsor Castle, where, according to present arrangements, the Court will sojourn until the middle of February next

The Archdeacon of Ely has succeeded the Marchioness of Doure as Lady in Waiting on her Majesty. The Hon. Eleanor Stanley has succeeded the Hon. Beatrice Byng as Maid of Honour in Waiting.

THE CABINET.—Lord John Russell has gone to Woburn Abbey, and will remain there till after the Christmas holidays. Lord Lansdowne has gone on a visit to Lord Fortescue, at his seat in Devonshire. Mr. Labouchere has departed for Stoke Park. Sir George Grey has returned to London from his visit of inspection to Dartmoor Prison. Lord Granville has gone into Shropshire. No further meetings of the Cabinet are expected for some time; but very soon after Christmas all the Ministers are expected to reassemble in London, and some Cabinet Councils will be held previous to the Privy Council, at which time the day for the meeting of Parliament for business will be fixed on. The Chancellor of the Exchequer left town on Tuesday for Halifax. The Right Hon. Henry Labouchere left town on Tuesday, on a visit to the Earl of Carlisle, at Castle Howard, Yorkshire. The Earl of Carlisle has left Grosvenor-place for Castle Howard, where a numerous family circle will assemble next week for the holidays. Sir George Grey left town on Wednesday for Osborne, Isle of Wight, on a visit to her Majesty. The Marquis of Lansdowne left the seat of Earl Fortescue, in Devonshire, on Wednesday, for The Grange, Alresford, Hants, on a visit to Lord Ashburton.

The Duke of Devonshire will leave Lismore Castle, his Grace's princely seat in Ireland, early in the ensuing week for London, *en route* to Brighton, where the noble Duke intends to reside several weeks.

His Excellency Baron Brunnow has returned to town from visiting the Duke and Duchess of Bedford at Woburn Abbey. The Baroness Brunnow has been suffering from severe indisposition.

His Excellency the Austrian Minister has just returned to Chandos House, from Paris.

It is understood that, on account of the death of Lord Brooke's mother, the Countess of Warwick, the nuptials of the noble Lord with the Hon. Miss Charteris will not take place until the month of February next.

Sir George Wombwell has, during the past week, been entertaining a distinguished party at Newborough Park, including H.R.H. the Duke of Cambridge, the Earl of Chesterfield, Lord Adolphus Fitzclarence, Viscount Canterbury, the Hon. James Macdonald, Captain Fremantle, R.N., Lieut.-Colonel Blair (of the Scots Fusilier Guards), &c.

The Duke de Guiche has been appointed Minister Plenipotentiary from the French Republic to the Court of Hesse Cassel. His Excellency and the Baroness are about to proceed to Germany to fulfil his mission.

His Excellency the American Minister, Mrs. Lawrence, and Miss Lawrence, are gone from Paulton's to visit Mr. and Lady Elizabeth Drummond, at Cadland, near Southampton, where a large party has assembled for the Christmas holidays.

The marriage of G. H. Vansittart, Esq., of Bisham Abbey, Berks, and Miss Catherine Stuart Menzies, of Culdares, was celebrated in St. Paul's Episcopal Church, Edinburgh, on the 11th inst. Bishop Terrot officiated. Amongst those present were his Grace the Duke of Athol, the Earl of Mansfield, Lord Saltoun, the Hon. Lady Menzies, Sir Robert and Lady Menzies (of Castle Menzies), Mr. Johnstone (of Alva), M.P., and the Misses Johnstone, the Hon. Ellen Norton, Captain Vansittart, A. Vansittart, Esq., Mr. and Mrs. Stuart Menzies (of Culdares), &c. The bridal party partook of an elegant *déjeûner* in Barry's, after which the married pair drove off *en route* for Bisham Abbey.

Mrs. Fletcher Norton gave a grand ball and supper at her splendid seat, Elton Manor, on Tuesday last, when about 250 of the leading nobility and gentry of the county of Nottingham assembled to participate in the festivities.

CHURCH, UNIVERSITIES, &c.

OXFORD.

The Union Society, so well known to members of the University, having had some dispute with the landlord of their present premises in the Highstreet, have just concluded the purchase of a very eligible freehold property lying at the back of the Corn Market, and running up to New Inn-lane, on the north, which formed the residence of the late Dr. Bourne. The purchase-money is said to have been about £3000; and the society contemplate making the house, so as to have their debating-room and their library on the same site.

THE UNIVERSITY COMMISSION.—The Oxford University Commission had a meeting on Wednesday at the official residence of the First Lord of the Treasury, in Downing-street. Present—the Bishop of Norwich, the Dean of Carlisle, the Master of Pembroke, the Rev. H. G. Riddell, J. L. Dampier, Esq., the Rev. Professor Powell, the Rev. G. H. S. Johnson, and the Rev. F. Stanley (Secretary). On the same day the Cambridge University Commission had a meeting at the same place. Present—the Bishop of Chester, the Dean of Ely, Sir John Herschel, the Rev. Professor Sedgwick, and the Rev. W. H. Mills (Secretary).

THE NEW COLONIAL BISHOPRIC.—It is generally stated that the Rev. Mr. M'Dougall, the senior missionary at Sarawak, will be appointed Bishop of the proposed new diocese of Borneo, Sir James Brooke being strongly in favour of the appointment.

The office of Provost of Trinity College, Dublin, is vacated by the death of the Rev. F. Sadleir, D.D., which took place very suddenly on Sunday night.

UNIVERSITY TESTS.—The *Edinburgh Witness* states that the Lord Advocate has promised to bring in a bill on the subject of the university tests, similar to that introduced by his predecessor, Lord Rutherfurd.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place:—The Most Rev. and Right Hon. Lord George Beresford, D.D., Archbishop of Armagh, to be Chancellor of the University of Dublin; the Rev. J. T. Pine Coffin to a prebendal stall in Exeter Cathedral. *Rectories:* The Rev. William Jenkins to Michaelstone-le-Vedw, Gamorganshire and Monmouthshire; the Rev. Hugh Jones to Llangelynin, Carnarvonshire; the Rev. W. Bernard Lauder to Mogadon, Decesle Tyrconn. *Vicarages:* The Rev. William V. Yarworth, Oxford, to the temporary charge of Llangstock-Vibon-Avel, Monmouthshire; the Rev. Eccles Carter to Kingston, Taunton, Somerset; the Rev. J. Greaves to Great Hinsedon, Herts; the Rev. H. Lloyd Oswell to Leighton, Salop; the Rev. R. F. Whistler to Bishop's Norton, with Attarby, Lincolnshire; the Rev. J. N. White to Rushall, Norfolk; the Rev. H. T. Hill to Feniton, Hereford-bure.

TESTIMONIALS.—The following clergymen have just received testimonials of esteem and regard:—The Rev. Alexander Braddell, late of Felixstow Suffolk; the Rev. John Martyn Collins, late of St. John and St. George, Exeter, from his parishioners; the Rev. Edward Augustus Cobbold, late assistant-curate of St. Nicholas, Great Yarmouth, from the poor of that parish; the Rev. Thomas Dixon, vicar of Tibenham, Norfolk, from his parishioners (amongst the subscribers 138 were of the poor and labouring class, and every poor family contributed in her mite); the Rev. George Eastman, Curate of St. Philip's, Sheffield, from the congregation; the Rev. Thomas Glascott, 33 years Rector of Rodbourne, near Stroud, from his parishioners; the Rev. Thomas Graham, late of St. James's, Toxteth-park, Liverpool, from the congregation; the Rev. John W. Grier, of Ambleside, Worcestershire, from members of the congregation; the Rev. T. Humphrey, from the congregation of St. Mary Chapel, Hemingham, near Whitehaven; the Rev. Joshua Laycock, late of Moreton and East Stockwith, Lincolnshire, from the inhabitants; the Rev. G. Mansfield, late of Holy Trinity, Trowbridge, Wilts; the Rev. Henry John Marlton, late of Whalley, Lancashire, from the parishioners; the Rev. F. H. W. Schmitz, formerly Missionary in Southern India, and late officiating minister of Hounslow, Middlesex; the Rev. Richard Surtees, late of Spennithorne, Yorkshire; the Rev. J. Judge, late of Liscard and New Brighton, near Liverpool, from the inhabitants; the Rev. Hugh Weightman, late of St. George the Martyr and St. Mary Magdalen, Canterbury. To the Rev. Samuel Webb Lloyd, by the inhabitants of the parish of Barfreystone, near Dover, on his vacating the curacy of the parish.

ACTS OF PARLIAMENT.—On Monday was printed a return, obtained by Mr. Brotherton, M.P., of the number of acts of Parliament passed in the late fifty years. The largest number was in 1845, when 562 acts were passed, of which 402 were local and personal, arising from the railway mania. The smallest number was in 1841, when only 13 were passed. In 1847, 447 acts were passed; in 1848, 318; in 1849, 243; in 1850, 261; and in the last session, 278, of which last number 105 were public, 146 local, and 27 private.

REMARKABLE PROPHECY.—The following prediction of St. Cæsario, Bishop of Arles, in the year 542, may not be considered void of interest at the present moment. It is taken from a book entitled "Liber Arbaithus," printed in Gothic characters, and deposited in the Royal Library, Paris:—"The administration of the kingdom, France, will be so blinded that they shall leave it without defenders. The hand of God shall extend itself over them, and over all rich; all the nobles shall be deprived of their estates by digging; the division shall spring up in the church of God, and there shall be two husbands, the one true, and the other adulterous. The legitimate husband shall be put to flight; there shall be great carnage, and as great a profusion of blood as in the day of the Gentiles. The universal church and the whole world shall deplore the ruin and destruction of a most celebrated city, the capital and mistress of France. The altars of the temple shall be destroyed, the holy virgins outraged shall fly from their seats, and the whole church shall be stripped of her temporal gods; but at length the black eagle and the lion shall appear hovering from far countries. Misery to thee, O city of plutocophy! thou shalt be subjected! a captive humbled even to confusion shall at last receive his crown, and destroy the children of Brutus."—From *Notes and Queries.*

COUNTRY NEWS.

REPRESENTATION OF NORTH DURHAM.—Mr. R. D. Shafto, one of the members for the northern division of the county of Durham, having intimated his intention to retire from Parliament whenever a dissolution takes place, a requisition has been presented to G. H. Russell, Esq., that he will allow himself to be put in nomination. Mr. Russell is son of the Hon. Hamilton Russell, Brancepeth, near Durham, and is a Liberal in politics.

REPRESENTATION OF GREENWICH.—Mr. Montagu Chambers addressed the electors of Greenwich on Monday night as a candidate for the representation of the borough. The honourable and learned gentleman, in a long speech, said he was favourable to the abolition of the property qualification for members, to a revision of the existing electoral districts, and an extension of the franchise to all householders. He also advocated the ballot and triennial parliaments. At the close of his address, Dr. Halahan asked the learned gentleman whether, if returned to Parliament, he would oppose the grant to Maynooth?—Mr. Chambers: Yes. (Loud cheers.) The object of the grant was very different from that to which it was now applied. It arose in a desire to educate the Roman Catholic priesthood at a time when they had no means of getting education elsewhere, except a very dangerous education. As the cause for the grant was gone, he should oppose its renewal. (Loud cheers.) A resolution affirming that Mr. Chambers was a fit and proper person to represent the borough of Greenwich in Parliament was unanimously agreed to. The learned gentleman returned thanks.

ROYAL COMMISSION TO PAINT A VIEW OF MANCHESTER.—It is understood that her Majesty the Queen has been graciously pleased to command Mr. William Wyld, of London and Paris, whose picture of Venice (No. 199) and others are in the present exhibition of modern paintings in the Royal Manchester Institution, to paint a view of the town of Manchester. Mr. Wyld is now at Manchester for that purpose. Mr. Wyld has also received a commission from her Majesty to paint a view of St. George's-hall, Liverpool, on which he will commence when he has completed the view of Manchester.

The Earl of Fife has presented the St. Andrew's Lodge of Freemasons in Dublin with the handsome sum of 60 guineas, to aid in the completion of their new lodge.

COUNTY FINANCIAL BOARDS.—Lord John Russell has declined, on the part of the Government, after consulting Sir George Grey, to undertake the introduction this year of the County Boards Bill in the ensuing session. The measure will, therefore, probably be again under the care of Mr. Milner Gibson, M.P.

LECTURE BY VISCOUNT LEWISHAM, M.P.—On Tuesday evening Viscount Lewisham, M.P., delivered an interesting and instructive lecture at St. Mary's School-room, Bilston, to the members and friends of a mutual improvement society in connexion with St. Mary's Church; the subject selected by his Lordship being, "Civility Considered as Benevolence in Trifles."—*Wolverhampton Chronicle.*

On Tuesday night Dr. Cumming addressed a very crowded meeting in Birmingham, on the subject being the validity of the miracles of the Roman Catholic Church, and the doctrines in general of the Church of Rome. Dr. Newman was invited, but neither the reverend superior nor any of the fathers of the Oratory were present. Lord Calthorpe presided.

The annual *soirée* of the Stockport Reform Association was held at the County Court Hall on Tuesday evening, and drew together an exceedingly large and respectable attendance of the electors and other inhabitants. Mr. Hampson, president of the association, took the chair; and the company included Messrs Kershaw, Esq., M.P. for the borough; John Bright, Esq., M.P.; Mr. Councillor Eskrigge; Alderman Rylands, of Warrington; Edwin Oldham, Esq., Rev. M. de Valmont, Rev. John Thornton, and Mr. E. Coppock. The principal speech of the evening was delivered by Mr. Bright, M.P., who entered largely into the various questions of Reform which are at present agitated.

NORTHAMPTON MECHANICS' INSTITUTE.—A grand *soirée* was held in the Corn Exchange, Northampton, on Tuesday evening, to commemorate the opening of a new suite of buildings, destined for the occupation of the Northampton and Northamptonshire Mechanics' Institute. The company numbered about 800, and included the principal nobility and gentry resident in the neighbourhood, the families of the higher and middle classes, and those of a great number of the operatives in the town. The splendid hall which was the scene of the proceedings was tastefully decorated with evergreens and a profusion of beautiful banners, bearing appropriate devices. Earl Fitzwilliam, K.G., presided; and among the noblemen and gentlemen who surrounded him on the platform were Lord Althorp, Lord Hartley, Lord Wodehouse, the Rev. Lord Aweyne Compton, the Earl of Aboyne, the Hon. G. Fitzwilliam, Mr. Vernon Smith, M.P., Mr. Layard, the distinguished antiquary and traveller; the Mayor of Northampton, Mr. Charles Knight, Mr. George Cruikshank, Dr. Conolly, the Hon. R. Watson; the Revs. T. W. Barlow, C. H. Hartshorne, E. T. Frost, G. Nicholson, T. James, and many others. The meeting was addressed by the noble chairman, Mr. Charles Knight, Mr. V. Smith, M.P., Mr. George Cruikshank, Dr. Conolly, Lord Hartley, the Hon. G. Fitzwilliam, Lord Wodehouse, the Earl of Aboyne, the Rev. Lord Aiwyne Compton, the Mayor of Northampton, and several of the local clergy.

HALIFAX MECHANICS' INSTITUTE.—On Tuesday evening the annual *soirée* of the Halifax Mechanics' Institute was held in the Odd Fellows' Hall. It was attended by more than 1200 persons, including the *élite* of the district. The Right Hon. Chancellor of the Exchequer, and sons of the members of the borough; Mr. Cobden, M.P.; Colonel Pollard, Mr. James Stansfield (judge of the county court, and president of the institution), Mr. William Fairbairn (of Manchester), and Mr. John Crossley (late mayor), and Mr. John Wardsuse (the present mayor), and others, occupied the platform, the Mayor filling the chair as president. Several letters of apology were read from gentlemen unavoidably absent. One was from Mr. Edwards, M.P., in which he intimated his intention to subscribe £100 towards the erection of a new hall for the purposes of the institution. The Chancellor of the Exchequer also made a similar intimation. From the report read it appeared that the institution has 401 members and 227 subscribers, and is in a very prosperous state. Speeches were delivered by the Mayor (as chairman), by Mr. John Crossley (who moved the adoption of the report), by the Chancellor of the Exchequer, and Mr. Cobden, M.P.

ST. MARY'S HOME FOR PENITENTS, WYTHAGE.—The chaplain has drawn up an account proposing to obtain about three acres of land, to build a house capable of containing about 30 penitents and six sisters, with a chapel; the cost to be about £5000. An appeal is made for aid to the members of the Church of England. St. Mary's Home was opened on the 2d of July, 1849, to accommodate three sisters and six penitents. The Bishop of Oxford undertook the office of visitor, and the home was enlarged, but applicants were refused for want of room, and hence the present appeal for assistance to erect a new edifice.

The local scheme of education for the boroughs of Manchester and Salford is undergoing an investigation by the members of the Society of Friends in the former town and neighbourhood; and they have in preparation a protest for publication, to contain the grounds of their dissent from a plan which they regard as inimical to civil and religious liberty.

THE SOUTH YORKSHIRE COAL-OWNERS AND THE GREAT NORTHERN RAILWAY.—The great demand for South Yorkshire coal, consequent upon the opening of the Great Northern Railway, has led to a material advance in the price of that article. It seems, however, that coal-owners, not content with this state of things, are endeavouring to extort higher rates by restricting the supply of coal to the railway company. The consequence is, that the latter are driven to other sources to meet the demands pressing upon them from all parts of the kingdom; and last week two trains of coal, consisting of fifty trucks each, were procured from the Durham coal-fields, and forwarded on the Great Northern to the metropolis. We believe that arrangements will be made for procuring a constant supply of coal from the North, the superior quality of the article more than compensating for the additional expense of carriage.

On Sunday morning banns of marriage were published for forty-eight couples at the parish church, Preston, being a larger number than ever "there's asked" on any occasion. On Tuesday last, at the house of Hardman, there was a similar "press of business," not less than sixty notices of marriage being read by the clerk.

The *Exeter Gazette* states, that, in anticipation of a rise in the price of corn, the bakers of Exmouth have raised the price of bread a halfpenny the 4-lb. loaf.

SANITARY.—The *Glasgow Constitutional* says:—"A large proportion even of the newly-constructed houses in Glasgow are very unfit for human residence, and are a direct cause of the diseases which are constantly sweeping families to the grave. It is melancholy to think that, with the enormous nuisance of Wynds existing in our eyes, we should be erecting similar centres of disease and filth even in the most modern and fashionable part of the city."

DESPERATE AFFRAY WITH POACHERS.—An encounter took place on Monday morning, about one o'clock, between the gamekeepers of Major-General Sir Thomas Cullum, of Barton Lodge, six miles from Nottingham, and a large party of poachers (numbering at least forty). The keepers were completely overpowered, the poachers leaving them in a dreadfully mutilated state. The poachers had a hasty retreat, no doubt thinking that the noise of the affray might alarm the villagers. Several of them were, however, so disabled that they were obliged to be carried out of the field. None of the poachers have yet been captured.

Some serious affrays with poachers took place in the course of last week in the neighbourhood of Letton and the adjoining parishes, Norfolk, in which two police-officers and gamekeepers were fired at by shot. Several of the poachers have been committed to Norwich Castle for trial.

The herring fishery at Yarmouth has hitherto proved successful. The catch of some of the boats reached fifty and sixty lasts each, few being less than twenty lasts, and the average catch being about thirty lasts per boat.

FATAL BOILER EXPLOSION NEAR BRISTOL.—On Friday afternoon (last week) a boiler explosion occurred at the Soundwell Coalworks, near Kingswood, Gloucestershire, by which a "banksman," named Thomas Waller, was killed, and three other persons severely injured. The bunding occupied by the engine to which the boiler was attached was shattered to pieces.

ROBBING A RAILWAY TRAIN.—A money parcel value between £50 and £60 was adroitly stolen, on Wednesday week, from a train on the Manchester, Sheffield, and Lincolnshire Railway.

The Durham papers congratulate their readers on the dispersion of a band of housebreakers, known as "Allen's gang," who have for some months past infested the neighbourhood of Trimdon Grange and South Wingate, in that county. The gang has been broken up by the police, and several of its members brought to prison.

THE REVOLUTION IN FRANCE.

VIEW OF AUXERRE.

In our Journal of last week we mentioned several districts of France as having suffered from the excesses and ravages of the Socialists. To these may be added the district comprised between Clamecy, department of the Nièvre, and Coulanges-sur-Yonne, which has been the scene of grave disturbances. "In every commune, bands attempted to possess themselves of the mairies, in order to seize the arms of the National Guard. In resisting one of these bands, a gentleman named Posseaux was killed. One portion of these insurgents proceeded to Clamecy, where they committed excesses which have been already described; another marched on Coulanges-sur-Yonne, but the inhabitants resisted, and for three days prevented the insurgents from forcing their way into the town. A great number of smaller communes were, however, disarmed and sacked. The tocsin was sounded. At last expresses succeeded in reaching Auxerre, and vigorous measures were immediately taken. Some engagements subsequently took place between the 'brigands' and the military, and the former were everywhere defeated. On both sides there were killed and wounded. The accounts from Auxerre represent that the rioters were everywhere routed, except at La Puisaye, but that military forces were being sent against them there."

AUXERRE,

of which we have engraved a view, is the capital of the department of Yonne, situated on the left or west bank of the river which gives name to the department: it is 102 miles south-east of Paris, by the road through Melun. The city stands on the slope of a hill, whence it is seen to great advantage. The massive Cathedral and two or three other large churches, and a ruined spire, all rise finely above the houses, reminding one of cities in the background of pictures by old German masters. It is a fine old place, with many well-built houses, but with dirty and narrow streets. The cathedral, dedicated to St. Stephen, is accounted one of the finest in France; it escaped with little damage the violence of the Revolution: the prevailing style is flamboyant Gothic, except in the choir, which is early Gothic, of the twelfth century; the portal is magnificent, and there are some beautiful painted windows. The Boulevards, in the place of the ancient walls, which surround the town on three sides, present a charming variety of prospects; the moats are filled with plantations of acacia, gardens, and vines; and the ancient towers are picturesquely festooned with ivy. The chief trade of the town is in wine, of which it is a considerable mart.

DISSOLUTION OF THE HIGH COURT OF JUSTICE.

One of the earliest acts of Louis Napoleon on the morning of Wednesday, the 3d inst., was the dissolution of the High Court of Justice, convoked

THE LAST SITTING OF THE HIGH COURT OF JUSTICE.

THE REVOLUTION IN FRANCE.

CARRYING THE WOUNDED TO THE HOSPITAL OF ST. LOUIS.

in the terms of the Constitution, by the residuary members of the Legislative Assembly The special object of the meeting of the Court was to adopt a resolution relative to the President of the Republic, when a summons to separate was communicated to the members from the Government in the form pictured in the Illustration, and the attorney was instructed to consider any decree it might issue as null. It was further expected that a decree would appear in the *Moniteur* of the next day, dissolving the Court. Thus was nullified the Supreme Court of Appeal from all the tribunals of France, which held its sittings in the Palais de Justice.

THE WOUNDED IN THE HOSPITAL OF ST. LOUIS.

One of the most touching episodes amidst the carnage which raged in the streets of Paris was the conveyance of the wounded to the various hospitals. Our Artist has selected for illustration a party carrying upon litters wounded persons to the Hospital of St. Louis, in the Rue des Récollets. Around and about the building are several Sisters, waiting to receive the sufferers.

The Hospital of St. Louis is one of the largest institutions of the kind in Paris: it contains 800 beds, which have been unhappily put in requisition during the recent slaughter.

THE TROOPS SHOOTING THE INSURGENTS IN THE STREETS OF PARIS.—(SEE NEXT PAGE.)

TROOPS SHOOTING INSURGENTS.

The Lower Illustration upon the preceding page depicts a scene of slaughter by the ferocious military, which is thus described by the special correspondent of the *Morning Chronicle*:—

On the Thursday night, when all resistance had ceased, information was given to a party of soldiers that some young men who were suspected of being implicated in the events of the day had taken refuge in a *café* in the Passage de Saumon. The officer in command marched thither, and found the information correct. Four young men, unable to escape, had hidden themselves on the ground, under the seats of the *café*. They were ordered to come out from their hiding-place, which they did, and at once surrendered themselves as prisoners. The soldiers were cool enough then, and were, in fact, performing the part of police rather than of military—cool, indeed, to a cold-bloodedness. For the four young men were dragged out into the passage, and, despite their prayers for mercy, or at least for a trial, were deliberately shot upon the stones there and then, in the view of the horrified inhabitants.

LAW INTELLIGENCE.

In the Court of Common Pleas, on Tuesday, before Lord Chief Justice Jervis and a special jury, the action of Simmonds, the silversmith, of Southampton-row, Russell-square, against Soyer and Symons, the proprietors of the Symposium, to recover £680 for the use of plate, china, glass, linen, and other articles, came on. Mr. Humfray, Q.C., and Mr. Lush were for the plaintiff; Mr. Sergeant Wilkins and Mr. J. Brown for the defendants. The claim arose out of an agreement for the plaintiff to supply the Symposium with "buttery." The contract was carried out, until Mr. Feeny, the first partner of Soyer, retired. The plaintiff had been paid £500 on account, and in September sent in a bill for the present amount, which he claimed under a notice, declining to act upon the original agreement, and demanding £100 per week for the use of his stock. The jury interrupted Mr. Serjeant Wilkins, as he was beginning the address for the defendants, by stating their opinion that there was no agreement for the £100 per week; the Lord Chief Justice stopped the case, and a verdict was entered for the defendants.

In the Court of Bankruptcy, on Wednesday, before Mr. Commissioner Fonblanque, the certificate meeting of W. Strange, sen., the bookseller in Paternoster-row, took place. Mr. Linklater appeared for the bankrupt. Mr. Strange was a bankrupt in 1825, and an insolvent in 1835 and 1840. His Honor, in giving judgment, stated that the failures of the bankrupt ought to have made him very cautious in his mode of carrying on business. He had, however, embarked in rather a hazardous description of trade, which had involved him in large law costs, not merely in one case but in several instances. For an alleged piracy on the ILLUSTRATED LONDON NEWS he had incurred £100 costs; in another action for libel in the Court of Session, and the costs were £160. He was, therefore, not by mere accident that the bankrupt had been involved in litigation. He was the publisher of a work which served to feed the morbid appetite of persons to investigate that which they had no business to pry into (alluding to the publication of the private drawings of her Majesty and Prince Albert). His Honor would not enter into the case, as his judgment would be the same as if the bankrupt had published a catalogue by auction of obscure pictures for one. He had gone out of his way of business to speculate in railroad shares, so that a loss of £1055 had been thereby incurred. He had transferred his stock to his son, and had gone to France, instead of meeting his difficulties as he ought to have done. His answers to the questions put to him in the examinations had been so unsatisfactory, that it was not until he had been threatened with the adjournment *sine die* that satisfactory answers could be obtained. His books had been imperfectly kept. Under all the circumstances, the bankrupt would not receive a higher certificate than of the third class, nor that until there had been a twelvemonth's suspension from the date of the first examination meeting. Protection was granted, on the application of Mr. Linklater.

THE NATIONAL LAND COMPANY.—In pursuance of an order of the Court of Chancery, under the Act of Parliament 14 and 15 Vict., entitled "An Act to dissolve the National Land Company, and to dispose of the lands and property belonging to it," the official manager is now inquiring, by means of a commission appointed to visit the spot, into the titles and present condition of the following estates, purchased by Mr. F. O'Connor, Mr. Ellis, on behalf of the company:—The O'Connorville estate, at Rickmansworth, Hertfordshire, 103 acres, purchased for £2344; Lowbands, Worcester, 160 acres, purchased for £8590; Minster Lovel, Oxfordshire, 207 acres, purchased for £9389; Snig's End, Worcester, 268 acres, purchased for £11,900; and Great Dodford, Worcester, 273 acres, purchased for £10,200.

THE ST. JAMES'S CLUB.—On Saturday the Master in Chancery Brougham appointed Messrs. Courtenay and Edwards, Percy Clarke, and Mr. Stevens, of Carlton Chambers, Regent-street, official managers and solicitors to investigate and wind up the affairs of this club, on the petition of the members of the committee of management, the Earl of Cardigan, Lieut.-General Pakenham, Commander Inglefield, Sir W. Anstruther, Major Donelly, Captain Sutherland, Admiral Roberts, Major Moneypenny and Campbell, Mr. Hennege, Messrs. De Burgh, Shrapnell, Dobinson, Cockburn, Lanchmere, Kay, and others, who state that the club was originated in 1848, by several general officers, who had long felt the want of an exclusive military club on a new and more liberal basis, which would admit princes of the blood Royal, Lords, and Lieutenants of counties, and full, half-pay, and retired officers in her Majesty's service. The entrance-fee was £15 for the first 600 members, £20 for all above that number, and 5 guineas annual subscription; the club mansion to accommodate 1000 members, and to be furnished in the first-rate style by the committee, and *agreements* being under the charge of the first artistes." The club was opened on this scale at 53, St. James's-street, but the management not being able to raise more than £5000 on debentures, the premises were supplied with wines and Farquhar for a loan of £5000, which was advanced on the promissory note of the committee in March, 1849. In May, 1850, at a general meeting it was proposed, the petitioners state, to obtain £5000 more on debentures, to obtain funds for client funds and meet pressing liabilities, but altogether only £3500 was so obtained. Captain De Butts, the secretary, then resigned, and Mr. Hampton, who took his place, directed the attention of the committee to the accounts of the club which they regretted to say were not from the commencement regularly or systematically kept. The petitioners state that during 1849 there were 259 paid-up members on the books, of which number 13 resigned or ceased to belong to the club, and 49 new members were elected. The name of the club was originally the Naval, Military, and County Service Club, but it was changed to that of St. James's Club, "experience having proven the expediency of maintaining it either in name or constitution as a class club." It was subsequently resolved to admit foreigners as honorary members. To relieve the club from its embarrassments, a contribution of £60 per member was called for, but, as it was only partially responded to, a resolution was come to to dissolve and wind it up. There is now due to tradesmen and others for goods supplied £18,000, £5000 to Messrs. Herries and Farquhar, £1900 due from persons on debentures issued by the club, £1800 for unpaid entrance fees and subscriptions, and a balance at the bankers' of £1329. Creditors are threatening actions, and Mr Crockford is understood to have taken the clubhouse furniture, fixtures, &c., in consideration of £5636.

LECTURES ON COMMON LAW.—On the 10th inst. the students attending the Inner Temple lectures who voluntarily tendered themselves for examination were examined by a committee of the Masters of the Bench of that society. On the 12th inst. the report of the committee, delivered by Dr. Lushington, the treasurer, and prizes were awarded as follow:—Mr. Henry James, Middle Temple, books to the amount of 20 guineas; Mr. John D. Mayne, Inner Temple, books to the amount of 15 guineas; Mr. Charles Smith, Middle Temple, books to the amount of 10 guineas. The treasurer also announced that the result of the examination as regarded all the other students was highly satisfactory.

JUSTICES OF THE PEACE.—On Wednesday a return to Parliament was printed, from which it appears that in England there are 18,742 justices in the commission of the peace, and 7308 of them have qualified. In Wales there are 1950 in the commission, of whom 857 have qualified. In Ireland the number in the commission is 3695, and 3,188 have qualified. There are 1645 borough magistrates in England and Wales, and in Ireland 169. There are only 28 stipendiary or paid magistrates in England and Wales, and 71 in Ireland. In Scotland there are 201 persons exercising magisterial functions, of whom 190 are paid, and 11 unpaid.

OFFICIAL APPOINTMENTS.—Frederick Walford, Esq., is appointed Recorder of Maldon, in the room of his father, J. G. Walford, Esq., deceased. Mr. Woodfield is appointed Inspector-General of Imports and Exports at the Custom-house, in the room of Mr. Irving, who has retired. Fr. Peacock, Esq., Q.C., is appointed Legal Member of the Supreme Council of India. Mr. Francis Lewis Shaw Merewether, Immigration Agent and Clerk of the Executive Council of New South Wales, is appointed Commissioner of Crown Lands for that colony. Mr. Hutchinson Hotherwall Browne, Water Police Magistrate for New South Wales, is appointed Immigration Agent, in the place of Mr. Merewether, promoted. Mr. John O'Neil Bourke is appointed Police Master and Water Police Magistrate. Mr. Michael Fitzpatrick will succeed Mr. Merewether as Clerk of the Executive Council. Major Edward Frome, R.E., formerly Surveyor-General in South Australia, is appointed Surveyor-General of Van Diemen's Land. Captain Lord Lionel Somerset, C.B., Deputy Quartermaster-General, and Lieutenant-Colonel J. Augustus Lloyd, now her Majesty's Consul-General in Bolivia. Mr. Andrew French Lynch is appointed a member of the Council of St. Kitts. Mr. Duncan George Campbell is appointed a member of the Legislative Council of St. Lucia.

THE GEORGE STEPHENSON TESTIMONIAL.—A meeting of the committee of the George Stephenson Testimonial has taken place. £3000 has been raised. It has been decided that the statue shall be erected in the centre of the Euston station. This is said to be the place most consonant to the feelings of Mr. Robert Stephenson.

TOMB OF THE LATE DUKE OF CAMBRIDGE.—The removal of the remains of the late Duke of Cambridge from the temporary resting place at the west end of Kew Church to the new sepulchral chamber at the east end of the church took place on Tuesday morning, in the presence of his Royal Highness the Duke of Cambridge, the Vice Chamberlain, the Rev. James Hutchinson, the vicar of Kew, Mr Phipps (of the Woods and Forests), Mr. Ferry, the architect, and others engaged in the ceremony. The new sepulchral chamber forms an apsidal termination to the church itself. It is ornamented by three niches, and the dome is covered with lead, decorated with ornamental bands. The walls are of red brick, with stone dressing, and the whole forms an elegant addition to the fabric.

METROPOLITAN NEWS.

FOUNDER'S-DAY AT THE CHARTERHOUSE.—On the 12th instant the celebration of the foundation of this institution by Thomas Sutton took place in the presence of a large number of old Carthusians. The proceedings commenced with service in the chapel, where a sermon was preached by the Rev. Henry Wright Phillott, M.A., rector of Staunton-on-the-Wye. The company then retired to the Great Hall, where an oration in Latin was delivered by Mr. Dyson, Classical master for the year. The Carthusians present afterwards dined together under the presidency of Archdeacon Hale, Master of the Charterhouse, who was supported by Sir Charles L. Eastlake, President of the Royal Academy, the Hon. and Rev. Charles Harford, George H. Frere, Esq., and by several other gentlemen. A handsome subscription was entered into towards defraying the university expenses of the orator, who is about leaving the school for Trinity College, Oxford. It may not, however, be generally known that, among the many and various benefits that the late Sir Robert Peel rendered his country, he, as one of the governors of the Charterhouse, proposed that a limited number of scholarships, all of which have hitherto been entirely in the gift of the governors of the Charterhouse, should be thrown open for public competition. This has eventually been carried into effect, and last May two boys were approved at an examination held for that purpose. Peter Blore, son of the celebrated architect, and Sheldon Amos, son of the eminent barrister, are now about to succeed on this valuable foundation, on account of vacancies which have just occurred.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—The annual meeting was held at the office in Hanover-square, on Saturday; the Right Hon. the Earl of Ducie in the chair, supported by his Grace the Duke of Richmond; the Right Hon. Lord Berners; Sir Robert Price, Bart., M.P.; Sir Digby Mackworth, Bart.; Rev. James Edmonds; Colonel Challoner; Mr. Raymond Barker; Mr. Grisseil, M.P.; Rev. G. Smithies; Mr. Villiers Shelley; Mr. W. Shaw; Professor Simonds; Professor Way; Don Domingo Sevignon; Dr. Wear; Dr. Calvert; Mr. Pusey; Mr. Jonas Webb; Mr. Blenkiron; Mr. R. W. Baker, &c. The Secretary (Mr. Hudson) read the report. Since the last general meeting, 132 members have been elected, 69 have died, and 149 have been removed from the list; so that the society now consists of 2121. He governors, 188 annual governors, 690 life members, 4076 annual members, 91 honorary members, making a total of 5034 members on the list of the society at the present time. The committee then filled up the vacancy in their body occasioned by the loss of the Hon. Capt. Pelham, by the election of Mr. Law Hodges, M.P. for West Kent. The finances are in a highly favourable state, and the council has been enabled to present to Government Stock to the amount of £11,190. The Windsor meeting has been held under most gratifying circumstances, and with perfect success. The members were honoured on the occasion by the gracious presence of her Majesty the Queen, the Royal patroness of the society; and his Royal Highness Prince Albert, as one of the governors, evinced a lively participation in the proceedings of the meeting, and with kind condescension sat down to dinner in the pavilion, with 300 guests of the society, whom he most heartily bid welcome to the Home Park. The Lewes meeting will be held on Monday, the 12th July, 1852; important additions to the prizes for agricultural implements will be made to draw attention to the motive power required by farmers. Every facility has been afforded by the Government for the importation of guano. The growth of flax would be encouraged by the council. The Rev. J. Linton suggested that Lord Palmerston should try and prevail on the Parvian Government to allow the exportation of guano as a manure free. The total income of the society was £5854 4s 4d., and the expenditure £5854 10s. 7d.; the balance at the close of last year being £749 1s 9d. A vote of thanks to the Earl of Ducie was passed. A memorial of 150 breeders of half-bred sheep to be permitted to exhibit in classes exclusively appropriated for mixed breed has been presented to the society.

GENERAL ANNUITY AND INVESTMENT ASSOCIATION.—The annual general meeting of this society was held on the 12th inst., at the London Tavern, to receive the 22nd annual report, which stated that the amount of capital on the 30th September, 1851, was £302,357, being an increase during the year of £7029, notwithstanding £13 807 having been paid to annuitants during the same period. The amount which had accrued to the society from the foundation to the present time, by members having discontinued their payments, was £39,507. The statement of accounts, from the 1st October, 1850, to the 30th September, 1851, included, amongst the receipts, £12,333 8s. 10d for premiums on the civil and military and nautical funds; £9327, the interest on capital; and £14,038, the sum drawn from the funds, the total receipts being £36,815. The report was adopted. Lieut.-General Pailly and Mr. J. H. Street, retiring by rotation, were reappointed directors. Mr. Gesst and Mr. Sowell were elected directors in the room of Messrs. Thorne and Wilson. Three of the rules of the society were altered. The seventh rule, which was that the trustees shall invest all moneys with the Commissioners for the Reduction of the National Debt, &c., now is, as amended to by Mr. Paul Pratt, that the trustees shall invest all moneys in strict conformity with the provisions of the statutes relating to friendly societies, &c.

CITY OF LONDON GENERAL PENSION SOCIETY.—On Wednesday a special general meeting of the directors of this society was held at the offices, 5, Old Jewry, to elect a treasurer. John Rolls, Esq., was in the chair. Luke James Hansard, Esq., who for several years past discharged the duties, having formally resigned, on the motion of William Latchmere, Esq., the thanks of the society were voted to Mr. Hansard not only for his official services, but also for his zeal in the welfare of the society, and his munificence in aid of its funds. Mr Kemble was then elected treasurer in his room.

TRIBUNALS OF COMMERCE.—On Wednesday a meeting of subscribers to the Association for establishing Tribun ls of Commerce was held at the London Tavern. A resolution to the effect that the report was received and seconded, to the effect that, considering the honorary secretary, Mr. Lyne, without consulting the executive committee, had tendered his resignation to the subscribers, the meeting should accept the resignation, and authorise all the means to be adopted to enable the committee to discharge all existing liquids outstanding accounts, and that, if desired by the subscribers, the remaining funds be equally divided, and the association dissolved, or that the acting secretary (Mr. Stanford) should be left in possession of the funds, and under the committee, receive additional subscriptions in aid of the cause, which latter course this meeting should strongly advise. This resolution having been put, seven subscribers were for it, and two against it. The chairman declared the resolution carried.

CITY ORTHOPÆDIC HOSPITAL, HATTON GARDEN.—At a meeting, held on Tuesday at the above hospital, Sir Peter Laurie, the hon. secretary, stated that the number of patients at present on the books was 366, and many others were waiting for admission. It was observed that the many applances requisite to the removal of such malconformation required the most extreme care in their construction.

SOCIETY OF ARTS.—On Wednesday evening, Mr. Jacob Bell, M.P., delivered the fourth lecture of the series on the Exhibition; Mr. G. Moffat was in the chair. Mr. Bell's subject was "Chemical and Pharmaceutical Processes and Products." He alluded to the question that had been raised, whether drugs should be admitted into the Exhibition, which was at length decided by Prince Albert and the Royal Commission in the affirmative. He illustrated the mathematical accuracy in the formation of certain crystals by reference to specimens on the table, of chrome, alum, magnesia, and sulphate of copper. He exhibited interesting samples of the following articles:—Iodine, bromine, chlorine, bichromates, strychnine, &c., as also dried plants. Austria had exhibited some fine specimens of glacial phosphorus; but the foreign collections generally were not so complete as those of the British exhibitors. Of tramarine, which had been obtained from lapis lazuli at a fire guinea per ounce up to 1814, it was now manufactured on a large scale, and the price was reduced as low as from 10d. to 1s. 6d. per lb. Mr. Bell referred to the deleterious effect of the fumes of phosphorus, by which persons affected by them were almost all there rarely surviving a couple of years. The use of glacial phosphorus had removed these fatal effects. The manufacture of alum and of iodine from the raw materials, kelp, from Iceland, was explained by the lecturer. The monopoly attempted by the Bolivian Government in bark had rendered the importation from Granada and other places necessary, and, if not so good as the former, still sufficient for the purposes of manufacture. He viewed the use of glass as a chemical manufacture, so that the Glass Palace itself might fairly fall under the section he was noticing. Mr. Bell pointed out the injurious effects of the duties on paper as a great hindrance to publications, and also of that on the high tax on spirits in the processes of the chemist, whereby the English chemist could not compete with Scotland, and especially foreign countries, in compounding such articles as chloroform, &c. A collection of articles invented, patented, or registered since October, 1850, is at present on exhibition in the rooms of the Society of Arts, Adelphi. They are ranged under the heads "railways, steam-engines, and machinery generally," "agricultural and horticultural instruments, &c.," "articles of dress," "sanitary and domestic articles, processes, &c.," and "miscellaneous articles." The whole forms a most interesting and instructive exhibition, comprising a variety of objects of great elegance and ingenuity, and the same instances involving principles of the most important nature. The samples and models exhibited amount in number to about 200, an inspection of which will amply reward the curiosity of all who take an interest in the arts and sciences as applied in this country.

NATIONAL PARLIAMENTARY REFORM ASSOCIATION.—A public meeting was held in the Lambeth School-Room, George-street, on Monday, John M'Leval, Esq., in the chair, at which resolutions were passed confirmatory of those at the reform meeting at the Horns Tavern recently.

NATIONAL PROVIDENT INSTITUTION.—The annual meeting was held on Monday, at the London Tavern; Mr. S. H. Lucas in the chair. The report stated that 1,000 new members had been elected in the annual premiums on which amounted to £18,493. The number of deaths since last report had been 97; and the claims arising therefrom, including bonuses, amounted to £46,830. Their present annual income was £183,240. The accounts for the past year showed the balance of receipts over the disbursements to be £14,052, increasing the capital stock of the institution to the sum of £738,492, which was invested in real and Government securities.

THE BREWERS AND THE PRICE OF BEER.—A public meeting of the working men of Hackney was held on Monday evening at the Globe, Birdcage-walk, Hackney-road, for the purpose of enrolling members in a branch league, which had just been established for the Hackney district, to agitate for a reduction in the price of beer. The meeting had been advertised to be held at the "Birdcage Tavern;" but, owing to the landlord of the Birdcage having suddenly retracted the permission he had originally given for the holding of the meeting in his house, the assemblage adjourned to the Globe. The chair was taken by Mr. Barker, and several members of the Bermondsey Parent League, as well as of the Bethnal-green District League, addressed the meeting.

LORD PALMERSTON AND THE LATE HUNGARIAN DEMONSTRATION.—Last Saturday a deputation from the borough of Marylebone waited upon the Right Hon. Lord Palmerston, at his Lordship's residence in Carlton-terrace, to present the resolution passed unanimously at the great public meeting held on the 31st October last, at the Princess' Concert-Rooms, presided over by Lord Dudley Stuart, and at which Sir B Hall and other members of Parliament were present, in favour of the illustrious Kossuth. The deputation consisted of nearly all the members of the Marylebone and St. Pancras representative vestries. Mr. Nicholay briefly explained the character of the meeting, and presented to his lordship the resolution which had been adopted. "That the thanks of this meeting are eminently due, and are hereby tendered, to the Right Hon. Lord Palmerston, her Majesty's Principal Secretary of State for Foreign Affairs, for his strenuous and highly-intended efforts to restore the liberation of Louis Kossuth." Viscount Palmerston received the deputation with the greatest courtesy, but surely tendered his acknowledgments for the good opinion which the borough of Marylebone had been pleased to express on his conduct with regard to the late affairs in Hungary.

ELECTION OF COMMON CONCHLMEN.—In consequence of St. Thomas's Day (the 21st of December), the time appointed for the election of Common Councilmen for Farringdon Ward Without, falling this year on a Sunday, the Lord Mayor has issued a precept directing the elections to take place next Monday, this day (Saturday) being inconvenient to most of the electors, and the charter admitting of the arrangement.

DIVISION OF ST. PANCRAS INTO ECCLESIASTICAL DISTRICTS.—On Monday a special vestry was held in the Vestry-hall to consider the report of the committee appointed to take the preliminary steps for applying to Parliament for a bill to oppose the Church Building Act, which, it is stated, empowers the church trustees to divide the parish into ecclesiastical districts. The Rev. Thomas Dale, the vicar, occupied the chair. After a long discussion as to the legality of proceeding with the question, it was decided by a show of hands that the business should be proceeded with, the vestry clerk deciding that such a course was in accordance with the law. The report of the committee having been read, Mr. Bullet pointed out the danger to be feared from granting undue powers in the church trustees. The Rev. T. Dale disclaimed having had any hand in the nomination or formation of the church trustees. A motion to adjourn the meeting was carried by a show of hands, and the matter will again come under discussion at the next vestry. On Wednesday the question came before the vestry; the Rev. T. Dale in the chair. Mr. Gibbon thought the vicar's explanation on Monday so satisfactory as to entitle him to the next order of the day, which was negatived by 30 to 15. The discussion was then renewed; an amendment of Mr. Barnes, for a committee of the vestry to meet the church trustees, to come to an amicable arrangement, so as to ensure ratepayers their present rights from compulsory assessments, and to prepare a bill in Parliament as to the ecclesiastical districts, was unanimously carried, and a vote of thanks to the vicar passed.

LONDON TEMPERANCE LEAGUE.—On Monday evening the third monthly meeting of this society took place at Exeter-hall, in the large room, where some 300 persons, mostly females, assembled. On the platform were the Rev. W. Reading, Messrs. Cruikshank, R Place, C. Lomax, of Manchester, and Kellog of the United States. A letter was read from Father Mathew, stating that he purposed to resume his temperance mission in England in the course of the ensuing spring, but regretting that ill-health prevented his attendance on the present occasion; and others, apologising for non-attendance, from Mr. Silk Buckingham, the president, and Messrs. James Taylor, of Birmingham; E Baines, of Leeds; Ryland, of Warrington; Prentice, of Manchester; Rathbone, of Liverpool; Gilpin, Fry, H. Vincent, and others of the most enthusiastic friends of teetotalism.

A COURT of Directors was held on Wednesday at the East Indiahouse, when Barnes Peacock, Esq., Q.C., was appointed fourth ordinary member of the Council of India.

ST. PAUL'S CATHEDRAL AND THE CITY SEWERS COMMISSION.—On Tuesday Mr. Daw, the chief clerk, read to the Court the following communication from Mr. Hodgson, the chapter clerk, in reply to the application for the proposed opening of the western area of St. Paul's Churchyard:—

"Dean's-yard, Westminster, Dec. 15, 1851.

"SIR,—With reference to your letter of the 10th, in which a meeting with the Commissioners of Sewers with the Dean and Chapter of St. Paul's is proposed, I am desired by the Dean and Chapter to inquire whether it is intended to en arge the approaches to St. Paul's Churchyard as suggested in my letter to you dated the 19th April, 1850, in consequence of which a conference took place at the chapter-house. The Dean and Chapter deemed it useless to hear a second conference on the same subject, they being confirmed in their determination not to enter again into the question of the widening of the ailing round the western area of the cathedral until measures are taken to enlarge the approaches to St. Paul's Churchyard.

"I am, Sir, your most obedient servant,

(Signed) "CHRLS. HODGSON, Chapter Clerk.

"Joseph Daw, Esq., &c."

Mr. Barber, the promoter of the plan, complained of the want of courtesy in the reply. Mr. Blake, Deputy Obbard, and Deputy Stevens took the same view as Mr. Barber. Deputy Lott suggested a conference, as the Dean and Chapter might not be aware of the intention of the Commissioners to enlarge the approaches by means of the new street from London-bridge, by the new Cannonstreet, to St. Paul's Churchyard. The removal of the house No. 1, Ludgate-hill, was strongly objected to by several members, and after considerable discussion, it was agreed to instruct the surveyor to report as to the area and its approximate value, with a view to a re-consideration of the entire matter after the Christmas recess.

METROPOLITAN SEWERS COMMISSION.—On the 12th inst. a special court was held. After disposing of appeals and summonses, the court passed a resolution authorising the borrowing of £8500 from Mr. H. Rains, on mortgage. Another resolution was agreed to, directing the payment of the sum of £5000, pursuant to an agreement between the said Henry Rains, the metropolitan commissioners of sewers, and the Bermondsey improvement commissioners, dated August 15, 1851.

NORTH-WEST PUBLIC SOUP KITCHEN.—This institution, through the instrumentality of which 200,000 persons have been temporarily assisted within the last seven years, is about to make a Christmas-day distribution, which will ensure to no less than 600 individuals a comfortable dinner of soup, plum-pudding, and bread, at the kitchen in Bath-place, New-road.

THE CHINESE COLLECTION.—The interesting Chinese Collection, showing the habits, manufactures, and customs of this singular people, so long exhibited at Knightsbridge, and so popular throughout England, the property of the late Mr. Dunn, collected with great care and expense during his residence in China, and sold by auction by Messrs. Stanton, at their rooms during five days. The sale terminated on Tuesday. The principal purchasers were Messrs. Hewett and Co., Fenchurch-street.

SINGULAR ESCAPE OF BOYS IN THE STREETS.—Two inquests, rendered remarkable by the singularity and similarity of the two cases, were held on Monday and Tuesday, by Mr. Carter, on the body of Mary Wilson, aged 84, living in Ratcliff, and the other, Sarah Highbanks, aged 80, who both died from injuries received by being knocked down in the streets by boys who were playing. As there was no positive testimony, the jury returned open verdicts.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday last in the 30 principal English metropolitan districts:—Males, 802; females, 736: total 1537. Deaths during the same period:—Males, 589; females, 605: total 1194. The rate of mortality, it is remarked in the official report, is still high. The average of six corresponding weeks in the years 1845-1850, is 1194, the same as the present return. The present return is to deaths exhibit, however, a marked improvement, which, under the influence of a milder temperature, which had risen as high as 1316, have declined to 1194 in the past week. Taking for comparison the corresponding weeks of 1841-50, with the exception of that part of the series which belongs to 1847, when influenza swelled the mortality of the week to 4416, it appears that the average number of deaths was 1031, or nearly a correct allowance for increase of population, 1134. The return of the last week shows an increase of 60 on the corrected average. The weekly mean temperature, which during the earlier part of November fell to 40 degrees, or 12 degrees lower than it had been during the previous month, and afterwards suffered a further reduction to 35 degrees (which is about 8 degrees less than the average of that period), again rose, in the week ending 6th December, to 39·8 deg., and in the week ending 13th to about 3 deg. above the average. In our previous returns diseases of the respiratory organs rose to 332; these have now fallen to 284, and consumption is decreased from 180 to 142. Bronchitis has improved from 136, and inflammation of the lungs 105, to less than 83 being among children. The increase above the average of bronchitis is remarkable. Epidemic diseases in the aggregate are heavy: 243 have died. Of the deaths now that 37 were from smallpox cases, 11 measles, 34 scarlatina, 24 hooping-cough and croup, 21 diarrhœa, 4 dysentery, 7 cholera, 5 influenza, 64 typhus, 11 erysipelas, &c. Amongst the special cases in the Registrar-General's return, the death of a man from consumption, aged 72, who had never walked or talked, was fed with a spoon, and had always been treated like a child, is recorded; there was another child with the same infirmity in the same family, who died at 15. The deceased was full grown, and had possession of his intellect. The death of a seaman from his feet being frostbitten, are specified.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily height of the barometer in the week was above 30 in. on Sunday, Tuesday, Thursday, Friday, and Saturday; the mean of the week was 30.140 in. The mean temperature of the week was 44·8 deg. The daily mean was highest on Wednesday, when it was 51·5 deg., and lowest on Friday, when it was 33 deg. On the former day it was about 10 deg. above the average of corresponding days, on the latter it was about 9 deg. below it. The mean temperature was above the average during the week, except on the last two days The wind was generally in the south-west.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The *National Gazette* of Berlin states, from Vienna, that the Emperor of Austria has refused to receive the Earl of Westmoreland, to present his letters of credence, until an answer shall have been returned to a note of the Austrian Cabinet, complaining of the offensive terms in which Lord Palmerston spoke of Austria, in reply to a deputation who waited on him with an address respecting M. Kossuth.

The famous clipper yacht *America*, purchased by Lord De Blaquiere for 4000 guineas, is reported, according to the *United Service Gazette*, to have so much fallen off in his Lordship's estimation, that the gallant and noble officer would not accept an offer of 3000 guineas for her. She is now *en route* to the Mediterranean with her noble owner.

A despatch from Constantinople, dated Nov. 25, reports the Governor of the Dardanelles as having inflicted the punishment of the lash upon the Dragoman of the Austrian Consul, upon which all the Consuls withdrew their flags, and broke off all intercourse with the Governor.

The new Archbishop of Baltimore, Dr. Kenrick, has just issued a pastoral, summoning, in the character of apostolic delegate, a national council of the Archbishops and Bishops of the Roman Catholic Church in the United States, to meet in his cathedral on the fourth Sunday after Easter in the ensuing year.

The extensive estates in West Yorkshire of Lord Wharncliffe have recently been revalued, and in some instances reductions of from 20 to 30 per cent have been made in the rentals.

A sermon will be preached in aid of the funds of the excellent Printers' Pension Society on Sunday morning next, the 21st inst., at St. Helen's Church, Great St. Helen's, Bishopsgate-street, by the Rev. John Cox, M.A., F.S.A., the vicar. We hope that the benevolent efforts of the rev. gentleman, who has so generously come forward on behalf of this institution, will be responded to by a liberal contribution at the doors.

The city of London stands upon 620 acres. The fixed property in houses built on this small spot is estimated at forty millions sterling; and the value of moveable property in the City, according to the *Railway Journal*, is considered to be one hundred millions sterling.

The *Bedford Times* states that crime in Bedfordshire and the adjoining county of Huntingdon is greatly on the decrease.

The authorities of the city of London, acting under the powers given by the words surreptitiously introduced into the Coal Act, have made a charge of 1s. per ton on all coals introduced into Hertford and other places within twenty miles of London, measuring as "the crow flies." The price of coals in Hertford is, therefore, 1s. per ton higher than at Ware. There is no longer any hope of relief except by an appeal to the justice of Parliament.

A correspondent of the *Scotsman*, under the *nom de plume* of "Colonist," has made the munificent offer of £1000 towards the organisation of a scheme for the relief of the destitute classes in Edinburgh by means of emigration, under condition that other £5000 shall be raised so as to place the scheme on a substantial basis.

The Legislative Assembly of Hamburg has just rejected, for the second time within these few months, a proposition made by the Senate, on the representations of Austria, tending to restrict the liberties of the press by penal laws.

A customs and commercial convention has been concluded between Holland and Prussia on behalf of the Zollverein.

The proprietors of the leviathan vessel, the *Great Britain* steamer, now lying in the Sandon graving-dock at Liverpool, have taken out her steam machinery for sale.

The Council General of Genoa has just contributed 26,000f. towards the erection of the monument to Columbus, which is to be erected in that city.

The city and suburbs of London were visited on the 12th with a fog more dense than any which has occurred this year, or, indeed, during any year for the last eight or nine. All the shops, public offices, and buildings were lighted up with gas. On the river, the railways, and in the streets, the traffic was considerably interrupted.

According to an annual statement issued by the Vice-Chancellor of Oxford, the expenses of the police establishment amounted to £1400.

The *Genoa Gazette*, an official journal, contains the following:—"The Duke d'Aumale, on his way from Naples, and travelling under the name of Duke Eugène de Tellancilier, passed last night (the 8th) through Genoa, on his way to Turin."

The civil engineer, Mr. Shephard, has arrived in Copenhagen, for the purpose, it is said, of opening negotiations with the Government for laying down the electric telegraph between this city and Hamburg.

Anderssen's new vaudeville, "Hyldemoe," has been performed at the Casino Theatre, Copenhagen, but with indifferent success. Some of the scenes are pretty enough, but the whole is too laboured and artificial. The text has just been published.

The steam communication between West Jutland and England has ceased for the season. From Tönning there has been exported this year a total of 14,797 cwts. of sheep, 7 horses, 60,8283 lbs. butter, 51,121 lbs. bacon, and 1793 barrs s of oats, in nearly equal portions, to Lowestoft and London. The prices obtained have been satisfactory.

The University of Kiel has between 140 and 150 students; that of Copenhagen about 1000.

The Duke de Bassano, French envoy to the Court of Hanover, arrived on the 12th at Brussels, on a visit to the family of the Duchess, daughter of Baron de Hoogvorst.

According to the official statement published in the *Diario do Governo*, 2140 pipes of wine were shipped from Oporto in the month of October, leaving a total of 88,359 pipes, of which 72,881 were shipped in first quality. Wines in Portugal have fallen considerably, in consequence of the deplorable accounts from the Brazils. The very best wine for that market, which was shipped three months ago at rs. 80, or £11 10s., is now sold at rs. 40, or £9 8s., per pipe.

The price of food is enhanced by the long-continued drought in Portugal, which threatens such a scarcity that supplications were offered up in all the churches for a supply of rain. In the Alemejo the cattle were dying for want of food and water, and the mortality amongst the pigs had been so great that the price of pork is 6d. per lb.; wheat of the finest quality is 51s.; barley 29s. and 33s. per quarter; brandy and oil have declined considerably in price.

The Florence official paper of the 29th November announces that the Grand Duke, by a decree of the 25th, had created Cavalier of the Order of Merit of St. Joseph, Dr. Henry Connors, medical attendant to *his Highness* Prince Louis Bonaparte, President of the French Republic.

An interesting shipment has recently taken place to the church missions at Sarawak, in Borneo, in the shape of 5 cwt. of type, the gift of Mr. Samuel Lewis, as a further supply for the printing-press which, with some type, was presented to the mission by Mr. Sharpe, the banker.

The *Bucks Chronicle* states that a Dissenting minister, named Fletcher, aged 108 years, preached at Winslow Independent meeting-house.

For the submarine telegraph between England and Ireland active measures are about to be taken. It will require about sixty miles of cable, or three times the length of that between Dover and Calais.

Letters from Rome of the 10th state that the police insisted on sending away M. Balbi, in spite of Lord Palmerston's remonstrances. Lord Middleton had been placed under the surveillance of the police on account of the colour of his carriage. The Bishop of Gibraltar was at Rome on the same 10th, endeavouring to obtain permission from the Pope to erect a Protestant church in the city. A schism prevailed in the English Protestant congregation, owing to a disagreement between the Bishop and the Church committee touching episcopal jurisdiction.

The railway in Galicia, between Lemberg and Bochnia, is to be commenced next spring. The works will be begun simultaneously in both places.

M. Alexandre Dumas commenced in the Paris *Presse* on Thursday his own memoirs. The work is to extend to eight volumes, and the publishers state that all the "copy" is already in their hands; and add, that Dumas never published any of his multitudinous personages as figuring in scenes more strange or varied than those he has described as passages in his own life.

In Potsdam the Prussian brewers have made an energetic opposition to the new beer taxes.

Mr. Stephenson is now in Egypt, travelling over the surveyed line of railway, with the view of determining on certain suggested deviations, preparatory to the commencement of the earthwork, which was to be in operation soon. The required labour is to be provided from the neighbouring districts, one village furnishing fifty men. The rate of wages is to be determined by the average of the locality as paid in agricultural employment.

Last week the *Maudstone Journal* recorded the deaths of four aged inhabitants, whose united years amounted to 396; this week its obituary contains the names of three whose united ages amount to 249 years—the average of the seven being nearly 80 years each.

Barnes Peacock, Esq., Q.C., was nominated fourth ordinary member of the Council of India, by the Court of Directors, at the East India House, on Wednesday.

The chimney-stalk of one of the iron-works at Linlithgow was blown down in the recent gale, and some hundreds of people will, in consequence, be thrown out of employment till its re-erection.

The Duc de Bordeaux has left Vienna for Prague.

The Lord-Lieutenant of Ireland has been pleased to appoint Sir Robert Vandeleur Newman, of the 1st Highland Light Infantry, to be his extra aide-de-camp, vice Captain Conway Seymour, who has retired from the army.

The Lord Chancellor has appointed William Baldwin, Esq., of Lisard Castle, to the commission of the peace for the county of Cork.

The *Piedmontese Gazette* of the 13th quotes letters from Verona announcing the arrest of several persons of note, including the richest banker of that town. It is believed three arrests are owing to coupons of the Mazzini loan having been found in the possession of the prisoners.

The Emperor of Austria having learned that Field-Marshal Radetzky intended to purchase the estate of Kinder Thun, in Carinthia, has ordered the States of the province to buy it, and to allow the Marshal and his wife to enjoy it during their lives.

CHESS.

TO CORRESPONDENTS.

A SUBSCRIBER.—The book of the Tournament is rapidly approaching completion

HUDSTON.—Mr Löwenthal's chess tour has, we are glad to hear, commenced auspiciously. He has already visited the two great Universities of Oxford and Cambridge, where he has awakened a keen enthusiasm for chess among the graduates, and has won from them, as he deserves, the most gratifying and solid marks of their esteem

C. H.—Apply at the office of the *Chess-player's Chronicle*, 31, King William-street, Charing-cross

EPISCOPUS—1. In Castling on the Q's side, you must move the King to Q B's sq, and the Rook to Q's sq 2 Certainly

K. K. of Sunderland—A Pawn can only be taken in passing by a *Pawn*

J W D, G G H, SCHOLASTICA, G E S.—They are now under consideration

HEREFORT.—The rule, we believe, is 5s

R R.—It shall be reported on immediately

H H.—See the notice above to "Episcopus"

G B T.—You will find a complete treatise on the odds at Chess, showing how the player who receives the Queen, or a Rook, or a Kt, or the Pawn and two moves, or the Pawn and one move, can best avail himself of the advantage, in the "Chess-player's Companion," published by Bohn about three years ago

JUVENIS.—Lincoln's-inn—The merest beginner at Chess must see that Black's game is utterly untenable. If he move out of check, White obviously brings over his Q Kt, and wins directly

C. G. Barnes—The position of the White King strikes us as more curious than that of the Black. We presume the game was continued by very young players

S——Unquestionably you are right. It is an obvious mate in three moves

J M, of Sherborne—You may have the paper direct from the office by post, without any increase of price

COX and ROBINSON—It shall be examined

SOLUTIONS OF PROBLEM No 411 by A Veteran, B D, Phiz, Mercator, Ernest, Quilp; J M, of Sherborne; M S B

SOLUTIONS OF PROBLEM No 412 by Judy, Dorevon, S——y, C E B, Hester, Baronis Barbd, Paulos, Jack of Shrewsbury; J W D, of Brompton; B D M; X, of Calstor; F W B, J B K, Mors, Arbiter, Hall, J M of Sherborne, Dunlano, St Edmund, M. P. B F W, are correct. All others are wrong

*** Commissions from Major J, Warsaw; J C, Calcutta; Dr C, Allwal; K, St Petersburg; D, Paris, replied to by post. Mr Löwenthal's letter shall appear

SOLUTION OF PROBLEM No. 411.

Black: K at Q 3d; Ps at K Kt 4th, K 4th, Q B 3d and 4th.

White, playing first, mates in five moves.

NATIONAL SPORTS.

The Christmas week is usually barren of sporting events of interest, and the ensuing one will not be an exception. The steeple-chase calendar is blank, and that devoted to the "lovers of the leash" has only three fixtures; viz. Singleton, on Monday; Malleny, on Tuesday (each meeting two days); and Belsay, on Wednesday.

TATTERSALL'S.

MONDAY.—The sales attracted a considerable number of the members to the Corner, and gave a decided impulse to the Derby betting. Angur and Claverhouse were backed with spirit, the latter, however, leaving off weak in the market. Orello, Kingston, and The King of Trumps were also in good favour, although the betting on them was not by any means heavy. The averages at the close were as under:

CHESTER CUP.		
50 to 1 agst Merry Bird	66 to 1 agst Cossack	66 to 1 agst Redm. O'Hanlon
66 to 1 —— Lady Evelyn	66 to 1 —— Gray Tommy	100 to 1 —— Paquetta
DERBY.		
8 to 1 agst Hobble Noble	25 to 1 agst Womersley	25 to 1 agst Vortex
100 to 6 —— Augur	25 to 1 —— Orello	40 to 1 —— Fillis
100 to 6 —— Claverhouse	25 to 1 —— Eliott	40 to 1 —— Kingfisher
20 to 1 —— Kingston	33 to 1 —— Lapidist	40 to 1 —— Maldstone
25 to 1 —— K. of Trumps (t)	33 to 1 —— Daniel O'Rourke	

THURSDAY.—A few scores of ponies were invested at the following prices:—

DERBY		
9 to 1 agst Hobble Nobble	25 to 1 agst Vortex.	40 to 1 agst Little Harry
16 to 1 —— Claverhouse	40 to 1 —— Fillis	
CHESTER CUP.—No betting.		

GREAT RUNNING MATCH.—TWENTY MILES UNDER ONE HOUR FIFTY-EIGHT MIN. THIRTY SEC.—This unprecedented effort came off on Tuesday at Copenhagen-grounds; more than 5000 spectators were present. Manks made the start at apparently a very easy pace to himself, going over the first mile in 5 min. 56 sec. At the commencement of the twentieth or last mile Manks had just six minutes and three seconds to go over it to win the match, or to perform 20 miles in less time than Macfield did the same distance on the turnpike road in 1844. This Manks succeeded in accomplishing, having just 42 seconds to spare. At the finish, Manks ran or rather fell into the arms of his backer, evidently considerably exhausted from his doing this great and never-equalled feat.

IRISH-GROWN FARM PRODUCE.—At the Smithfield Club Show, last week, there was exhibited a splendid collection of Irish-grown farm produce, by the Royal Dublin Society, through his Excellency the Earl of Clarendon. Similar specimens were shown at the late autumnal exhibition of the society in Dublin, and are the best possible index to the capability of the country. We have been favoured with a few specimens. Several of the Swedish turnips weigh 20 lb. each; red globe mangel, weighing 22½ lb., and producing to the Irish acre, clear of tops, 112 tons, tops weighing additionally 35 to 40 tons per acre. The object of the Dublin Royal Society in this exhibition is the introduction of capital, in addition to more skill and enterprise, into Ireland.

EAST INDIA COMPANY'S COLLEGE AT HAILEYBURY.

On Monday the half-yearly examination of the students at this college destined for the civil service of the East India Company was held in the presence of a deputation of the directors and several distinguished visitors. Amongst these pre ent were Mr Shepherd, chairman; Sir J. W. Hogg, Bart., M P., deputy-chairman; Mr. William Wigram; Lieutenant-General Sir James L. Lushington, G.C.B.; Sir Henry Willock, K.L.S.; Mr. W. H. C. Plowden, M.P.; Sir Jonn Herschel, Bart.; Lieut.-General Barr, Right Hon. Dr. Lushington, Rev. Charles Lane, &c.

The report of the Rev. Principal Melvill, setting forth the satisfactory progress of the students during the past half year, having been read, the trials of skill and other exercises of the students were then inspected, and received much commendation. The company then adjourned to the hall of the college, where the prizes are usually distributed. Previous to this ceremony, however, so gratifying both to the successful pupils and their friends, another form, scarcely less grateful, though more trying to the nerves of the students, is prescribed by the custom of the college, that the senior pre emen of the term should read extracts from those studies in which they have shown most proficiency. The English essay alone is open to the competition of the whole school, and it was gained on this occasion by Mr. Hope, who is now in his third term, though it may be noticed to the credit of this young gentleman, that he bore off the same prize this time last year, when he was only in his first term.

Among the other highly distinguished students may be mentioned Mr. Herschel, the eldest son of Sir John Herschel, who bore off six of the seven prizes given in the second term; Mr. Lushington, the son of Dr. Lushington; Mr. Ousley, nephew of Sir Gore Ousley; and Mr. Cark, son of Mr. Clark, of the cadet department at Addiscombe.

The exercises commenced by Mr. Hope reading his prize essay on the question.—"How far is it desirable for Governments to leave works of national utility to private enterprise?" In the reading of which he was frequently interrupted by the cheers of his fellow-students.

Other exercises, comprising translations from English into Persian, Telooguo, Hindustani, and Sanscrit, having been read, the chairman proceeded to deliver the prizes, at the close of which he delivered a long address to the students on their duties, acquirements, &c.

A *déjeûner* concluded the day's proceedings.

The *Liverpool Albion* says that, on Wednesday week, three sheriffs' officers boarded the United States mail steam-ship *Baltic*, when on the point of sailing for New York. They stated that they were in search of an absconding debtor, and, as Captain Comstock refused to wait till they found him, they were carried off, notwithstanding all their entreaties to the contrary.

EARTHQUAKE IN THE EAST.—The *Impartial de Smyrne*, in its correspondence from Salonica, has melancholy accounts of an earthquake at Berat. We learn that a part of the fortress had been thrown down, and 400 soldiers buried in the ruins. Some days after the catastrophe, and after many exertions, their lifeless bodies were withdrawn from the ruins, and their numbers ascertained. About 300 houses, two mosques, and a church suffered considerably, and many are no longer habitable. The Governor of Yanina sent tents and assistance to the remainder of the soldiers in garrison there. Among Christians and Mussulmans, 800 persons are missing, but it is as yet unknown how many among those have been lost, or how many have sought safety in flight. Near to Berat the top of a mountain was detached from its base, and thrown to a considerable distance. In the centre a crater has been formed, from which dense volumes of black smoke, stones, and lava are emitted. Fetid sulphurous exhalations escape and corrupt the air. The villages and environs of Berat have suffered great damage.

FIVE HUNDRED PERSONS DESTROYED BY A WATERSPOUT.—Intelligence was received at Lloyd's, under date Malta, Monday, the 8th instant, of a most awful occurrance at the island of Sicily, which had been swept by two enormous waterspouts, accompanied by a terrific hurricane. Those who witnessed the phenomena describe the waterspouts as two immense spherical bodies of water reaching from the clouds, their cones nearly touching the earth, and, as far as could be judged, at a quarter of a mile apart, travelling with immense velocity. They passed over the island near Marsala. In their progress houses were unroofed, trees uprooted, men and women, horses, cattle, and sheep were raised up, drawn into their vortex, and borne on to destruction; during their passage rain descended in cataracts, accompanied with hailstones of enormous size and masses of ice. Going over Castellamare, near Stabia, it destroyed half the town, and washed 200 of the inhabitants into the sea, who all perished. Upwards of 500 persons have been destroyed by this terrible visitation, and an immense amount of property, the country being laid waste for miles. The vessels in the harbour suffered severely, many vessels being destroyed, and their crews drowned. After the occurrence numbers of dead human bodies were picked up, all frightfully mutilated and swollen.

FIRES.—The habitation of an aged man, a carpenter, in Ball's-court, Whitechapel, was destroyed by fire on Tuesday, at one o'clock in the morning, and the names spread so rapidly that the poor man perished, despite of every effort to save him. The premises of Mr. Almond, army accoutrement maker, Swan-yard, near Long-acre, were destroyed by fire on Tuesday morning, at eight o'clock.

THE POST OF SOUTHAMPTON.—Within twelve days eleven large foreign steam-packets, nearly one a day, arrived at, or have been despatched from, the port of Southampton; viz. the *Great Western*, for Central America; the *Hermann*, for the United States; the *Madrid*, for the Peninsula; the *Severn*, for Brazils; the *Montrose* and *Iberia*, from Spain and Portugal; the *Dee*, from the West Indies; the *Teviot*, from South America; the *Sultan*, for Egypt, and *Indus*, from the Mediterranean. It is calculated that nearly 50,000 letters have been brought home and taken out by these steamers, also specie to the value of nearly a million sterling, and upwards of 500 passengers. It is estimated that, for every thousand that arrives at or leaves Southampton by the packets, two friends or relatives, chiefly of the wealthy classes, visit the port to see him off or welcome him home.

THE (LATE) GREAT EXHIBITION.—Notwithstanding the intimation given to the foreign exhibitors that all the goods were to be removed by the 12th instant, last Saturday, there is still a large quantity within the Building, chiefly belonging to France and some of the German States. The principals of our French friends have been materially increased by late events; and, either from miscalculating the quantity of goods to be re-conveyed to France, or from the want of previous arrangement, there are no means of shipping them off, and the Custom-house authorities have been induced to relax somewhat of their strict rules, and allow the goods to be deposited for the present on the Ordnance Wharf, as if in bond. Although the Building has been handed over to the contractors, Messrs. Fox and Henderson, a small executive staff, under the command of Lieutenant Tyler, still remains. They have the charge of the embryo national museum, and are the recipients of the samples and specimens contributed by the various colonies. It is still hoped that the Building will be so completely cleared of the goods that it may be thrown open to the public on the 1st of January, al already arranged. All the entrances have now been shut up, except the public entrance on the south side of the east end, through which the foreign packages are conveyed away. The number of policemen on duty has now been reduced to a mere handful, and the vast pile is rapidly assuming a look of desolation and gloom as seen in the haze and twilight of a winter's evening.

DESIGN FOR THE GREAT EXHIBITION BUILDING AT NEW YORK.—A design, by Sir Joseph Paxton, for the intended Exhibition of the Industry of all Nations at New York, was on view on Tuesday in Carpet-street, Piccadilly. The plan is upon a similar principle to that of the Crystal Palace in Hyde-park, and the materials consist of glass, iron, and plate. The length of the building is intended to be 600 feet, and the breadth 200 feet. There are two entrances, one at each end, and the construction of the doorways is somewhat similar to that of the transept-entrance to the Exhibition in Hyde-park. The roof is to be of plate, in order to resist the weight of snow to which it may be exposed in the United States. The structure will be built upon arches, and the galleries will be supported by brackets, which will add materially to the strength of the building, and render it better adapted for permanent use than the "great original."

OPENING OF A NEW WORKING-MEN'S READING-ROOM, AT CARLISLE.

It is now nearly thirty years since Mechanics' Institutes were originated by the excellent Dr. Birkbeck. Unquestionably the benefits which have accrued from their establishment have been very considerable, although they have not reached the grade of recipients for whom they were originally intend d, namely, the working classes or labourers, but have mostly passed into the possession of clerks, smaller tradesmen, and others of the middle ranks, while the labourers have been left without any economical provision for their intellectual advancement. This blank or void has, however, indirectly given rise to a fearful amount of dangerous reading among our artisans, for want of ready access to literature of a healthier class, the taste for which Mechanics' Institutes were originally intended to feed and foster.

To remedy a deficiency of this kind which has long been felt at Carlisle, an Industrial Read.ng-room has just been built by the John-street (Botchergate) working-men; and the inauguration of the new edifice took place on Monday evening, the 1st inst., under very interesting circumstances.

The foundation-stone was laid on the 12th of July last, by the then Mayor of Carlisle (John Hewson, Esq.), and the building has been finished in a highly satisfactory manner; Mr. Hogg, architect, kindly acting gratuitously for the members. The whole of the building work was executed by Mr. Thomas Lattimer, and the wood-work by Messrs. Coates and Lettie. The structure is in the Elizabethan style, and has a south-east and south-west aspect. The whole area of the ground is 70 feet 6 inches by 52 feet 8 inches, being equal to 3713 square feet, or 412¾ square yards, containing as under:—Reading-room, 53 feet long by 24 feet wide, the area of which is 1272 square feet; the school-room, 25 feet by 24 feet 6 inches, the area of which is 612 square feet; committee-room, 24 feet 6 inches by 10 feet 2 inches wide, the area of which is 249 square feet; the library (a gallery above the committee-room) is 24 feet 6 inches by 14 feet 6 inches, containing 355 square feet. The total area is 3713

WORKING-MEN'S READING-ROOM, JUST OPENED AT CARLISLE.

square feet; the reading-room, school-room, and committee-room occupy 2145 square feet, leaving for the back offices and yards 1570 square feet, or 174½ square yards.

About half-past six his Worship the Mayor (Thos. Nelson, Esq.), wearing his official gold chain, entered the gallery, followed by the Very Rev. the Dean (Dr. Tait); W. N. Hodgson, Esq., M.P.; J. Hewson, Esq., ex-Mayor; E. G. Mounsey, Esq.; Dr. Elliot, Capt. Monins, R. Ferguson, Esq.; H. Rawson, Esq.; R. Bendle, Esq.; E. Norman, Esq.; T. T. Railton, Esq.; Rev. J. Short, Rev. E. Bradshaw, Rev. C. C. Lowndes, Rev. T. Hind, Rev. J. J. Osborn, Rev. J. W. Rowe, Rev. L. Currie, Mr. Hogg, architect, and other gentlemen anxious for the success of the institution. On taking their seats they were received with several rounds of applause.

Surveyed from the platform, the room presented a most animated appearance. About 500 persons were seated at the tables, upon which was set out a profusion of tea and cake. The decorations were tastefully arranged by Messrs. Sanderson and Fisher. They consisted of sculpture supplied by Mr. John Rushton; and mottos and banners furnished by Messrs. H. Tweddle and Son. On the wall behind the platform were emblazoned the Royal arms, the city arms, the arms of F. H. Howard, Esq., M.P.; W. N. Hodgson, Esq., M.P.; Thos. Nelson, Esq.; Capt. Monins, &c.

After tea, the glee of "The Chough and Crow" was admirably sung by members of the choir of the cathedral, accompanied on the pianoforte by Mr. Ford; and three other glees were afterwards sung with equal ability in the intervals of the speeches.

The proceedings were opened by the Mayor, in an appropriate address, in which he explained that the building had been raised by the energy and perseverance of a few working-men, supported by voluntary subscriptions. (Hear, hear.) To no one were the members of this institution more indebted than to Dr. Elliot—(Applause)—who had supported and encouraged them at a time when such institutions were little heard of, and when they were not appreciated as they are now.

The Secretary, Mr. W. Bowman, then read the third general report of the Reading-room, which is managed, as hitherto, entirely by working-men, the members numbering 200. The room is well supplied with newspapers, magazines, and other periodicals, which are much read by the members, who throng the room each evening; and it is pleasing to see what eagerness they manifest in the pursuit of knowledge, in which many have been very successful. Not a few can now converse upon scientific and other subjects, of which, only a short time ago, they were almost entirely ignorant. The number of books issued from the Library is about 3000 since the last *soirée*.

The Evening School in connexion with the institution also continues to be productive of much good to the younger members and members' children, who are employed during the day in the several public works. The report then details the circumstances under which the new building has been erected, commencing with £20 raised at a *soirée*, aided by the gentry and tradesmen of Carlisle and its neighbourhood; and Mr. Mounsey's handsome present of the ground upon which the room is erected, and his loan of £100 at a low rate of interest. The whole cost of the building is stated at £293, of which £60 remained unpaid at the date of the report.

The assembly was addressed during the evening by the Dean of Carlisle, Mr. W. N. Hodgson, M.P., Mr. Mounsey, Mr. Hewson, Dr. Elliot, Captain Monins, and other gentlemen. Thanks were voted to the Mayor; and, after the National Anthem had been sung by the choir, the meeting separated.

DESTRUCTIVE FIRE AT FISKERTON MILL, NEAR SOUTHWELL, NOTTS.

TESTIMONIAL TO CAPTAIN BAKER, OF THE "PEKIN" STEAMER.

This elegant piece of Plate, manufactured by Messrs. Hunt and Roskell, has just been presented to the gallant Captain of the *Pekin*, whose perilous position in the China Sea was engraved and described in the Illustrated London News for Dec. 6, page 661.

The Plate bears the following inscription:—

PLATE PRESENTED TO CAPTAIN E. BAKER, OF THE "PEKIN" STEAM-PACKET.

Presented to Captain E. Baker by the passengers on board the *Pekin*, between Hong-Kong and Singapore, in token of their regard and admiration of his conduct during a typhoon, on the night of October 1st, 1851.

DESTRUCTION OF FISKERTON MILL, NOTTS.

On the morning of the 8th inst. a terrible calamity occurred in the neighbourhood of Southwell, about six miles from Newark, by which property to a considerable amount was destroyed by fire; and five men, in attempting to extinguish the flames, were killed by the fall of a portion of the building in which the conflagration occurred. The scene of this sad catastrophe was Fiskerton Mill, standing in the river Greet, at a few yards from its junction with the Trent, within the parish of Fiskerton.

The building was occupied by Mr. Joseph Marriott: it was five stories high, and was worked partly by steam and partly by water power. The mill commenced operations at a very early hour on Monday, and at two o'clock three pairs of French stones out of five were at work—the whole motive power being thus supplied by the water

At about two o'clock, Charles Ward, the miller in charge, hearing a crackling noise, ran into the top dressing-room, and there found that the wood round which the straps turned was on fire. He instantly fetched a bucket of water, and threw it down the spouts, but without at all staying the flames. He then found the floor and other wood-work were on fire, when he aroused his master and the foreman, and galloped on horseback to Southwell for a fire-engine; a messenger being despatched for the same purpose to Newark.

Meanwhile the labourers and others that could be obtained, carried sacks of wheat and flour out of the burning premises, of which, at the time the fire commenced, they contained upwards of fifty quarters; but within half an hour the roof fell in, carrying the several floors to the basement without the slightest warning. At this moment a miller's apprentice was coming out of the door, and was driven forward by the rush of wind occasioned by the fall of the roofing, floors, &c. A labourer, with a sack of flour on his back, was knocked down and partly

THE CORK AND BANDON RAILWAY.—THE CHETWOOD VIADUCT.

buried in the ruins, but was extricated; but two other men, each with a sack of flour or grain, were struck down and smothered, as were also two others who were further from the door. The head miller was afterwards found standing up with his face to the wall, at the western end of the building, his head thoroughly roasted. A man and his son were likewise buried in the ruins, but they escaped through a window at the north side of the mill.

The utmost exertions were made, amidst great danger, to rescue the five bodies, and they were at length found to be William Stimson, aged 30, labourer; John Reynolds, aged 21, employed in the mill; John Frederick Lloyd, aged 22, butcher; William Mayfield, aged 28, waggoner, employed in the mill; and James Robinson, aged 30, foreman and engineer at the mill—the latter leaving destitute a wife and five small children.

The engines did not reach the spot until the whole of the mill and adjoining premises were nearly destroyed. The fire is supposed to have originated in a strap which revolved upon a number of cogs chafing against some of the wood-work, owing to the machinery getting slightly out of gear.

On the following afternoon an inquest was held on the bodies of the unfortunate sufferers, when the several witnesses described the circumstances above stated, and the jury returned a verdict of "Accidentally killed." The stock and machinery, belonging to Mr. Marriott, are stated to have been insured in the County Fire Office for £400—scarcely a third of the amount of the loss. Mr. Chambers, the owner of the mill, is believed to be insured.

A correspondent states, that, after the roof of the mill had fallen in, Butler, an apprentice, was seen on the end of a beam at the second-floor window, quietly taking off his shoes, with which he broke the glass, and so escaped. Butler, likewise, greatly exerted himself in rescuing persons from the ruins; as also did Gregory, of the Southwell fire-brigade, and Inspector Caldwell, of Newark.

TESTIMONIAL TO MR. C. P. RONEY.

A VERY graceful compliment was paid to this gentleman on Monday evening, by a party of nearly eighty of his friends, sixty of whom were

TESTIMONIAL PRESENTED TO MR. RONEY, ON MONDAY LAST.

connected with the metropolitan daily and weekly press, and had associated specially for the purpose. A *récherché* banquet, served by Mr. Bathe, of the London Tavern, in his best style, formed an agreeable introduction to the principal object of the meeting, which was for the presentation of a very handsome silver Flower Vase and Salver, of exquisite workmanship, and got up with that fine taste which characterises all the productions of Messrs. Hunt and Roskell. This testimonial was an offering on the part of the members of the metropolitan press, in token of their appreciation of Mr. Roney's conduct in all his relations with them during his tenure of office as secretary of the Eastern Counties Railway. The Salver bore the following inscription:—

"Olim meminisse juvabit."

To Cosack P. Roney, Esq. (Late Secretary of the Eastern Counties Railway),
This Salver, with an accompanying Flower Vase,
Was presented at a dinner given to him at the London Tavern,
December 15, 1851,
By Gentlemen connected with the Metropolitan Press, and some private friends
In token of their high sense of the urbanity evinced by him on
all occasions in his public capacity, and of their sincere
regard for his private worth.

The whole proceedings were of a highly gratifying character, and the enjoyment of the evening was much enhanced by the able manner in which the festivities were presided over by Mr. Herbert Ingram.—*Morning Post.*

OPENING OF THE CORK AND BANDON RAILWAY.

IN our Journal for Sept. 27, 1845, we illustrated the commencement of this line of railway, by the Earl of Bandon formally cutting the first turf; and we have now much pleasure, by aid of our correspondent at Cork, in recording the opening of the line from end to end.

Few railways have had so hard a struggle for existence as this Bandon line; yet, notwithstanding the period of the famine, the total prostration of the speculative energies of the country, and the disagreements between the contractors and the company, the directors have every cause to congratulate themselves upon the way in which they have executed the arduous trust reposed in them, their whole aim and ambition having been from the commencement to encourage local industry, at the same time that they were laying a line of railway surpassed by few in the country.

The works were of no ordinary description, having to be made along the face of the highest range of hills in the district; thereby entailing the necessity of one continued series of cuttings, embankments, tunnels, and viaducts, the nature of which will be well understood from the accompanying Sketch of the Chetwood Viaduct, which rises from the level of the Bandon road, over which it passes, to within a few feet of the same elevation as the Great Tubular Bridge; and shows the masterly manner in which Mr. Nixon as engineer, and Messrs. Fox and Henderson as contractors, have executed their work. This vast structure, considered the largest of its kind in Ireland, measures 500 feet from abutment to abutment, and is about 100 feet above the level of the valley; it is divided into four spans of 100 feet each by two abutments and three massive outline stone piers, 70 feet high; the ornamental pilasters and bold projecting cornices giving the whole structure an appearance of great strength and solidity. The upper portion is composed of wrought and cast-iron, and weighs about 1000 tons. Each span consists of four cast-iron arched ribs, three feet in depth, 110 feet span, with a rise of 20 feet in the centre, and running right across from pier to pier. They are retained in their places by cast-iron braces and wrought-iron tie-rods, and connected on the top by the roadway formed of cast-iron covering plates, flanged and bolted together; the whole finished by a neatly-cast handrail and projecting cornice.

The works throughout the line are now in such a state of forwardness as to have elicited the warmest praise from the Government inspector, who went over the line on Wednesday fortnight, and declared it fit for public traffic.

On Saturday week the deferred excursion to the shareholders, the directors, and their friends took place; and, were the loudly-expressed opinions of those favoured with an invitation to be taken as a guarantee for the welfare of the company, little doubt can be left of its ultimate success. There are two classes of people to whom this railway must be a great boon: these are the widely-spread people of the western district of the country whose business or pleasure may lead them into the city, and the tourist who seeks to enjoy the beauties of the west: to the latter it opens up a new district of country; whilst it at once takes them from a road heretofore looked on as one of the most unattractive leading for some fifteen or sixteen miles out of the city.

The excursion was made in and out in capital style, and much to the enjoyment of those who partook of it. The journey outwards, owing to the directors' wish to allow their friends to see the country, occupied about three hours; but home the speed was at the rate of over forty miles per hour.

We have to express our thanks to Mr. Ronayne, one of the resident engineers, for his obliging attention to our Artist.

HAYMARKET THEATRE.

THE broad farce of "The Two Bonnycastles" maintains its well-merited success at this theatre. The incident selected by our Artist for illustration is as follows:—The sham *Bonnycastle* having arrived, and the servant being engaged in preparing his chamber, the real *Bonnycastle*, now domesticated in the lawyer's establishment, makes himself generally useful. He consents, in fact, to provide luncheon for the new comer. Returning to the stage with a well-filled tray, he is encountered by his wife, who has just arrived to advise with his master on the subject of his own mysterious disappearance. Their surprise is mutual. In his agitation, *Bonnycastle* drops the tray and its contents. This incident, of course, practical as it is, produces the most uproarious merriment on the part of the audience.

SCENE FROM THE NEW FARCE OF "THE TWO BONNYCASTLES," AT THE HAYMARKET THEATRE

MUSIC.

THE GLEE CLUB.

On all sides the reactionary movement in favour of glees and madrigals is apparent. The refined and improved style of executing music of this class by the accomplished members of the English Glee and Madrigal Union, at Willis's Room, is a season, has inspired a renewed zest for these charming composi-tions in which so much exquisite poetry and the best writers is to be found wedded to purely English musical composition. The first meeting of the ancient Glee Club was looked forward to, therefore, with interest, last Saturday night, at the Freemasons' Tavern. The oldest club of the kind are the Catch Club, instituted in 1762, and the venerable Madrigal Society, in 1741. From 1783 to 1787 Mr. Robert Smith invited amateurs and professors to his house in St. Paul's Church yard, who sang glees, catches, canons, motets, and madrigals; and his example was imitated by Dr. Bever, who had a valuable musical library, Mr. Hesseltine, and others. A club was organised by these lovers of art, the first meeting of which was at the Newcastle Coffee-house, on Saturday, December 22, 1787. Dr. Arnold, Dr. Dupuis, Mr. L. Atterbury, Mr. Thomas Linley, &c., were also members; amongst the honorary ones were Samuel Webbe and John Wall Calcott, the composers, Bartleman and Harrison, the singers. On the 10th of March, 1788, the society went to the Freemasons' Tavern, on the 10th of October, in the same year, the Crown and Anchor became head-quarters, whilst the Freemasons' building was under repair, returning there on the 30th of February, 1790. On the 4th of July, 1791, the society again migrated to the Crown and Anchor, and remained therein until the tavern was given up, and then went back to the Freemasons'. Dr. Dupuis was the first president, and Dr. Arnold the first president. S. Pepys, Esq., the actual president, succeeded the late Sir Felix Booth. Mr. Walmesley is the vice-president. Mr. James King entered upon his office of conductor on Saturday night, as the successor of the late Mr. Elliott. In the list of honorary members and perpetual will be found the names of Danby, Hindle, Sale, C. Knyvett, Bellamy, Leete, C. Dicnum, W. Linley, Spofforth, Braham, Vaughan, C Evans, C. Taylor, Hawes, Wesley, Terrail, T. Cooke, Pyne, Hobbs, Fitzwilliam, Hawkins, Bradbury, Collyer, Barnby, Phillips, Spencer, Moxley, &c.

It was for this club that Webbe composed the celebrated glee of "Glorious Apollo," and presented it on the 16th of January, 1790. Also "Now Bacchus Domus," and Dr. Cooke's "Amen," the first glee is, invariably, "Glorious Apollo." The selection comprised also Callcott's prize glee, "Go, idle boy!" "With sighs, sweet rose;" Horsley's "Down Amaryllis;" and "Ethereal race;" Dr. Cooke's "O Venus regina;" Mr. Walmesley's "The leaf that falls;" Sir Henry Bishop's famous drinking chorus, "Fill boys and drink," from the "Miller and his Men;" "Blest Apollo," "Come to my longing arms;" and C. Evans's prize glee, "Great Bacchus place me near the bowl." These compositions were sung by Messrs. E. Barnby, H. Barnby, Spencer, King, Brownsmith (the organist), Shoubridge, Fitzwilliam, Walmesley, and Foster. Two young amateurs, Messrs. Bacon and Mr. H. Barnby, Jun., made a good bid fair to achieve distinction. Mr. Barnby has a deep-toned bass voice, which he may turn to good account with care and study. Mr. Foster, the organist of Wells-street Chapel, has no ordinary share of taste, as his poetry, sentiment, feeling, and passion in his style, and his voice, a counter-tenor, is of such penetrating and sympathetic quality, that he imparts to the glees in which he participates the highest charm. Mr. Foster is no stranger to the public, and the usual routine of merely mechanical note singing; it is marked with a thorough appreciation of the poet's meaning as well as of the composer's intention. His expression on the words, "Down sorrow and sorrow shade by me," in the "Celia's arbour" and "dear happy hours, that can return no more," in the "With sighs, sweet rose," was quite thrilling.

Mr. Best, the pianist, organist, and composer, performed on the pianoforte his own brilliant "Valse de Bravure" with a nimble finger, and was much applauded. The president, in the course of the evening, paid a touching tribute to the memory of the late Mr. Elliott, and Mr. Walmesley, in a very fine glee was appropriately selected after the "memory" had been drunk in silence.

One curious custom at this club, after the loyal and routine toasts, is, that the healths proposed by the president are those of fair and popular vocalists: thus there were the names of Jenny Lind, Miss Dolby, Miss Clara Novello, and Miss Catherine Hayes, given from the chair, which were duly honoured. The club meets once a month, up to June.

MISS KATE HICKSON'S CONCERT.

Under the immediate patronage of Lord Dudley Coutts Stuart, M.P., an evening concert was given on Tuesday, at the Hanover-square Rooms, by Miss Kate Hickson, in aid of the funds of the Hungarian Committee and of the Literary Association of the Friends of Poland. There was a very full attendance. The following *artistes* gen rously gave their gratuitous services:—Mdlle. Conlon, M. Orose, and Mr. C. Salaman (conductor), pianists; M. Rémenyi, the Hungarian violinist; Signor Piatti, violoncellist; and Mr. R. Blagrove, concertinist: the vocalists were Miss Louisa Pyne, Miss Alsalin, Miss Poole, and Mrs. Weiss; Messrs Swift, Wrighton, and Henry Geoffregin. The last-mentioned singer was enthusiastically encored in the Magyar national song, "Press Der and Ehr Magyar." Miss Kate Hickson sang Meyerbeer's page song, "Nobil donna," from the "Huguenots," and Donizetti's brandisi, "I Segreto," the latter being redemanded.

MISS DOLBY'S SOIREES MUSICALES.

The third and last programme was as usual very interesting as to selection and excellent in the execution. Miss Dolby introduced a new ballad, Charles Gounod's beautiful songs of France: the first was a lover's plaint, "O my proud one!" and the second a hunting song, "The haughty steeds are neighing"—both compositions replete with fine feeling, spirit, and originality. Miss Cecily Nott, who has been attracting notice at Jullien's concerts, and who is engaged by him for a tour in the provinces, gave Mozart's "Batti, batti," with Lucca's violoncello obligato. Miss Nott is a pupil of Manuel Garcia, and bids fair to be an honour to that great singing master, about whom Jenny Lind and his sister Viardot have received such valuable lessons. Miss Louisa Pyne sang Mozart's "Non paventar," from "Zaide," and Balfe's "Come into the garden, Maud." On reading of Holmes's clever cantata, "The blind flower girl," was another great treat. Mr. Whitworth rendered Stradella's air, "Prieta, Signor," with artistic sentiment. Mr. Lindsay Sloper, Mr. Lucas, and Mr. Lucas ably performed Mendelssohn's pianoforte trio in D minor. Mrs. John Macfarren and Mr. Holmes played a posthumous "Duo à quatre mains," by Mendelssohn, and Lindsay Sloper executed Dussek's sonata in G, Op. 25, very cleverly. Mr. Blagrove's fine tone in De Beriot's violin fantasia on the "Elsir d'Amore" thrones was much admired by the numerous auditory.

MUSICAL EVENTS.

Last night, the 19th inst., the Chelsea Sacred Harmonic Society (instituted 1847) performed Handel's "Messiah," under the direction of Mr. Holderness. Mr. E. J. Rowley being the leader of the band. The chief vocalists were Mrs. A. Newton (soprano), Miss C. Fenn (contralto), Mr. J. Melling (tenor), and Mr. Leffler (bass). The band and chorus numbered nearly 100 performers. The exertions of the members of this society, which meets at the Commercial Hall, Kings-road, to cultivate the taste for music in this new crowded neighborhood, deserve every encouragement. It is but recently that Haydn's "Creation" was given very creditably.

The ninth of the *Réunions des Arts* took place at the Queen Anne-street Rooms on Wednesday, under the direction of Messrs. Lucas and Herr Golnick. The meetings will be recommenced on the 7th of January.

At Mr. Charles Salaman's Amateur Choral Society, on Wednesday night, Mozart's "Requiem" and Mendelssohn's "Lobgesang" were performed.

Amongst the novelties for next season it is announced that Mr. Lumley intends to produce the Duke of Saxe-Coburg's opera, "Casilda," now going the round of Germany with decided success. His Royal Highness has generously granted his rights of authorship to M. Lumley, the leader of the band.

The Emperor of Russia has presented Formès, the bass, with a magnificent diamond ring, worth £120.

The first of a series of three subscription concerts in aid of the building fund of the Marylebone Literary and Scientific Institution was given on Thursday, under the direction of Mr. W. Macfarren. The *artistes* engaged are Miss Birch, Sawaniq, Dolby, Kate Hickson, M. Williams, Mrs. Endersohn; Messrs Weiss, Lockey, Lazarus, Harrison, T. Williams, Lawler, Phillips, Land, Richardson, Lazarus, and G. and J. Case.

Mr. George Buckland delivered the last of a series of lectures on music at the Poplar Lecture Hall, last Monday, illustrated by works of our most popular composers.

The anniversary of the Manchester Madrigal Society was celebrated on Tuesday by a performance of the works of the old masters. Mr. Charles Hallé, the pianist, and Mr. Seymour, the violinist, gave classical chamber concerts in the same town. The English Glee and Madrigal Union, Mrs. Endersohn, Miss Williams, Messrs. Lockey, Land, Francis, and Phillips, have visited this week Croydon, Leicester, Derby, Nottingham, and Sheffield. Miss Rebecca Isaacs, Messrs. Allen and Whitworth, have been playing an English opera at Manchester, and Mr. and Mrs Sims Reeves, Messrs. Delavanti, Stretton, with Mr. Frank Mori as conductor, at Glasgow.

A committee has been formed to organise a concert on behalf of the veteran composer, Mr Blewitt, who is now suffering from long and severe illness. The concert will be given in the Hanover-square Rooms. Messrs. Macfarren, Lindsay Sloper, Beale, Neate, Addison, Chappell, and other well-known professors and pub lishers, are members of the committee.

The never-failing attraction of Handel's immortal "Messiah" is amply proved by its performance three times near week; viz., on Monday at Exeter Hall, under Mr. Surman's direction, by the London Sacred Harmonic Society, with Mrs. Sunderland, Mrs. Temple, Miss Dolby, Messrs. Lockey and Phillips, as chief vocalists; on Tuesday at the Crystal Palace, Costa's direction, by the Sacred Harmonic Society, with Misses Birch, Dolby, Messrs Lockey and Phillips; and by the Cecilian Society, at the Albion Hall, on Wednesday.

Herr Pauer, the pianist, organist, and composer, will commence a series of concerts at Willis's Rooms next Friday, to introduce his new instrument.

The advices as to the state of the Parisian opera-houses are very desponding. Gusson, the new tenor, pleases in *Ernani* but does not startle his hearers, and Madame Tedesco was studying *Fidès* in the "Prophète." Madame Viardot is in Paris, but will not sing in public until she returns to London next season. The *débuts* of Ferotte, a baryton of repute, and of Madame Frazolini, at the Italian Opera, were to be the next novelties.

Miss Kansford gave her third *soirée musicale* on Tuesday, at her residence in Welbeck-street. Sir Henry Bishop's beautiful glees, "Sleep, gentle lady," and "When would a morta!," were sung by Miss Ransford; her brother, Mr. W. E. Ransford (tenor), and her father, Mr. Ransford (bass). An adaptation of Bellini's "Qual cor tradisti," from "Norma," called "Sunset," and Wallace's trio, "Turn on, old Time," were sung by the same singers. Miss Ransford sang a new ballad by C. W. Glover, "Little Gipsy Jane," and a German song, by Suppe, "To the lark," with Mr. R. S. Pratten's flute obligato. Miss Ursula Barclay sang Mozart's "Voi che sapete," and Walter Maynard's ballad, "I strive to forget thee, Ellen," very nicely. Mr. Brinley Richards was the conductor, and performed his own clever compositions, "The Vision," and the scherzo, "The Birds and the Rivulet." Mr. Harrison sang Mr. Richards's ballad, "Oh! say not what thou feelest," and Mr. Ransford, Shield's "Wolf."

The English opera season, which has been long and prosperous, terminates at the Surrey Theatre this evening.

The widow of Weber has offered to the Queen of England the MS. score of "Oberon," as that opera was first presented in this country. The King of Saxony has the original score of "Euryanthe," and the King of Prussia that of "Der Freyschütz." The Emperor of Austria kindly gave these MS. scores out of the Imperial Library, at the request of Weber's widow, that they might be presented to the Sovereigns of the countries in which the operas were first performed.

THE THEATRES.

LYCEUM.—This theatre reopened on Monday, with "The Game of Speculation."

DRURY-LANE.—Mrs. Theodore Martin, under her maiden name of Miss Helen Faucit, is among the engagements made by Mr. Bunn. The part of *Bianca*, it is at length settled, will be the one in which Miss Glyn will make her first appearance, which is to take place on the 26th. Preparations are also making for "Aminy and Rosabel."

RICHMOND.—On next Monday and Tuesday the *élite* of the Sadler's Wells company will perform at this pleasant little theatre. Otway's fine tragedy of "Venice Preserved" will be performed, in which Mr. Marston will enact *Pierre*, and Miss Edith Heraud *Belvidera*.

THE WESTMINSTER PLAY.—On Monday night the great event of the year in Westminster School came off by the performance of the "Eunuchus" of Terence. The characters were distributed as follows:—*Phædria*, Mr. G. du L. Lacy, *Parmeno*, Mr. G B. Macilwain; *Thais*, Mr. F. H. Dodgson; *Gnatho*, Mr. S. Joyce; *Chærea*, Mr. W. G. Armistead (captain of the school); *Pythias*, Mr. L. W. F. Twiss; *Dorias*, Mr. T. Wm. Peel; *Davus*, Mr. H. Lloyd; *Sangarino*, Mr. C. W. Fendall; *Sanga*, Mr. A. F. A. Slade; *Sophrona*, Mr. H. F. R. Hewitt; *Laches*, Mr. E. Somerville. Mutæ Personæ: *Pamphila*, Mr. E. Kennard; *Antiphila*, Mr. A. G. Edwards; *Menedemus*, Mr. H. Salaey; *Syriscus*, Mr. A. J. Onslow; *Ancilla Ethiops*, Mr. R. T. Waters; *Ancilla*, Mr. H. J. Harrison. The acting was in the usual style of excellence manifested by the "Westminster Boys," although the play does not afford as many salient points as the "Andria," which was the play of the preceding year. The *Gnatho* of Mr. Joyce was a rich and unctuous personation, and the *Chærea* of Mr. Armistead had all the order and vehemence required in the delineation of that character. The *Pythias* of Mr. Twiss excited much laughter, and the whole performance amply merited the *plaudite* with which the play concludes.

PANORAMA OF NIMROUD.—We were admitted on Thursday to a private view of Mr. Burford's new panorama, which, from its classical and sacred associations, will, no doubt, prove highly attractive. The drawings from which it has been painted were taken by C. F. Barker, Esq., and the execution, as usual with all Mr. Burford's pictures, is admirable. The subject is the Tel, or Mound of Nimroud, and the various points are sketched with a fidelity which strikes every spectator who has read Layard and the other authorities on the history of Nineveh, and the discoveries so recently made. The panorama has been taken from an elevation from which the whole of the mound and every excavation on its surface are distinctly traceable. Space prevents us from detailing the various points at present, but we shall probably return to the topic.

THEATRE ROYAL, DRURY-LANE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

My attention having been directed to a statement in your last publication, to the effect that the construction of rentres to facilitate the redecoration of this theatre, I shall be greatly obliged to you if you will prove it to be true.

I have the honour to be, &c.,

December 17, 1851. A. BUNN.

COAST OF AFRICA.—A letter received from an officer on board her Majesty's brig *Spy*, dated Sierra Leone, Nov. 6, says—"The slave trade is very far from being extinct; they now appear to be sending over from Rio the frames of the slave-vessels to be put together in the river, by which plan the escape is greatly facilitated. Whilst off this place, on the 3d of this month, we received intelligence that two large canoes which were then in sight, contained slaves. It being calm, our whale-boat, with 16 men and two officers (Messrs. Baynton and Michell), were started in pursuit, and after a most animated and exciting chase we captured them both, containing 56 slaves, and manned with 19 Mandingo men. I and two more well armed took possession of the first, and Baynton and Michell,

Catalogues with full particulars forwarded for a post-age stamp.—London: published by B WILLIAMS, 11, Paternoster-row.

NOVELLO'S CHEAP MUSIC.—The general complaint that "printed music is too dear" was so well founded a few years ago, that the number of persons who could afford to purchase it was comparatively very small. The same remark has applied to popular music at the present moment, although the prices have reduced from a shilling to sixpence, certain Musicsellers are still enabled to charge a shilling for a single song, and from two shillings to three shillings and sixpence for a Quadrille, with their accustomed profit; presuming that as everybody must have music, and as there is no other source from which it can be obtained, they will be enabled to charge what prices they please. This system of extortion is now at an end, and the Publishers of NOVELLO'S CHEAP MUSIC are determined to supply the public with music of a higher price, and sometimes even by altering the Prices printed on my publications.

THE PUBLIC, FOR THEIR OWN PROTECTION, Should therefore—

1st.—Insist on having "NOVELLO'S Editions," which are always by print, and can be obtained by every respectable Musicseller or Bookseller in town and country.

2nd.—Compare the price they pay with the Catalogue prices.

3rd.—If other methods fail, address their orders direct to The Public's obedient Servant, J. ALFRED NOVELLO, 69, Dean-street, Soho, and 24, Poultry, London.

Catalogues sent postage free for six postage stamps.

PIANOFORTES.

PIANOFORTES.—CRAMER, BEALE, and Co have a large assortment of New and Second-hand Pianofortes, for SALE or HIRE, in all woods, at their Wholesale and Retail Establishment, 201, Regent-street, and 67, Conduit-street.

Patterns sent post free to any part. Address to WILLIAM SHEATH, 283, Regent-street, London.

HUBBUCK'S PATENT WHITE ZINC PAINT.—Being elegant white, the favourite colour of the sea-sons, has been used by artists through successive generations, and is still known to the numerous visitors to the Royal Academy under the old name of Permanent White

Three years since the proprietors placed their manufactures on a large scale, and offered it at a price to compete with White Lead.

Its confessed superiority over every other paint hitherto known brought them into extensive demand.

These inferior productions are frequently made from zinc ores, con-taining lead, arsenic, and other deleterious material, alike injurious to health, deficient in body, and reducing the preservative properties for which zinc is employed to the manufacturer.

In justice to the proprietors these should not be confounded with the original article, manufactured under the pressure that it is all the same

HUBBUCK'S paint is entirely free from any deleterious properties whatever; it is healthful in the manufacture, healthful in use, and healthful to occupants of rooms newly painted with it.

As a proof of this, the Medical Superintendent of the Infirmor of Asylum has used it entirely

[illegible] PATENT,

and if the cash has not been so marked, the reason is obvious.

Being the first to introduce this valuable paint, made fast for

THOMAS HUBBUCK and SON, Colour Manufacturers, opposite the London Docks.

S. and J. W. BENSON, Goldsmiths and Watchmakers, 16 and 63, Cornhill, London WATCHES.—Messrs. B. S. and J. W. BENSON call public attention to their Stock in Trade of Gold and Silver Watches, the manufacture of a true timekeeper at the lowest possible price for which purpose they have so long devoted their attention. No. 16, Cornhill, as to enable them thoroughly to carry out the entire superintendence of the manufac-turing of their Watches, which, from its importance, they consider worthy attention, and thus the opportunity is afforded to inspect each part of the Watch in its progress to completion, the purchaser having the in-dermediate profits arranged by the manufacturer with the shopkeeper.

BENSON'S £4 the GOLD WATCHES: the same Movements in Silver Cases £3 15s.—A large and beautiful Stock can be selected from, with highly-finished movements, four holes jewelled, rich gold dials, and every requisite for time. A Gold Watch, with all the fat in-ex-provements, i.e. gold dial, jewels in four holes, maintaining power, chronometer balance, and the very best gold chain, fitted complete in a rose-case adapted for a Present, price Seven Guineas.

Benson's Bright Gold Hunting and Detached Gold Lever Watches.—These Watches are made flat, with skeleton movements, jewelled in ten holes, gold or enamelled dials, in beautiful engraved and en-gine-turned Hunting cases.

BENSON'S PATENT DETACHED GOLD LEVER WATCHES.

The construction of these watches aids rivalry, either of the trade manufacturers or any other house, for the same advertised price. Prices of foreign watches, with the new pre-ventive Order, payable to JOHN JONES, for £4 5s., one will be sent free. Jones's Steam Factory, 338, Strand.

ELEGANT GOLD WATCHES, Jewelled in Four Holes, maintaining power, richly engraved cases and dials, from £5 10s. Silver Watches, with movements equal to the above, £3 3s. Every Watch skilfully timed and warranted. A new and curious guarantee given with each Watch. HAWLEY'S, 284, High Holborn. Three doors from Broad-street. Barometers, Thermometers, and Watchmaker of the Name in London. Gold, Plate, Diamonds, and Watches bought, or taken in exchange. Established upwards of half a century.

THE PERFECT SUBSTITUTE for SILVER. —The real NICKEL SILVER, introduced 15 years ago by WIL-LIAM S. BURTON, when placed by the patent process of Messrs. Elkington and Co., is beyond all question the most perfect metal next to sterling silver that can be employed as such either sanitarily or ornamentally, as by no possible test can it be distinguished from real silver.

William S. Burton has completed some extensive alterations in his premises, by which he has in fact the largest Show-room (all communi-cating, exclusive of the shop, devoted solely to the show of General Fur-nishing Ironmongery in existence, extending over Nos. 1, 2, and 3, Newman-street, and 4 and 5, Perry's-place. Established A.D. 1820

THE STRAND! the METROPOLIS! and the UNITED KINGDOM!—The spacious PREMISES, No 430, Strand, (next door to the Lowther Arcade, Pyne-street Entrance joining), are NOW OPENED in the TEA TRADE by THOMAS HETHERINGTON, Tea Merchant, from the Manufactory, Mincing-lane, the more commodious premises as above. The stock will be entirely new, and selected with care (during the present favourable season very depressed state of the market), with the advantage of ample means of mastered judgment, the result of upwards of 30 years' practical ex-perience in the trade, combined with the great leading feature to be recognised in this new and vast undertaking will be to identify the interest of the Retailer with that of the Public, by the assurance that no stock is be regualled by few, and not to be surpassed in quality and strength, and that the Public may be sure of getting their Tea at the first cost of production. Carriage paid on 42 worth and upwards to all parts of the Kingdom, and all orders punctually delivered by our own carts (4 in).—Future address, 430, WEST STRAND, and 1, 2, and 3, King William-street, Strand.

FOG, COLD, and NIGHT AIR.—COOK and WILLIAM'S RESPIRATORY ORGAN and CHEST PRO-TECTOR completely supersede the old Mouth Respirator and form the best and safest guard for the throat, lungs, and chest. They have had the honour to be patronised by the Royal Family, and are now in general use throughout the United Kingdom.

"Cheap, elegant, and effective."—Lancet, Nov. 29, 1851.

"Much required."—Morning Post.

"Simple and efficacious."—James Bright, M.D.

Ladies' Cachenez, 9s 6d; Gentlemen's, 10s 6d. Also lower qualities

FREEDOM from COUGH in TEN MINUTES and PERFECT SECURITY from RELAPSE.—Prepared by James Macarthy, Medical Hall, 4, Essex-bridge, Dublin.—"I can bear tes-timony to the efficacy of Dr. Locock's Wafers, which act as a specific in affections of the lungs, viz: influenza, colds, asthma, irritation, cough, &c. I have met many elderly persons who could not leave home of a damp or foggy day they had taken cold, and were obliged to have recourse to a steam inhaler. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all Druggists. Agents wanted in all unrepresented towns.

REV. J. LANE, Saltash Parsonage, Plymouth and many others, lately cured with the delicious and reasonable ALE, brewed with the water from "Harry Hill's Wonder." By tradition H Hill was wonderfully cured, in the 16th century, by the use of "Ergo inhabitantibus Sanitas, mox cessat vi splendebit rosea pictis colore gena."—Sold by HOLDEN, 61, Great Russell-street, Bloomsbury-square, Sole London Agent.—October brewings are now in fine order.

H Wells, Manager, Shepherd's Tavern.—One Agent appointed to a town.

TREASURES of NATURE.—It has been well said that there is not a flaw or imperfection that flesh is heir to for which a remedy is not at hand, to discover which we have only to search the vast laboratory of nature. A mere apt illustration can scarcely be offered than in the application of a natural production, of American growth, namely, the Balm of Columbia, in cases where the human head has been deprived of its becoming and natural orna-ment. As a promoter of growth, strengthener, and restorer of the hair COLDING'S BALM of COLUMBIA is unrivalled, and in cases of baldness its virtues are inestimable. 3s 6d, 6s, and 11s per bottle; no other price. Ask for Colding's Balm, and never be persuaded to use any other article as a substitute.—13, Wellington-street North, seven doors north of the Strand.

DISSOLVING VIEWS.—Amusement and Instruction by means of CARPENTER and WESTLEY'S im-proved PHANTASMAGORIA, LANTERNS with the Chromatrope and Dissolving Views, and every possible variety of Sliders, viz. including Natural History, Moveable and Plain, Astronomical, Views in the Holy Land, Scriptural, Portraits, &c. No 1 Lantern, with Fixed Lamp, in a box, £2 12s 6d; No 2 Ditto, of a larger size, £4 14s 6d. A pair of Dissolving View Lantern, No 3, with Apparatus, &c. The Lamp for the No 3 Lanterns is very superior. (The price of the Lan-terns is without Sliders.) The greatest assortment of Sliders in Lon-don for selection from.

Lists of the Sliders and prices upon application to the Manufac-turers, Messrs CARPENTER and WESTLEY, Opticians, 24, Regent-street, Waterloo-place, London.

BEST WALLSEND COALS.—The INCE HALL COAL and CANNEL COMPANY are now delivering in London, and at all the Stations of the North-Western Railway Company, the above superior House Coals, at very reduced prices; also Cannel, in lumps, for Drawing-room use. Orders addressed to the Company's Agents.—Messrs LEE and JERDEIN, 11, Upper Ground-street, Blackfriars, London; Mr. WILSON CARTER, Dudding-stone-row, Birmingham, for the stations between Stafford and Harrow; Messrs. YOUNG and SPENCER, for Shrewsbury District; or to the Company, at their head office, 7, Romford-street, Liverpool, will meet with prompt attention. Steam, Silkstone, Cannel, and other Coals supplied to order.

HAIR MEMENTOS.—ARTIST in HAIR.—MR. NEWBERY sends to Ladies resident in any part of the King-dom a BOOK of SPECIMENS for two postage stamps. He also beau-tifully BRAIDS, and elegantly mounts in fine gold, Hair Bracelets, Brooches, Rings, Chains, &c. at charges the most moderate.—NEWBE-NET, 179, Fenchurch-street, London.

IMPAIRED SIGHT.—As the prevalence of impaired sight is to be traced to the immediate use and abuse of spectacles, as well as the natural changes produced in the eye by age, Messrs. HORNE, THORNTHWAITE, and WOOD have much pleasure in stating that the OPTOMETER they employ, invented by Mr. ALLEN, Surgeon to the Centre Ophthalmic Hospital, in Lon-don, enables them correctly to ascertain the state of the vision of the eye, and the required optical remedy for its defects.—MORNE, THORNTHWAITE, and WOOD, Opticians, 123, Newgate-street, London.

BONNETS, PARISIAN MILLINERY DE-SIGNS.—Each parcel contains 12 plates, with the materials and directions for the production of the most elegant and recherché Bonnets, One Guinea each, in all colours; French satin, dosage, crape, felt, and straw Bon-nets; also Caps, Hats, and the fashion, price 5s. 6d. or one shilling each. Also the largest stock in London to select from. For Cash only. At Cranbourne House, 39, Cranbourne-street, Leicester-square, London. Proprietors, E. WOOKEY and COMPANY

BABY LINEN and CHILDREN'S DRESS. —Infants' Embroidered Robes, long and of short, from 8s to £5 10s Cashmere Cloaks, from 10s 6d to £3 3s. The French Merino Cloak, lined with silk, and handsomely braided, 21s 6d; Muslin ditto, from 7s 6d; French Cambric Hoods, all the prevailing styles, from 10s; French Cambric Caps, from 3s to 40s; ditto, trimmed, from 6s 6d. Monthly Nurses, Outfits, Layettes, from 2l 15s to 15l; Baby Baskets, 1s to 3s 6d. Superior cut Drawers and Pinafores, from 1s 6d. Children's Suits of white and coloured Frocks and Pelisses, from 6s 6d. All the novelties in Children's Vestes, Paletots, Jackets, Bonnets, Hats, &c. Silk or Satin Mantles and Visites, from 6s 6d. Merino Jackets and Paletots, from 8s 6d. Velvet ditto, 16s 6d. Velvet Cloaks, Baby Baskets, 10s 6d; Sashiatoes, 20s 6d; Bedding, extra. Baby Linen, Robes, Clothes, &c. sent into the country on sending the approximate, or receiving a remittance or town reference. Lists forwarded, post paid Ladies' Wedding, Sitting-up, and Bridesmaids, in the greatest possible variety, and very reasonable prices.—NUNN'S, 259, Regent-street, 2 doors north of Oxford-street.

DRESS SHIRTS, for Evening Parties, &c., at 7s 6d, 10s 6d, and 12s 6d each. A variety of the newest patterns kept ready for immediate use. Long cloth shirts, 8is for 31s 6d, 37s 6d, and 42s.—R. HIND, 363, Oxford-street, four doors east of the Pantheon, and directly opposite the Princess's Theatre.

ROGERS'S IMPROVED SHIRTS.—Six 6d and 8s 6d and 37s 6d the Half Dozen; combining the highest de-gree of comfort and fit with economy. Satisfaction in 24 can be ex-changed, or the money returned.

Printed price lists, with full particulars, directions for self-mea-surement and, if required, patterns of the new Coloured Shirts, at 30s, 36s, and 42s the half dozen, forwarded by post to all parts of the Kingdom.

ROGERS and CO., Improved Shirt Makers, 50, ST. MARTIN'S-LANE, Charing-cross, London. Established Sixty Years. Boys' Shirts in all sizes.

1000 SUPERIOR WINTER OVERCOATS, in every variety of Style and Quality, at prices consid-erably less than at any other establishment in London are kept on hand (or to measure) at F. BURAT and CO'S, 29, Regent-street, where each has its price attached in plain figures.—Also their celebrated Mixed-ravelled Waterproof Coats, as shown in the Exhibition

NICOLL'S REGISTERED PALETOT is the favourite Winter Dress, 114, 116, 118, and 120, REGENT-STREET, and 22, CORNHILL, for winter wear, at the moderate price of 5 Guineas. Three Guineas each; thus it deservedly bears the name of being not only the most elegant, but the most economical Dress. In this new garment ever offered to the public, the intricate value of Nicolinen Cloth being, within the last few months, much reduced in price.

A NEW INVENTION, whereby much improvement in the prepara-tion of Winter Trousers, at very moderate prices, has been lately effected; such is at once ready for immediate inspection.

It is impossible to detail in an ordinary advertisement the many ad-vantages which the Public have made known to them at the Establishments of the Messrs NICOLL'S system of business. One fact will alone suffice—

Messrs NICOLL are, in many instances, purchasers of the raw ma-terial, which enables them to have made up in their own Establishments, by the same workmen for them in the West of England, so that in all kinds of garments, whether Coats, Trousers, or Vests, any intermediate profit does not exist between the producer and the consumer.

The Warehouses in London are 114, 116, 118, and 120, REGENT-STREET, and 22, CORNHILL.

WINTER TOP COATS, and every novelty in Gentlemen's Clothing, as exhibited in the Great Exhibi-tion, with the Registered Arrangement of SASHES, for the Public, at merchant tailors, outfitters, and woollen drapers, 29, Longacre-hill (one door from the Old Bailey).

This establishment is famed throughout the world for the equitable principles on which this well-known emporium of fashion has been for years conducted. With confidence, therefore, it presumes, that no gen-tlemen who have not given them a trial, to do so, feeling as-sured it will be the means not only of gaining their patronage, but also recommendation.

Fashionable Trimmings, cheaper of charging separately for material and making is continued as heretofore.

Purchasers of WIN

PRESENTS FOR CHILDREN.

Just out, Two choice Books for Children, uniform with "Peep of Day" and "Line upon Line," prettily Illustrated with Engravings, attractive cloth, ornamental leather, 2s 6d each.

EARLY DEW upon the TENDER PLANT, or, Easy Scripture Lessons for Young Children. With Questions and Answers upon each Lesson.

SOFT SHOWERS upon the OPENING BUD; or, Easy Scripture Lessons for the Young. With Questions and Answers.

The above two books form a harmonised Gospel history in the very words of Scripture. All the con words are divided into sy-llables, to make them easier for the young, and at the end of each lesson is a short comment or explanation, with moral instruction. Questions and answers are also appended to the lessons.

The type is new, large, and distinct, the printing excellent, and the paper good. The books are appropriately illustrated. They are also attractively bound in best cloth, so as to form elegant little presents, and are remarkably economical. Price only 2s 6d each.

The books are so bound and arranged as to allow equally well of their being sold together or separately.

London: WHITTAKER and Co: and Nisbet and Co.

GIFT BOOKS for CHRISTMAS and NEW YEAR. By COUSIN KATE, AUTHOR OF "MARGARET CECIL."

The following volumes of the Series have already been published, price 2s 6d each, handsomely bound, and copiously illustrated with Wood Engravings by the most eminent Artists:

THE MORMONS: a Contemporary History.

"One of the most painfully interesting volumes that ever issued from the press."—Sunday Times.

THE BOOK of ENGLISH SONGS.

"The Book of English Songs is a most satisfactory volume in a literary sense, and, the words and the music in its pages considered, one that we have in anything like the compass in our language."—Athenæum.

THE ORBS of HEAVEN; or, the Planetary and Stellar Worlds. By D. MITCHELL, M.A.

"Unusually full of matter, and the eloquence Like other works of the kind, Mr Mitchell's book is likely to have an extended popularity."—Examiner.

PICTURES of TRAVEL in the SOUTH of FRANCE. Translated from the French of ALEXANDRE DUMAS.

"The great charm of these impressions, however, is their off-hand clevverness, and the lively ease with which the story flows."—Atlas.

HUC'S TRAVELS in TARTARY, THIBET, and CHINA. Vol I (to be completed in two volumes), illustrated with numerous Engravings, and a Map of Tartary, &c. By M. HUC.

"M. Huc is a most agreeable narrator. We could fill columns with amusing extracts, but it is best to send our readers to the book itself."—Daily News. "The National Illustrated Library, of which Huc's Travels in Tartary is the earliest, is without a rival in the beauty of its engravings and the extreme lowness of its price. The present work was published by Mr. Newby, in 3 vols, and it is now translated for the benefit of the English public, by whom we hope that it will be generally read."—York Herald.

A WOMAN'S JOURNEY ROUND the WORLD, translated from the German of Mme PFEIFFER. In 1 vol, price 2s 6d, containing Illustrated Engravings.

One	"	finest old Port.
One	"	Guinness's Stout.

Delivered free within five miles of their Establishment.

CHRISTMAS PRESENTS.—The most novel as well as most suitable present one can send to his friends at this season of the year is a hamper of MINCE and CAULK'S PATENT HOUSEHOLD PROVISIONS, £1, £2, and £3 each. They contain a choice assortment of Sauces, Entrées, Made Dishes, Preserves, &c., in high perfection, and ready for use at any time. To be had of the principal Oil and Italian Warehousemen, Grocers, &c., and of RITCHIE and M'CALL, 157, Houndsditch, London. Orders by post, accompanied by a remittance, promptly attended to.

CHRISTMAS SOAP for CHRISTMAS Day.—ALEXANDER the TARTAR and CASTOR OIL SOAPS are now beyond a doubt the most valuable Toilet Soaps for their healthful and purifying properties; the beautiful whiteness imparted to the skin by their use can only be accounted for by the combination and purity of their ingredients. Grace's Cleansing Soap is proved to be the best for the hair, and for all the household purposes; it preserves and makes linen white. 14 lb for 6s 6d, delivered free in London; and to the suburbs or any railway station in England at 8s per cwt, by Messrs. BOUGHTON and HAYWARD, 17, Billiter-street, London. Sample Boxes of Toilet Soaps from 6d to 2s 6d per box.

A MERRY CHRISTMAS to YOU.— A Memento of this happy period of the year is ready for delivery by Messrs SAMUEL ALCOCK and Co, China and Earthenware Manufacturers, Hanley, Staffordshire, and Portland-street, Soho, London, after a design by Alfred Crowquill, who has, in this effort so associate some of the characteristic customs of the present season, succeeded in producing one of the most useful and artistic souvenirs ever manufactured, a specimen of which is to be seen at the Manufactory, properly adapted, from its chaste and elegant appearance. Forwarded in a box, on receipt of a Post-office order for 11s 6d.

CHRISTMAS PRESENT from FUTVOYE'S. —Ladies' and Gentlemen's Dressing-cases from 4 to £40; solid silver top bottles, £3 3s to £20; Work-boxes from 1s 6d to £40; Desks, 4s 6d to £15; also a large variety of other cabinet and Berlin Goods, Papier Maché consisting of Tables, Tea-trays, Screens Cabinets, Writing desks, &c., for sale wholesale by Solid Gold Chains for weights in sovereigns, commencing 18s to £20; Silver Pencil-cases from 1s 6d to £3; Watches, Clocks, and Jewellery from 4s 6d to £100. Rings from 4s 6d to £20 Jet ornaments in endless variety. Card-cases, Fruit-knives, Tablets of every description—a large assortment of China, Glass, and Ormolu Goods, at the New Reading Rooms, the most interesting amusement yet produced: also Bagatelle, Tivoli, and other amusement Games. FUTVOYE'S, 154, Regent-street, corner of Beak-street. Manufactory, Islington.

CHRISTMAS.—The present season is hallowed by one of the most delightful offices of friendship and affection—the interchange of gifts. The choice of articles presented on such an occasion is a matter of no small importance, as well as the mode in which they are conveyed to the recipient. Whether the gift be rich or only of a trifling value, it should be presented in a manner calculated to preserve a grateful recollection of the donor. Beware of spurious imitations of the genuine beware how you purchase of "Rowland's," preceding that of the article on the wrapper or label, with their signature at the foot, to red ink, thus—"A. Rowland and Sons." Sold by them at 20, Hatton-garden, and by Chemists and Perfumers.

MECHI'S PREPARATIONS for CHRISTMAS and NEW YEAR'S PRESENTS.—Sensible that the Season's appropriate Love and Friendship gives their tangible tendrils, Mechi has taken care to provide an abundance of objects for testifying those sentiments. Besides good taste displayed in everything, of the most inexpensive, as well as the most costly sorts, are to be found at his repository of up-lists and elegancies, 4, Leadenhall-street, near the East India House. England has always been renowned for its hearty Christmas liberality, while Leadenhall-street has been celebrated for its Christmas feasts; and by Chemists and Perfumers.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

CHRISTMAS, 1851.

CHRISTMAS LOVE SPORTS.

ILLUSTRATED BY G. THOMAS.

HAD we the muse of Herrick, this subject, so delightfully depicted by our Artist, might be fitly described by us. He would have related how, while binding a garland, he found Cupid among the roses, took him and put him in his goblet, and drank him up with the wine. He would also have descanted on the Parliament of said Roses, and celebrated his mistress's riband as "the zonulet of Love." Ditties, anacreontic and bacchanalian, would we pen numberless, could we indite, like Herrick, a hymn to Venus or to Bacchus, a lyric to Mirth, or a canticle to Apollo. "Nobly wild, not mad," we would ask for our wine in crystal, and

Thus and thus
Would see't in's *puris naturalibus;*

and so wisely love that one kiss should ensure incorruption and immortality. As was his to him, our Julia should be to us the "*Flaminica Dialis*, or Queen Priest;" and hers the chaplet, the inarculum, the white vestures, in which

To appease
Love for our very many trespasses.

These and a thousand pretty fancies, noble and chaste, should make our columns breath balm, myrrh, and nard; for we should express "all things sweetly and in comely wise," and tell how roses became red, violets blue, and lilies white; how Oberon had erected a faëry temple or chapel, built "without lime, or wood, or stone;" how, too, he gave a wondrous feast; and how, finally, he was taken half-tipsy to his bed, in the midst of his cavernous palace, so curiously edified and decorated.

TWO NUMBERS, ONE SHILLING. WITH HALF-SHEET SUPPLEMENT, AND MUSICAL SUPPLEMENT, GRATIS.

Then, condescending (as the Scotch phrase it) to the humanities, we should scorn not to treat of charms and ceremonies; but to those of Christmas do especial honour in mellifluous psaltries, attuned to the praise of the wassail bowl and the yule-log, while the strong beer was drinking, and the white bread was cutting, and the meat was a shredding, and

> The rare mince-pie,
> And the plums stood by,
> To fill the paste was a kneading.

But, whatever may be our loss in the want of such a patroness, this cheerful season of the year forbids us to droop with the muse of the old poet over the mausoleum of the past; and bids us with hope and confidence to turn to our own, where she stands wooing us with eyes and hands to trust in that perpetual inspiration which in each human soul is as a fountain ever replenished. We willingly obey the summons—to "rejoice in the bride of our youth, and drink water out of our own cistern." Encouraged, moreover, by the suggestions of a sister art, it were strange if the creative spirit were not quick to respond to so fair a prompting, and readily to exert its productive powers under the influence of a kindred sympathy.

Poetic may learn much from pictorial art. What to that is one, to this is many. Cupids are multiplied at will by the painter; the boy-god, like the Hindoo Kehama, divides his personalities, occupies all places at once, and fulfils every duty. Like the polyphonist, "Love" presents himself to us "in an omneity of shapes," and in a variety of occupations; and, indeed, from of old he boasted at least a duality, Eros and Anteros:—

> Come, Genius! come—O winged child! away,
> And let us look on Nature in her play
> Bring with thee Will, and Pleasure bring with thee,
> And let us seek young Love—for where is he?
> Young Love! Which Love? Lo, there twin brethren stand;
> Each like to each, as hand is like to hand!
> One Eros is—one Anteros they name:
> Which woos thy heart with most congenial claim?
> One pure and simple, with an upward look,
> Spells the blue heavens like an open book,
> Rapt as in ether's heights prepared to soar,
> Aspiring still beyond for evermore.
> The other, with a downward aspect bent,
> Reads the green earth and watery element,
> Pleased with the inverted sky within the wave,
> And seeking there his languid limbs to lave.
> Choose now—for on thy choice how much depends;
> The earthly Love, or heavenly, these attends.
> This, like an ardent seraph, ever burns
> With light and life, like flames from burial urns;
> What though beneath mere ashes perish, climb
> The lambent glories to a point sublime,
> Though fix'd and bound to caskets deftly wrought,
> To grace what else revolts the living thought,
> From base to apex, in perpetual play,
> Still chased and chasing, each revolving ray
> Sports in free air, the imprison'd dust above.—
> Such privilege belongs to heavenly Love!
> —But his terrestrial brother, less divine,
> Falls—like heaven's flash on earth's polluted shrine—
> Smites and consumes the altar's impious feast,
> And spends itself—to consecrate a beast;
> Soon quench'd, survives, its idol-worship done,
> Nought but a weak abhorrent to the sun,
> Scorched flesh and bone, black piles of the slain—
> Rite superstitious, bloody and profane,
> Nought lingers now on that neglected pyre
> But the sad issues of the extinguish'd fire.*

Anteros was alike considered the god of mutual and of despised love. He was sometimes represented as wrestling with Eros. On ancient works of art Cupid was frequently exhibited in a great variety of forms. Venus, on coins and gems, is often attended with the Graces and several Cupids. In more than one monument she is shown in a reclining posture, with Cupid resting his elbow on her lap, while the Graces are adorning her person, and two doves conduct her car on a cloud. Cupid is commonly represented with a bow and arrows, often with a burning torch, in his hand. His love for Psyche is the chief incident of his history and forms one of the most beautiful allegories of antiquity.

The ministrations of Love are indeed inexhaustible, and his dominion is universal. Nothing for him is too low or too high. The gifted vision of the artist sees him stooping from the clouds, reaching down the mistletoe as signal for erotic sports to commence. Well may he do this, for above them St. George has gained his victory over the Dragon; and Merlin, with his wand, has diffused unnumbered spells through the air. All is mirth soon as the celestial sign appears. The sacred rites are introduced with music, and an orchestra is provided, such as only could be dreamed of in elfin-land. The table also is spread and the season's banquet bountifully heaped for the assembled guests. Some of them, too, are amusing themselves with snap-dragon, and others are dancing. Cupids are everywhere busy. Here is one with a bottle—we may guess what is in it: a merry Bacchanalian Cupid is he. Another of the same family, with a lemon; and another with the sugar-tongs; and a fourth with a ladle. We can readily interpret their important business. Nearly opposite are two Cupids engaged in transferring the pudding from the pot to the dish, and between these a pair sit two sulky Cupids back to back. It is fair to believe that they repine only because they have no occupation, and have been forestalled in their desire to minister to this festivity.

The fancy is somewhat Oriental, for it is a belief in the East that the gods delight in assuming the form of servants, to wait in some menial capacity upon those to whom they intend good. A most moral belief is this, tending much to reconcile the various conditions of life. The season of Christmas is far from inapt to enforce such a moral. All is, in fact, in favour of it. In the hospitalities of this season, master and man, mistress and maiden, alike participate—one throws off dignity, the other rises to equality. It is the time of true fraternity, the age of unquestioned freedom. All manner of liberties are taken and allowed at this solemnity. Catholic and Protestant countries are alike in this, but in the latter it takes a more domestic form; in the former it delights in public pomp and ecclesiastical ceremony. J.

P.S. A correspondent, who writes to us on the "Christmases of the Past," has compiled some reminiscences of that same "public pomp and ecclesiastical ceremony" alluded to. We cannot do better than add to our article some of his illustrative paragraphs:—

Often must the remembrance of the Redeemer's lowly birth have cheered and supported the early Christians in their day of trial, and never could the "Gloria in excelsis" have sounded more solemnly beautiful than when heard in some lone dwelling or gloomy vault where two or three were gathered together in His name. Sad it is, indeed, that almost the earliest evidence we have of the keeping of Christmas-day should be the record of a great desecration of it, when, at the church of Nicomedia, a vast multitude who were assembled on the Feast of the Nativity were burnt at the command of Diocletian. Truly was the Church "by blood of martyrdom cemented." But in the history of our own church a signal triumph of the faith happened, as the chronicle saith, "upon one day of Christ's Nativitie, which, with the unutterall glorie of the Englishmen, is for ever celebrated, when "Augustine did regenerate by lively baptisme above ten thousand men, besides an innumerable multitude of women and young children. But what a number of priests and other holy orders besides could be sufficient to wash such a sort of people? Having hallowed and blessed, therefore, the river called in English Swale, the Archbishop (Augustine) commanded, by the voice of criers and maisters, that the people should enter the river confidently two by two, and in the name of the Trinitie baptize one another by turnes.

* * * Hereupon the most gruelous Pope Gregorie, with all the companeis of saints above breaking forth into joy, could not conceale this, but wrote unto Saint Eulogius, the Patriarch of Alexandria, that hee would most thankefully congratulate with him for so great an host baptized upon one Christmas-day."

Much as this narrative is disfigured by the superstition of the times, there is, nevertheless, a fervent spirit in the tale of this nameless chronicler that will serve as an apology for its introduction.

And in a political point of view was the season ennobled by our Saxon forefathers, who held their wittenagemots under the "solemn sanctions and beneficent influences" of this holy time. We may recal that majestic assembly when in a hall of simple architecture dressed with holly, round the crackling wood fire, while the snow lay white on hill and field, and the yule-log blazed in every cottage, the primitive Parliament of England met.

There are two magnificent scenes somewhat akin in subject, but remarkable as the turning-points of vast events in the history of our own land and that of France, which both occurred on Christmas-days.

The first picture rises before the mind's eye rich in association, grouping, costume: knights, prelates, nobles, pages are gathered round a throne, and by the Pope himself Charles, the renowned in romance and legend, is crowned "Emperor of the West."

The second coronation is in our own land, and a group of mail-clad men stand round the high altar at Westminster. Doubt, rage, and apprehension are on every face, and the crowned King himself trembles; but yet the ceremony ends, and 'midst gleaming arms, mitres, and cross-es—the cry of woe rising with the voice of congratulation—the Norman line begins in England.

On a Christmas time, too, Becket fell; and it was on a Christmas-day that, in his own cathedral, he preached from a text to be so terribly verified three days after—"Venio ad vos mori inter vos."

It was the Feast of the Nativity that the confederate Barons appointed for their great meeting with King John, they having on the preceding November solemnly pledged themselves to demand redress of their Sovereign on the ensuing Christmas; and, if circumstances had not deferred the meeting, the establishment of England's liberties might have dated from a Christmas-day.

We have a touching proof of the blessed influence of this festival in the history of our wars in France, when, during the siege of Orleans, "the solemnities and festivities of Christmas gave a short interval of repose, the English lords requesting of the French commanders that they might have a night of minstrelsy with trumpets and clarions. This was granted, and the horrors of war were suspended by melodies that were felt to be delightful."† But in later times war has not failed to desecrate this hallowed season, and, on the anniversary of that eve when peace on earth was proclaimed by the angelic choir, one of the bloodiest battles between the White Rose and the Red was fought at Wakefield. But the mention of that field recals the memory of him in whose pages the scene lives for ever. It recals one dear to poetry, to pageant, to Christmas—in short, to everything English—William Shakspeare; and with his name is connected the Augustan age of English Christmases. Often were Shakspeare's dramas acted at this season, and the stately tragedies of history, or the mystical creations of fancy, were "played in jest by counterfaiting actors" before the great Tudor Queen. We never hear of Elizabeth forgetting the actors in her Christmas revels, for then

> They thought it good to hear a play,
> And frame the mind to mirth and merriment,
> Which bars a thousand harms and lengthens life.

In the noble's hall my lady the Countess, and Bridget the farmer's wife, the heir of the broad acres, and the ploughman who tilled them, met on one day as equals; but there were no suspicions then of "levelling principles," no malapert guest ever suggested that property was robbery, and proposed an equal division of my Lord's possessions; the banquet was enjoyed, the ale circulated, and not a murmur was heard because some aspiring visitor was below the salt; every man knew his place; and, when the mummers, the dance, and the mistletoe succeeded, all the guests made up their minds to be merry, and with song, laugh, and wassail the "drear-nighted December" was made bright by the coming of Old Christmas; but the scene has been painted and described too often, and why should I

> Revive the dying tones of minstrelsy
> Which linger yet among long Gothic arches,
> In dark green ivy and among wild larches,—
> How sing the splendour of old revelries,
> When butts of wine were drunk off to the lees? Keats.

With Elizabeth the festivities of Christmas declined. The "young courtier of the king" left his father's halls for the dissipations of London, and the gold that of yore kept up the Christmas revel was lost at the gaming-table. This courtly extravagance and the civil wars to which it was the prelude quenched for ever the glory of English Christmases, and the gloom of Puritanism gave them a deathblow. But we regret not the glittering and noisy revel of the past; in Christmas of our ancestors was suited to their age, and our own mode of celebrating it is adapted to ours.

But the holiest thing in every recurrence was the awakened memory of the first great day. To the sincere believer in the early ages of the Church—to the minstrel though devoted priest in the days of Gothic darkness—to the earnest soldier who, through battle and toil, journeyed to the land that day had hallowed—to the hospitable baron, who in his own hall gathered his tenants round him on this festival—to the poor and houseless in every age and country—came the vivid remembrance of the shepherd-worshippers—of the Eastern sages led by that beacon star—of the manger where they laid the Incarnate Saviour—all the history came, and comes still, with kindly influence on every heart, the great origin of the religion of the poor. But we have done. The Christmases of the past bring lessons beautiful and true; and now over the whole of Christendom in stately temples raised to the worship of that lowly Child, around cheerful hearths, where families are met after the year's toil and sorrow, the anthem of joy and praise rises to celebrate the Christmas of the present. C. H. B.

* Pleasures of Genius. Part III.

CHRISTMAS THOUGHTS OF THE CRYSTAL PALACE.

BY DOUGLAS JERROLD.

The wonders that filled the Crystal Palace are gone, passed away, like the hues of yesterday's rainbow. The strangers who, for awhile, met together as re-united members of the great human family, have gone to their several homes—gone, can it be doubted, with gentler thoughts towards one another—with enlarged hearts, and tenderer sympathies. For many a year will stories of the Crystal Palace pass from generation to generation; and, at length, the great marvel will become a lovely legend glittering far in the past, and with its mysterious lustre lighting 1851—a star upon the forehead of old Time. Books are things of generations—vital as flesh and blood, says the poet—and haply these pages may survive their century; when, to yet unborn eyes, the simple story of a simple traveller (as we give it below), a story told to one he loved, may add another record of the wonder-working influences of the Crystal Palace.

FROM ARTHUR LAMB, AT THE SARACEN'S HEAD, SNOW-HILL,
TO MRS. DOROTHY LAMB, ST. BEES.

"Dear Doll,—Burn all my books of travels; put 'em in the fire for heretics and false witnesses. I have seen the world—as I said I would when I took my staff and bag, and kissed you with the tears in your eyes, at our cottage door of St. Bees—I have seen the world; have judged for myself; and the upshot is this: I love the world and all that's in it—yes, even you, dear Doll, whom I've loved for forty years next Michaelmas, and thought I couldn't love any better—I love you more than I did; and the reason is, my heart's bigger and softer; it has grown and mellowed under the Crystal, for all the world as a pumpkin grows under a glass frame.

"You know what I used to think of the world. You know how I used to bless myself that our lot was cast at St. Bees, far away from the strife and wickedness of the earth. You know how I used to look at foreign lands and foreign folks through books, just as at a fair we look at wild beasts through iron cages; look, and for all we know we're safe, look with a sourish eye upon 'em. But this came of travellers' books, all of which I say to you a sin—burn—burn—burn. Let 'em pass in smoke through the chimney; and with them all the false and uncharitable thoughts they begot in us. For the world as it is—the real world—the beautiful world, filled like a honeycomb with sweetness, is shown as in a looking-glass, in the Crystal Palace!

"Providence, dear Doll, Providence by little birds teaches man that the blessings scattered throughout the world are only scattered for the benefit of all. A beautiful lesson, and I say it—little birds, if men will consider and listen to them—little birds are its blithe teachers. At one season singing in the north, at another shifting to the south; now giving us vernal and summer delights; and now carrying their song to softer regions. The swallow from the eaves has, in all time, twittered this wisdom; and the world has begun to hearken to it.

"For the world has come together, and we see what a beautiful world it is—how made for the mutual comfort and the mutual enjoyment of all men. Not the world of travellers' books; but the real world—the working-day world, as shown in the Crystal Palace—the world that, with a brightening mind and growing heart, I have wandered over, now in one kingdom, now in another. But I will give you, in brief, my travels. Only a few sentences; the rest will serve for many a winter night, when the wind and the waves are roaring and tumbling without, and the fire burns all the brighter, as if in defiance of 'em.

"It was with a strange fluttering of the heart, with an odd lightsomeness of spirit, that I took my way from my inn, and began my pilgrimage through swarming London—through London, for awhile, a caravanseral for all men of all nations. And there were thousands unable to say an intelligible word to one another, yet all feeling in their hearts the same big feeling, all showing in their faces the same one desire. The stranger could not give utterance to the stranger, but the universal breast swelled with the one great theme.

"As we wound through London, anticipation grew with every step. When should we see the Crystal Palace? When should we catch a first ray of its brightness? Would it satisfy us? Were we to be now in a fervour of delightful expectation, and now plunged in the cold waters of disappointment!

"'Is that all?" Those three little syllables that, in this world, have so often tolled the knell of human hope, would they again have mournful utterance, telling of dead fancy? 'Is that all?' Those three mischievous genii that, with a breath, break up the fairy vision that enchanted us, leaving us on a cold, barren heath—on the wide waste of hard reality!

"With this thought the Crystal Palace glanced upon me! The great surprise flashed into my eyes and heart, and I seemed to grow with wonder. How vast, and yet how light! At once a wide-world temple and an exhalation! Wonderful the great stone pyramid, but how small to that mount of vitrified sand!

"'Is that all?" With an uplifted heart, that swelled with the human triumph—for it was the conquest of my brother man—with a religious reverence for the brain that thought it, and the hands that fashioned it, I asked, almost in dreaming doubt—'Is it all that?'

"After awhile I stood beneath the Crystal roof. I was one of the thousands, but for a moment felt of no more account in the multitudes than as one grain of sand to the million millions of grains that shone crystallised above and around me.

"And now, Dolly, after taking breath, now to tell you of my travels. Having baptized my new-born veneration at the Crystal Fountain, I turned at once into the kingdom of Tunis. You know what horrid stories have been written of Tunis? How they cut off heads there, and bowstring poor people; and how they kidnap young women, and sell 'em like turtle-doves? Travellers' tales, my dear Doll; travellers' tales. Not a bowstring did I behold; not a cry as from one in suffering and affliction, as surely a man bastinadoed—as it is called—must be. No female slaves; not so much as an infant in bondage. Nothing of the kind; nothing to shock the Christian mind, raised and softened by Christian practice; nothing but shawls and mantles, and goat-skins, and Arab shoes—that carry one away like the giant's forty-league boots—and pipes and lion-skins, and essences of quince, of benjamin, of aloes; and figs that would melt in the mouth; and ostrich feathers to tell us that all is vanity—for what a part, Doll, feathers have played upon the heads of the mighty, that are now mighty dust! And then there was grain of all sorts; lentils, that you read of in the Bible, and fenugreek, and coriander. And in the whole kingdom I beheld nought of unkindness or guile; for I will not dwell upon a certain khol, a collyrium with which the pretty ones of Tunis blacken their eyelids to make them killing. For, alack—Dolly mine!—have not the women of England their collyrium, though of another and a thousand other sorts? And so I left the kingdom of Tunis; having shaken hands with the Turk or Morocco man, and shaken from my mind all travellers' tales, that would cast a shadow on a lovely and abounding clime.

"I next turned into China. What a patient and pacific people! And how they look on the very brightest and rosiest side of all matters; a sweet truth manifested in their porcelain! Beautiful are their mandarins, and unwrinkled their women! What an enviable eye have they for the outsides of things, when the world of delf is made a world of rainbows! Wise and benignant folk, who wreathe the hours of working-day life with the beauties of thought, and hang them with the fruits of the imagination! And then the carving! Are these ivory balls, these boxes, cut by human fingers? Surely not; they are eaten out by myriads of little ants, taught and disciplined by Chinese fairies. Sweet flowery kingdom! And it is of thee, China, that travellers tell tales of infant murder—of rapine and tyranny—and famine—and every sort of heathen brutishness! It is of thy millions of homesteads they tell stories of barbarity; how that thy houses are, from morning to night, and all night till dawn, filled with the wailing of baby-girls, whose feet have been snatched from the hand of nature by the hand of heathen brutishness, and crushed in an iron box—the young bones hardening in agony, the flesh and blood festering with fever. And it is of thee, China,—oh, land of legendary little feet,—travellers tell these tales! Where do travellers think they'll go to?

"Leaving China, I travelled through Switzerland. Here I found Time served with all honour and sacrificed to with precious offerings. Time made very beautiful. Not Time with his scythe—the mower of all fleshy grass—but Time with a thousand delicate clocks and watches, that nicked off the seconds and minutes with a silver sound, as precious things gone to make the past, that still makes to mortal men their mysterious future. Here, in Switzerland, Time was made the most and best of; and his music—the music that the very planets roll by—now lightsome and cheerful as the pulses of an infant's heart, and now sweetly solemn as a hermit's prayer. And of all people of the world the Swiss have a right to treat Time with reverence, for they have made Time go hand in hand with liberty. A thought twanged to my mind, by the long bows of laburnum of the Jura, with a thought of their arrows singing, as they fly, of William Tell.

"Spain was my next destination. Spain—according to wicked travellers—full of poverty and pride—Spain I found a place of blessedness. What a mighty wine-jar from Tobosa! And from its odoriferous mouth—nay, through every particle of it—there came such a delicious

* Sharon Turner.

whiff that carried me back to nineteen. the delicious time when my bright life was still brightened by *Don Quixote*. I was again at Camacho's wedding; again heard the hum of the guitar, again smelt the odour of flesh-pots. Spain! how teeming, how fertile is every step! What amber wheat—what saffron and yellow maize! Aland where Ceres laughs even while she sleeps! And then the wool—oh, Dolly! did such wool ever grow on what was doomed for earthly mutton? Is it not the golden fleece of Arcady—(you remember in our days of courtship when I read to you Sir Philip Sidney?)—a wool fed upon crocus and asphodel, and shepherded by Apollo? Away from these are the swords of Toledo. There was one mortal length of steel tied in a knot to manifest its good temper—coiled like a sleeping snake—and I thought it the very kind of weapon to be shown in such a place, and at such a time! Yes—dormant war, torpid homicide—lain in a long trance. And a sword so tied and twisted appeared to me all the fitteremblem after I had looked upon some bright steel cannon in Austria: cannon with stupid, open mouths, gaping as in brute wonder at the world of peace and industry shepherded by Apollo? Away from these are the swords of Toledo. There was one mortal length of steel tied in a knot to manifest its good temper—coiled like a sleeping snake—and I thought it the very kind of weapon to be shown in such a place, and at such a time! Yes—dormant war, torpid homicide—lain in a long trance. And a sword so tied and twisted appeared to me all the fitteremblem after I had looked upon some bright steel cannon in Austria: cannon with stupid, open mouths, gaping as in brute wonder at the world of peace and industry about them. And then the diamonds of the Queen of Spain! how pure and brilliant, and beautiful! Magnificent Spain! and is it of thee, delicious country, that the evil-minded tell tales of misery and bloodshed, of craft and theft? Is it thee, Hesperidean Garden, that men blacken with words of broken faith and broken bonds?

"My travels in Russia filled me with amazement and delight. There were doors of malachite—doors fit to be the gate to the Temple of Justice! doors of unalloyed gold and everlasting green! And these from Russia; from that frost bitten piece of earth, that to think of was to shiver to the toes! And what wonderful jewels! Precious stones, carved into grapes, with the very bloom upon them. And then the grain! Wheat and barley, and millet and rye! What masses of iron, too! And no chains—no fetters—no models of Siberian mines, where—as the slanderous and evil-minded report—the heart of the exile withers and breaks! No; all here is beautiful, or strong; all free, vigorous, and kindly. Mighty Russia! mighty in thy natural riches, and mighty in thy wisest guiltiness! I looked for the knout, and I found ropes of tobacco!

"In Austria all was industrial goodness. What furniture! There was a bedstread whereupon Bellona herself might go to sleep, and dream of Hungary filled with peace and happiness. Yes, indeed, was Austria; but some how she had a knack of writing her own name upon the goods of other nations! Or wherefore should she take to herself the gentle doings of the silkworms of Milan—wherefore lay her grasping hand upon the Amazon and Tiger, a triumph of the art of Hungary?

"In France the arts flourished, without a red spot of glory to blot and taint them. And what a land is Algiers! And how delighted poor Abd-el-Kader must feel when France keeps her word, and no longer keeps the Arab!

"And so, my dear Doll, I wandered from country to country; and from Tartary to Australia—from Sweden to Peru—every step of the way was a path of festivity and beauty. Every object had its claim upon human attention, as a sort of deputy, a representative, sent to the great congress of peace, preaching amity and good-will to all men.

"And now, dear Dol., I feel that I have been all over the world, beholding all countries in their time of Jubilee; seeing—as Mr. Canaan, our curate, whom I met in New Zealand, says—seeing that in the year 1851 is foreshadowed in Crystal the reality of no very distant future; when all nations shall be linked together in the lasting bonds of peace, and war be thought of as we now think of cannibalism—mankilling and man-eating being alike monstrous and impossible.

"And now, Dolly, I have nothing to do—being very tired—but to remain your affectionate husband and faithful traveller,

"A. Lamb.

"P.S.—I shall bring you home the Koh-i-noor in glass; which is no other than the diamond adapted to the lowest capacity of pocket. Quite as good—judges tell me—as the real stone, with the superior advantage of cheapness."

KING BRONTO'S DAUGHTER;

OR,

THE SCHOLAR-KNIGHT.

BY A. R. MONTALBA.

In bygone days, and in a certain portion of the globe, reigned a monarch who possessed an only daughter. She was called Lindamira, and her beauty was so exquisite that she was the sole theme of conversation amongst the inhabitants of all other kingdoms and empires. Wherever she was expected to appear, thither flocked the whole population, and there they waited, day and night, with the same praiseworthy patience which we admire now-a-days in the people of highly-civilised nations, when they assemble in anxious expectation of witnessing the execution of a murderer. Lindamira was the morning star, the harbinger of approaching joy and prosperity. On the next approach of her seventeenth birthday, which happened on the day named Plumpudding, in the annals of that distant and antediluvian age, the King resolved to celebrate the important epoch with all possible magnificence, and caused a tournament to be announced, to which all Princes and knights were ceremoniously invited. The tournament was to be followed by balls, theatricals, fireworks, owl and rat fights, and all imaginable festivities, games, and entertainments.

Whilst the preparations for the festival were going on in the empire of King Bronto, all manner of persons, invited and uninvited, heroes and idlers, attracted by its widely-spread fame, arrived in the capital. Amongst others came the renowned knight, Lancelot of the Yellow Tower. He derived his name from his castle, the ramparts of which were composed entirely of lemons slit open, that by constantly discharging their juice into the rum which flowed in the moat from a natural spring, like the alcohol or asphalte ones in Georgia, consisting of sugar, produced most excellent punch. It must be needless to observe that this is not in accordance with the ordinary course of nature. It was, in fact, the work of a benevolent fairy, who—as was also known to many hundred or thousand years before—had, by this feat, agreeably surprised one of Lancelot's ancestors on his birthday; and as this punch possessed the marvellous gift of reconciliation to such an extent that even the greatest foe of the Yellow Tower race, so soon as he had taken a hearty draught of it, became so warm a friend that whatever was said or done by a member of the Yellow Tower family seemed in his eyes good and praiseworthy, it will not be thought surprising that the race lived from generation to generation in the profoundest peace. The fiery Lancelot was, however, much annoyed by this circumstance, and he seized the opportunity afforded by King Bronto's festival to indulge himself at least in warlike sport, since war in earnest could not approach him.

The tailor who was to adorn the knight for the occasion, and the saddler who prepared the accoutrements of his charger, were both behind time, so that he was the latest amongst all the knights in reaching King Bronto's domain. What was the astonishment of Lancelot when, instead of the expected joy and merriment, he found everywhere the marks of the deepest affliction! The roads were covered with black cloth, the horses were shod with felt; every tree was shrouded in a veil, the houses were fenced with long mourning letters and scutcheons. Before one of them stood a signpost, on which was painted a raven, and beneath it the words "To Sadness." Lancelot perceived that this was an inn. In spite of the ominous sign which swung to and fro in the air like a board of invitation to economically-disposed travellers, Lancelot pulled up his horse, for he was very hungry, not having yet breakfasted; besides which, he was very desirous to learn the cause of such extraordinary marks of woe. The host appeared; and Lancelot was not a little surprised on perceiving that he wore on his mouth a sordine, such as trumpeters use to diminish the sharpness of their instrument.

"Are you crazy, worthy host?" cried Lancelot, "what queer thing is that you have got upon your mouth?"

The host replied, with much seriousness, "Your Grace, your Excellency, your Royal Highness, or by whatever title of respect I ought to address you, I must entreat, first of all, that you will not speak so loud, and that you will also sin from laughing, inasmuch as this is prohibited on account of the affliction that prevails through the land. As to the sordine, I beg to inform your Grace that, in my zealous sadness, I have imposed it upon myself. I am much in the habit of talking to my various highly-respected customers of myself and my occupation; and on such occasions I am apt, like authors when speaking of their own compositions, to get rather loud. In order, therefore, that I may not violate the edict, I stifle the sound of my voice by means of this sordine. I perceive that your Grace wishes to inquire why this universal sadness reigns. I reply, most humbly, that your Grace will learn this more satisfactorily at the court of his Majesty King Bronto; my grief is too deep to allow of my explaining the cause, otherwise than by singing, and the sordine does not admit of this. Has your Grace any command?"

"I should like to have breakfast," said Lancelot.

"What would your grace like?" resumed the host; "a German breakfast? *déjeuner dinatoire?* roast beef?"

"During my residence in London I used to take green tea, and am very particular about having fresh butter. Let me have the same now."

"Your grace will excuse me," replied the host, "but since the general mourning black tea only is taken, and the butter is mixed with anchovy paste, in order to take off its naturally white hue, which is not in accordance with mourning."

Thus saying, the host rang a bell, and a black face appeared at the window, to the possessor of which the host communicated the knight's commands, and then pursued his discourse.

"I observe that your grace is surprised to see my sign and my black waiter. The first was originally a white pigeon, and the legend 'To mirth.' The waiter's face, however, cost me a prodigious sum of money. It cost the French polisher three whole days' work before he could give it its present fine ebony hue. I have done my utmost, but still my display of mourning is very trifling compared with what may be seen elsewhere. We have cast 'the trappings and the garb of woe' over all nature; no horse may neigh under penalty of a three days' deprivation of oats; the birds are only to sing in flats on pain of banishment; bakers and cooks are ordered to burn their productions till they are black, or to consume them in their own families. It is even reported that the stage decorator is occupied in endeavouring to blacken the sky for a whole week; and I am told that a great natural philosopher thinks that he has discovered the means of separating the light of the sun's rays from their heat, so that the light shall remain in the upper regions, and only the heat reach us."

By this time Lancelot had finished his breakfast, and asked for the bill.

"A mere trifle," said the host; "I would ask only for three clever thoughts."

Lancelot fancied he had mistaken the host, but the latter resumed:—"I propose publishing a new annual next year; your grace would scarcely believe how very rarely clever thoughts are to be found in publications of this nature; and, with the hope of obtaining some, I put all my guests in requisition."

Lancelot drew out a packet of his poems, and flung it to the host, with the words, "There is payment for at least three months."

The man put them into a sieve, shook it, and all the poems fell through.

"Your grace will excuse me, but there is not a single thought amongst all these—mere chaff."

Lancelot now threw into it his commonplace book. The host shook the sieve again; only the blank sheets remained above—all those on which there was any writing went through.

"Upon these," said the host, "I will write a humorous tale. I accept these in the place of clever ideas. Farewell," he cried; and the knight rode off.

When Lancelot arrived at the palace, he found all the illustrious visitors collected in the grand hall. He dismounted and joined them. King Bronto was seated on his throne, and thus addressed the assembly. "Fair and valiant knights and princes, Shaksepeare says in his tragedy of *Hamlet*, which you all have, or at least all ought to have, read,

'With one suspicious and one dropping eye.'

Although the individual who is represented as uttering these words is not in any respect to be compared with me, inasmuch as he was worthless, whilst I am virtuous, I cannot refrain from making some remarks upon these words, which are entirely applicable to my present condition. I request, therefore, your attention and patience, upon neither of which I shall make any heavy demand, for, though I propose to divide my discourse into two parts, I shall not only treat them briefly, but I am also, as is known, an eloquent speaker. You will hear, therefore, much that is grand and beautiful.

"Wherefore is one of my eyes 'suspicious'? Because of my daughter. What has she done, or what has befallen her? That is the question. Now attend. My daughter has a parrot, which is very dear to her. This parrot has already, for a great, I might say an unknown, length of time, been an inhabitant of our residence. By some he is supposed to be an unsuccessful author, for he is incessantly uttering his own praises; others assert that he is a discontented politician, on account of his always trying to bite. Many think he must be a wit who has retired from the world to the privacy of a cage, because his jests are no longer found entertaining. It is, however, certain that both he and the Princess Lindamira, my daughter, always say the same things, and at the same moment, from which my poet laureate infers that the parrot is Lindamira's double or second self. Let it suffice that the Princess, being desirous to immortalise this bird, resolved on working a piece of tapestry, in which her needle should represent him in different attitudes. Just as she had completed the first portrait an ape suddenly entered the chamber. By what means no one could tell, for he was not announced by either the chamberlain or any of the ladies in waiting. He held in his mouth a Chinese doll, which had an umbrella in its hand, which he threw down at the Princess's feet. The Princess gazed on the image in astonishment and admiration, and she and the parrot exclaimed simultaneously, 'These two figures must also be embroidered in the tapestry!' and Lindamira forthwith set to work. In the evening, when I presented myself at her tea-table, they were already both completed. We were quite alone excepting my page in waiting, a handsome young Chinese. I remarked, as he presented a cup of tea to the Princess, that she looked at him very earnestly; but as it is her habit to look very attentively at handsome young men, I did not suspect anything amiss The young page, however, wasso dazzled by the brightness of her gaze, that he poured the contents of the cup over her dress. 'This proof of sentiment shall be immortalised,' exclaimed my daughter, and the same evening she entered the summer palace, whilst I went to the theatre. At bedtime my Chinese page attended upon me as usual, but in undressing me he made use of one hand only. 'I thought that the master of the household had ordered it to be struck off for having been guilty of some awkwardness whilst waiting;' but the page said that was not the case, but that his other arm had disappeared, he could not tell how. I desired him to have it publicly cried, as is usually done when things are lost; but whilst I was still speaking his other arm disappeared. I sent for my head physician, whose office it is to put on my night-cap, intending to consult him on this singular malady, but by the time he arrived the pages legs had also vanished. 'How can I cure him?' cried the physician, 'I can no longer feel his pulse. It is, however, possible that a violent spasmodic affection may have contracted his arms and legs into his body, and some powerful stimulus to promote reaction must be applied. The most effective method of proceeding will be to whip him with nettles.'

"Before, however, the superintendent of the palace gardens had brought the nettles from the conservatory the body of my page had disappeared, and only his head remained visible, and that also vanished by degrees—first the forehead, next one eye, and then the other. When the last eye had departed the mouth exclaimed, 'Now I see my lost limbs: the Princess is working me into her tapestry.' The mouth continued for a time in motion, as though it were endeavouring to speak; but at length it also disappeared. I dreamt the whole night that I saw a hundred mouths in my chamber, incessantly opening and shutting; and, when I awoke, a pale and excited chamberlain, belonging to my daughter's establishment, entered and informed me that a dreadful event had occurred. I immediately assembled all the members of council, and, attended by them, went out to convince myself of the truth of what had been reported to me.

"I must here request you, my respected and beloved hearers, to note how truly Danveshmic my discourse has hitherto been, and in how masterly a manner I parenthetically interrupt my address at the moment of the highest interest, in order to excite your sympathy.

"Let us proceed, or rather, to exhibit my powers of rhetoric, we have already proceeded, and now stand in the Princess's summer palace Behold her stretched on a couch in all the radiance of her beauty, but in a deep swoon, from which nothing can awaken her! The tapestry lies at her feet, with my Chinese page embroidered into it, in the very attitude in which he was when the Princess fixed her glance upon him as he handed her the tea. Precisely as the Palace clock struck the midnight hour the parrot begins to sing, the ape springs out of the tapestry, draws on a pair of yellow gloves, and offers his hand to the Princess. Lindamira rises, bends to him, and now they proceed to the most extraordinary dances—gavottes, waltzes, polkas, the schottsche, galoppes, or redowas, as they are called. The beauty of their dancing can only be compared to that of Cupid and Psyche. Tais continues for a whole hour, when a shower of tea begins to fall. The page lifts his hand in order to catch the tea in the cup, but the Chinese puppet starts out of the tapestry, and spreads the umbrella over him, so that the tea cannot fall into the cup. The page whimpers for a while, and then all the figures sink again into the tapestry, the Princess again reposes on her couch, and remains in that condition till the following midnight. Now, gentlemen, you know why the one is 'suspicious' and therefore the other is 'dropping' you shall be informed in the second part of my discourse."

Here King Bronto paused, and, after having allowed full time for himself and his audience to cough and hawk to their satisfaction, he thus proceeded:—

"Amongst other excellent institutions founded by me for the public benefit is the '*Supreme College*,' exclusively devoted to matters of enchantment. To this college I applied for counsel, and am informed by it that the extraordinary event I have just related is the work of the enchantress Lucenera, and the product of her romantic studies. Through diligent study of the records of enchantment, it has been ascertained that by an enactment of considerable antiquity a princess under the spell of romantic enchantment can only be freed therefrom by the agency of some knight of whom it can be proved that, after having passed through his collegiate with credit or otherwise, as may be, he, after becoming his own master, shall have actually read through some one classical author, either Greek or Roman, within twenty years after such emancipation. The college closed its report with the observation, that, in consequence of the above statement, the deliverance of the Princess, although possible, is, however, highly improbable, as the College of Magic is under the necessity of acknowledging that it is not aware of the existence of a single young lord who responds to this condition.

"I might now conclude my discourse by asking you in plain terms whether there is one amongst you competent to disenchant the Princess, and at the same time promise, in case of his being successful, to bestow on him her hand. But every discourse ought to be concluded by a heart-stirring peroration, and of this I will not deprive my audience.

"Noble-hearted youths! have you comprehended the condition on which the rescue of the Princess depends? If there be one amongst you able to fulfil it, let him come forward! Let him not be ashamed to confess that in a moment of weakness he has once turned aside from the poetry of romance to give attention to a writer of antiquity. Nature has her caprices; why should not taste also have hers? Oh! come forward, thou highly-favoured youth, who, through a moment of weakness, hast won the highest bliss of life, the fair hand of the Princess Lindamira! From sunrise to sunset I could dilate on her charms until your heart would grow brighter than the sun approaching comet of 1811 at the more attractive than the total eclipse of the sun in 1851; more descriptive and marvellous than the Crystal Palace for the Exhibition of the Industry of all Nations, prophesied for the same remarkable year. Already I perceive your noble ardour, as you wait with impatience scarcely to be restrained till I shall have finished my oration, that you may offer yourself as their deliverer; already I hear a low approving murmur; already I see you rise from your seat to make the great confession; no longer will I restrain your noble ardour. Come forward, thou noble-hearted! Forward, forward, forward! Dixi!"

Unbroken silence prevailed throughout the assembly. Not an individual rose from his seat. The listeners looked at each other in utter embarrassment; till, after a painful interval, Lancelot, the knight of the Yellow Tower, stood up, and thus addressed the King:—"I never read the classics; nevertheless, it may be in my power to set the Princess free. Some time ago I was troubled by an inability to sleep at night, and it occurred to the secretary who was at that period in my service to read Sallust aloud to me. I listened to him for many nights, but so obstinate was my complaint that my wakefulness could not even be vanquished by that, although he was so persevering that he actually read the whole book to me. Nay, I was even beginning to like it, when one day the work when my physician brought me a new Easter burlesque. This put to flight both Sallust and my wakefulness. I will try my fortune with the fairy Lucenera. If I do not succeed, so be it."

The King clasped the noble knight to his breast; the president of the College of Magic furnished him with a "Bradshaw" and all Murray's Guide-books, and the following morning found him already at a considerable distance from Bronto's residence.

Night surprised him on a wide heath; a solitary tree spread wide its shady branches, and at its foot sat a young man beside a remarkable-looking maiden, both reading the same book. Lancelot rode up, and recognised the secretary who had read Sallust aloud to him.

"Welcome, noble knight!" exclaimed the latter; "whither ride you?"

Lancelot dismounted, and confided to him the purpose of his journey.

"Be of good cheer," said the secretary, "we will assist you; but first take breakfast with us; we can offer you delicious coffee."

Whilst the lady made some passes in the air, whereupon an elegantly set-out coffee-table descended from the clouds, Lancelot inquired her name.

"She is the celebrated enchantress Emira, she who is endeavouring to restore the taste for classical literature in Fairy-land, and I am engaged as her philological professor and reader."

Breakfast being over, Emira thus addressed the knight:—

"Sir Lancelot, I am acquainted with your design. You beheld in me a pupil of the Princess, because she, at least, bought the last translation of Pindar, although she has not read it. Lindamira cannot be freed from her charmed sleep until the Chinese page shall have collected in a cup the tea which I daily cause to fall in a shower in her chamber, and presented it to her; and, before this can be effected, you must remove the Chinese image with its umbrella. My friend, your former secretary, shall accompany you, and I hope will be able to assist you. Farewell, my beloved!" continued she, turning to the secretary; "write to me by every post—how you are, and if you still love me. When you shall have accomplished your undertaking, return to my residence. During your absence I will occupy myself on a new commentary on one of the books of 'Iliad.' Farewell!" She gave him her hand to kiss, and vanished.

"Courage, sir knight," said the secretary; "all will prosper. I am well acquainted with the fairy Lucenera. She is an authoress; and Lucenera is only the assumed name under which she inundates Fairy-land with her productions, and by which she fancifully indicates that she intends by means of ink to diffuse light throughout the elfin world. Take me up on your horse; I will be your agent, and manage the affair for you. I have just been reading 'Lucian of Samosata,' and feel within me humour sufficient."

The knight was well pleased, and they pursued their journey.

After riding some time, they perceived a hut at some distance from the road; it was Lucenera's dwelling. She was seated at the door paring potatoes. As the travellers approached she rose and saluted them courteously.

"Be not surprised at finding me thus employed," said she; "I am at present engaged in writing a pastoral epic, and, in order to acquire the true Walter Scott style, I have resolved to perform with my own hands all the processes I describe. When the kind of labour, however, is too severe for my delicate frame, I substitute for the real action a species of poetic imitation; in other words, go about for an hour making gesticulations, as though I were mowing or chopping wood, &c. To what am I indebted for the honour of your visit?"

"This gentleman," replied the secretary, pointing to Lancelot, "is in the bookselling line, and desires greatly to publish an idealistic, humorous romance, by your artistic pen."

"Ah!" sighed the Fairy, whilst a gentle blush tinged her cheek, you give me inexpressible pleasure—you do me too much honour; but I have at present no work of the kind by me, and am quite unable to

produce one, for my humorous genius has fled from me, and has stolen my ideal."

"Stolen *your* ideal?" inquired Lancelot, with surprise.

"Unquestionably," answered Lucenera. "Are you a bookseller, and know not that the purely positive, the absolute real, is now the rage? I provided myself, therefore, with a positive ideal, a Chinese puppet with an umbrella; really a charming thing, I assure you; but my humoristic, which I had rendered objective in the form of an ape, took dudgeon at all the ill-natured, envious criticisms with which the reviewers waged war against him and the ideal. And so he carried off my ideal, has fled from me, sworn, by the printer's ink, an oath as dreadful as that of the gods by Styx never to return to me until I shall have produced something that all the reviewers shall commend; and that I can never hope to do, owing to the martyrdom to which in my just indignation I have consigned their condemnatory pages. Only look here!"

She opened the door of her study: there lay a literary journal, the whole series transpierced by a dagger. A sheet of another periodical was powdered with arsenic; three lines from a third swam in sulphuric acid. All the tortures assigned by Dante to the souls in perdition were exhausted on these sheets. "Thus does Lucenera avenge her wrongs," was inscribed in transparent letters on the hangings of the apartment.

"But on him, too, my faithless humoristic, on my ideal, and on his present mistress, I have also taken fearful vengeance," continued Lucenera; "I have"—here the pseudo-publisher interrupted her. "This gentleman," said he, turning to the secretary, possesses the means of reconciling you to the reviewers." "Can it be possible?" cried the Fairy—"oh, speak, speak!" The secretary thus addressed her: "You are probably aware that numerous handbooks of geography are in existence. Be so obliging as to turn to the article 'Yellow Tower,' and you will find under that head a full description of the celebrated punch moat. This gentleman makes it over to you. You will invite all critics and reviewers to a punch feast, and, until the moat shall be drained dry, not one will again molest you, and your genius of humour and your ideal will in consequence gladly return to you."

No sooner said than done.

This favourable reception induced the ideal and the humoristic to return to the fairy Lucenera; but their images remained behind worked into the tapestry. When the next shower of tea descended, the page was enabled undisturbed to catch it in his cup. He presented it to the Princess, who drank it, and thus the spell was dissolved. The page then tore open his vest and displayed a brilliant star on his breast. He was in fact a Prince. "Princess, dost thou love me?" he exclaimed; and the Princess replied, "Yes, Prince, I do love thee!" Bronto felt a little embarrassed, for he had promised her hand to whomsoever should set her free; but Lindamira explained that she would sooner fall again under the pell than espouse any other than her beloved. Lancelot now spoke and released the King from his promise. "A noble action is its own reward," added he; "nevertheless, I request you to give me as a *souvenir* the cup which the Prince held before he was stitched into the canvass." "Take it," said the Prince; "your modest wish brings you good fortune. The cup possesses two remarkable properties: if a maiden drink from it, she is constrained to love its possessor. If, however, he drinks from it, he will have on that day as much gold as he may wish for. Lindamira loves me, and I have in my own country one hundred cubic miles of the purest gold; the cup, therefore, is of no importance to me."

Lancelot replied, "So much the more valuable is it to me. I was aware of its properties, and for that reason gave it the preference."

The secretary asked as his reward for a copy of the lost books of Livy, and went straight back to Emira to pursue his studies with her. Bronto, the Prince, and Lindamira went off to Lucenera's punch feast, where they resolved to celebrate their nuptials. Every road was thronged by the nation of Reviewers.

It seemed as if all mankind were performing a pilgrimage. What occurred to the three travellers there we are at present unable to say; we have lost sight of them, for the crowd increases day by day, and the nation is still drinking; but, since we as yet have no clear vision to our Christmas dinner, and no prospect of either roast beef or pudding at home, with the certainty that the punch still will be *there*, and in the probability of finding a solution of the whereabout of our *dramatis personæ*, we intend journeying thither.

STANLEY MORTIMER;

A TALE OF MENTAL ACTION.

BY JOHN A. HERAUD.

ILLUSTRATED BY THOMAS.

PART I.

Mountain solitudes, wide wildernesses, the sands on the seashore, desolate heaths, or other of the grander scenes of nature, are not invariably needed by the Child of Imagination for the growth and maturity of the power. The special gift may find appropriate aliment in the simplicity of a country lane, or the gentle elevation of a suburban hill. The life of the town, even, with its occasional rural walk, may be sufficiently suggestive; and the sublime faculty, from the merest hints and commonplaces, construct its peculiar world.

Never was the truth of this proposition more fully illustrated than by the early experiences of Mr. Stanley Mortimer. In the pleasant village of Ivfeo, one of the pleasantest, indeed, in the county of Middlesex, he progressed from childhood to boyhood, the tenant of an humble cottage, under the care of a peasant foster-nurse. Orphaned by one parent, and neglected by the other, the Motherless Boy was left to shape his course as he would, or as the kindly caprices of nature might direct. On a dull mind her loftiest scenes are ineffective; with the sensitive soul her meanest are creative.

In that cottage his mother had died, the victim of an unloving husband whose mercantile habits had made him too stern for the domestic affections. During the long period of her declining health and sickness, she had amused herself with some choice books, which, after her death, were left on the bookshelves suspended by the wall of that unostentatious dwelling. From some of these she had taught the lad to read; and they still continued dear to him, as the mother's legacy to her visionary boy.

Yes, Stanley Mortimer was from his infancy of what is called a visionary turn of mind. He was fond of seclusion and solitude, his walks were lonely, and he loved to wander in the unfrequented places of the fields and hedgerows. Many a gleam of running water, like a sunbeam in the ground, had he detected, where the wild rose and the briar grew wildest and thorniest. Often, too, the errant branch of some eccentric elm would form a sort of rude impromptu bridge over an unnoted runnel of water, on whose uncertain footing it would be the boy's pride to venture an unexpected transition from the trodden ways into the unpathed fields, where, though to tread was to trespass, there was none to warn the intruder. Here and there, too, the stream, fretting a channel, would meet with impediment, and so construct the minute image of a waterfall that gave the most distant idea possible of Niagara; yet was it potent with the fancy, and fascinated the opening mind like Lord Byron's description of the Falls of Velino. Then, too, the vision of wild flowers and buttercups, of bud and blossom, around, beneath, and above, made the common fields a paradise to a fancy predisposed to enjoyment, an intelligence unprovided with better and undesirous of other objects.

Nature, in fact, both in her humblest and highest aspects, is suggestive. In this she observes the true law that should govern a work of art. Her less things conduct the imagination to the greater, and her greatest still lead us on to guess at the infinite.

Simple nutriment like this sufficed for the time the nascent or, at best, infant mind. Stronger meat might be needed in its manlier epoch; but the pure milk of nature, in her most domestic mood, nourished and warmed the maturing boy, whom inexperience of the world had yet left almost a child.

In this most unexciting of all modes of living, Stanley Mortimer found the greatest excitement, whilst other boys in the village found none. One of them was an idiot; and the rest, with a single exception, were such dullards as clods of the valley usually are. But then one and all wanted that background to their experience which Stanley Mortimer had the good fortune to enjoy. What was that? A small store of books left on the cottage shelves by his dear mother.

Happily, the books, though few, were all good. Never was a more select assemblage: there was Spenser's "Faery Queen," and Milton's poems, with the Bible; also, strangely enough, a copy of Marlowe's "Hero and Leander," Chamberlayne's "Pharonnida," and Shakspeare's poems and sonnets, but not his divine dramas, together with Fairfax's translation of Tasso, and Chapman's Homer. Truly, a singular collection; and for the materials to serve as the groundwork in building up and educating an individual mind, such as would scarcely have been provided by the schoolmaster, abroad or at home, yet calculated to impart both strength and ease to an active intellect.

By these in secret were various faculties awakened—wonder, admiration, love, curiosity, hope, fancy, faith, imagination, pure intellect, and the ideal reason. Taste was generated by the wizard touch of genius. Stanley Mortimer carried with him into the fields the feelings with which he was inspired in the closet by these sacred volumes. Thus to him was the common meadow so much enchanted land; and wayside objects, no longer trivial, acquired an importance that made them look like angel visitants to an earth where they were strangers.

Vain it would be to charge on these emotions; the only singularity in the present case, if one indeed it were, consisted in their being connected with ordinary scenes and events. It was not that to Stanley Mortimer "high mountains were a feeling;" but that even the modest and level pasture was a passion. Not that he rhapsodised on its charms; for scarcely is that the most creative genius which expatiates on nature's beauties, but that which utters most melodiously the inner sentiments of the human spirit. Let the poet speak but one word significant of these, and we at once acknowledge his credentials. He knows

A visitation like this gives sudden interest and animation to a rural village. Character and importance supervene at once upon the still life of the scene. The burley coachman, well wrapt up and defended from the weather, no longer seated on the coach-box, treads the earth like a Monarch descended from his throne, but still wielding his whip for a sceptre; while the ostler, ascending to the roof of the vehicle, busies himself with the luggage, an object of anxiety to the outside passenger, whose interference, nevertheless, in his temporary pride of place, he is almost disposed to question. Movements such as these, however, scarcely attracted the attention of the persons of our story. Yet, whatever were the feelings of pleasure attending this meeting, they were attested by no extravagant demonstrations. Simple greetings and simple inquiries, with a gentle pressure of the hand, satisfied all three. Side by side they walked down the lane, and were silent until they had entered the woodbine cottage. Dinner was soon prepared and despatched; and, while the moody merchant diverted himself with his favourite pipe, Stanley and Alice took a walk into the village.

For a considerable while, Alice, always reserved, was mute; and Stanley, agitated by different feelings, felt himself at a loss for a topic. But when he began to speak his discourse soon had reference to his books, and his language had a flow and a learned argument which, transcending the limits of her habitual thinking, had the effect of making Alice still more reserved than before. But, while she wondered at her companion, she was more puzzled than pleased.

That brief walk over, they returned in ample time for the tea, which, after dinner, promotes so well both the purposes of digestion and of conversation.

"Where have you been?" asked Mr. Mortimer, "and what did Stanley say to you?" he continued, addressing the question to Alice.

"I cannot tell," said the young lady, blushing; "but it was all about his books."

"Books?" exclaimed Mr. Mortimer. "How did he find books in this place?"

"Oh, Sir," said Susan Gilbert (that was the name of his foster-nurse), "the dear boy has always been fond of reading the books that his poor mother left, and which you have never removed."

"*Her* books?"

And as he spake, a cloud came o'er the merchant's countenance; but soon a tear glistened in his eye. The angry cloud was dissolved in the more tender symbol of feeling; a cluster of small orbs of perfect crystal, each of which was worth all the planets. "Her books? Ay; but there is something to do in the world besides reading books. Those books? No, no, my dear Stanley, you must henceforth learn to read the order-book, the cash-book, and the ledger. I must have you taught how. You are now old enough to try business. Wherefore, at the month's end, I shall take you with me to the City, and there brush off the cobwebs which reading has no doubt infested your mind with. In the counting-house you must not look at a book—that is, beyond those I have mentioned."

The full force of these words was unintelligible to Stanley. They promised to him an acquisition of knowledge; what threatening, too, they implied, his experience had not instructed him to appreciate.

The incidents of this prescribed month were few, and apparently insignificant.

Day by day Mr Mortimer amused himself with the garden, his meals, and his pipe; seldom venturing out into the green lanes or the fields, being willing rather to bound in, as it would seem, than to expand his mind. He loved to walk in a contracted space, and to recognise the infinite beyond the narrowest limits. Out of that small circle, all was voluntary ignorance; within it, the old man was the central, self-sufficient point; the all-important, one, sole will; the motive power and vital spring of a peculiar universe.

Day by day Stanley and Alice, generally accompanied by Susan, strolled into the road or the byway; into the village, up the hill, adown the vale, or along the winding walks by the river; but still her words were few, while his were many. Notwithstanding the fluency of his speech, however, his manner was bashful and awkward. He seemed afraid sometimes, nay, often, to offer his arm, and frequently would resign her altogether to Susan's conversation, while he sauntered apart, wrapt in apparent meditation.

But it was not that his mind was then absent from his companions; on the contrary, Stanley was suffering the acutest misery from their supposed neglect; at least from the neglect of one. Was this the pang of jealous or despised love? He could not tell. His heart was perplexed, his mind confused.

How, too, was it with her? Naturally reserved, she became embarrassed, peevish a little, and wore a mortified air of offended condescension. Had Susan been qualified for such an office she might have interpreted their feelings for them, and said, "You are in love. Why not confess to one another?" Had she so said she might have caused to be uttered the words that were doubtless trembling on the lips of both.

As it was, the answer of Alice to Mr. Mortimer was the same on the last day as on the first.

"Well, what has Stanley talked to you about all this while?"

"I cannot tell; but it was all about his books."

Some of these books, too, on an evening, he was in the habit of reading to her—sometimes in one, and sometimes in the other—selecting beautiful passages. Somehow Alice did not cordially sympathise with these. Perhaps she would rather have heard him talk; perhaps, also, on themes more personal.

Stanley was as little satisfied as Alice with himself. Contrary sentiments struggled within him. If he really loved, why not give utterance to his passion? Was it want of courage? Was it delicacy?

One incident might seem to have put an end to this state of doubt. On the very day previous to their departure for London, the bonnet and shawl of Alice had been accidentally placed by Susan on Stanley's bed. Shortly afterwards, entering the chamber, they were observed by Stanley. With a sudden impulse he seized on them, and, pressing them to his lips, kissed them twice or thrice, fervently and reverently. Was this not the action of a man in love? Yet, up to the very moment of departure, Stanley spake not to Alice on any other than the ordinary topics. His feelings, perhaps, lay too deep for words.

Whether, if, instead of travelling by the coach together, Stanley had been left behind, and consequently had had to take a formal farewell of Alice, those feelings would have found words, we dare not say. As it was, he simply saw her safe home; and, when leaving her in the custody of her parents, felt that he likewise had now become a resident of London, and therefore might visit her readily when he should be so disposed. Besides, his father was of the party, and the whole proceeding had the most business air imaginable.

PART II.

The counting-house was not so pleasant a scene of occupation as the village greensward. There were no longer the running stream and the blue sky to contemplate. And for his chamber in the cottage, Stanley Mortimer had now a smaller room, with fewer books—those three, chiefly, with which he was threatened—to which might be added the banker's account and the street directory.

At first these new studies displeased him not; on the contrary, he was rather attracted by their novelty. Besides, his reading had made his mind diligent, and filled it with an honourable ambition. Hence he was ready to encounter difficulties manfully. He rejoiced in mental discipline, and the secret ardour with which poetry had fired his soul only made him enter with more zeal into a new pursuit. The figures of arithmetic were to him as pregnant as those of speech; and a bill of parcels proved little inferior to Homer's catalogue of ships.

It is a mistake to suppose that literature, or the love of it, in any of its forms, incapacitates for business. Well would it have been for Stanley had Mr. Mortimer thought so; their minds might then have sympathised and instructed each other. As it was, they dwelt apart. Stanley was left in the counting-house, as he had been in the country, to form his own mind as he might.

It is true, a somewhat enlarged experience dawned on him. One special source of instruction was opened: it was his delight on Sundays to hear the great preachers of the metropolis. He wandered from church to church, and feasted his ears with the different forms of eloquence. Probably, on week-days, the theatres and concert-rooms would have been visited, but these were places interdicted by his father, who insisted, also, on his evenings being passed at home. While the one enjoyed his pipe, the other studied his book.

Frequently did Mr. Mortimer complain of the bad fellowship of this; but submission was unavoidable. He recognised the mother's failing in her boy, and a tender memory reconciled him to what he felt to be a hardship

Meanwhile, the sphere of Stanley's information was daily augmented. The market, the newspaper, magazine, review, and the new work from the library, all aided to form the mind which the idealities of country studies had originally stimulated.

And Alice——yes, of Alice something, though little, but that little how significant, must be said. Occasionally, on a Sunday evening, but far from often, Stanley visited her parents—visited her parents, I say, not *her*, for the fact was strictly so. He loved to talk in her presence; but seldom, and this was partly owing to her own taciturnity, engaged in specific conversation with her. When left alone, it would frequently happen that they would sit entirely silent. Their feelings towards each other were more tender and respectful; but the opportunity of being familiar seemed to dispense with the necessity of explanation. Fatal mistake; an error too often committed by meditative minds—the one fault of the reflective Hamlets in all ages, causing delay in action, and leaving the solution to a crisis, which timely decision would have prevented. That blunder, worse than a crime, both in individuals and in nations, is the fatal source of revolutions, the violence of which might have been tempered by predetermination and active forecast.

It must not be omitted, however, to state, in explanation of their feelings, and by way of apology for their conduct, that both had made a discovery. Alice had discovered that her intellect and information were unequal to Stanley's; and Stanley had also discovered that Alice was not so well educated as himself: nay, that she was deficient in the very rudiments of instruction. Like most of her immediate neighbours, Alice mispronounced the letters "a" and "w," and on such words as "envy" misplaced the accent. The latter he, for some time, reconciled by the examples of Spenser's rhymes, but soon found that, in Alice's case, the peculiarity was due to ignorance, not to poetic association. As his ear became more and more cultivated by the oratory of the pulpit and the conversation of well-instructed men, such peculiarities became more and more unpleasing, and ultimately intolerable Once or twice he pointed out these errors, but found his remark had offended, its importance not being appreciated. A certain amount of knowledge is needed to understand the value of more, and that previous conditionary knowledge poor Alice had not acquired. What a lesson it is to learn, that ignorance cann ever afford to be proud! As we are all, more or less, necessarily ignorant, the lesson is of universal application. In all of us, our pride is in exact proportion to our ignorance.

> Man, *proud* man,
> Dress'd in a little brief authority;
> Most *ignorant* of what he's most assured,
> His glassy essence, [illegible]
> Plays such fantastic tricks before high heaven,
> As make the angels weep; who, with our spleens
> Would all themselves laugh mortal.

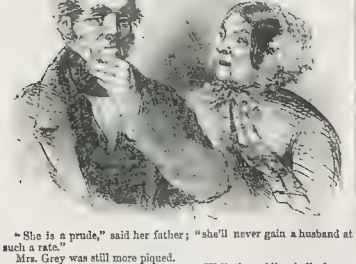
This discovery was not without its effect on the mind of both. It naturally aggravated Stanley's hesitation. As his acquaintance increased, he met, too, with other ladies who had been better nurtured, were more communicative, and who pronounced their words properly. All this was to the disadvantage of Alice. Nevertheless, Stanley's fidelity was not effected by it. His unexpressed passion (if so strong a term be the right one) still remained faithful to its object; his implied attachment, at any rate, prevented his forming any similar relations with either of the more accomplished damsels to whom we have alluded. But this state of things had nothing to induce him to hasten any explicit declaration. It was obviously rather a motive for delay.

But this delay at last irritated Alice. Her parents, too, began to get displeased with it. Never frequent, his calls seemed now to be seldomer; however, he had given to no one the right to complain.

"Why," said Mrs. Grey, "if Mr. Stanley has any thoughts of Alice, why does not the man propose?"

"Because," said Mr. Grey. "Alice gives him no encouragement."

The mother was piqued at this, but she confessed that Alice was too reserved, too silent.



"She is a prude," said her father; "she'll never gain a husband at such a rate."

Mrs. Grey was still more piqued.

"Prude, is she?" said the old lady. "Well, then, Alice shall change characters for once, and try the coquette."

And the old lady set about her plan as soon as she had conceived it. All the arrangements were at once made in her mind, and nothing remained but to exhibit them, as Mr. Thomas Carlyle would say, in space. This was soon accomplished, for the creatrix was skilful in her work.

Alice, of course, had her admirers. Of these "a nice young man," named Alfred Kennett, was the most assiduous in his attentions. There was no mistaking his *penchant*, for, unlike Stanley, he had more than once spoken out, and had received merely equivocal *discouragement*. A slight alteration in conduct would suffice to change this into equivocal *encouragement*. The means were easy, and were immediately adopted. After two or three visits, the young gentleman thought that he had reason to consider himself as, at any rate, *tacitly* accepted.

Now was the time for Mrs. Grey's plan. It was Christmas, and the festival of Christmas-day was her chosen opportunity. To feasting at that high tide and the revels attending she determined to invite Mr. Kennett and his parents, as well as Mr Stanley and his father. Her purpose in so doing was to bring the rivals into contact, and watch the effect. She was careful to hint to Mr. Mortimer that the young man was a suitor to Miss Alice, though not an accepted one; and he was as careful to communicate the secret (which, of course, was meant to travel) to his son. Nevertheless, the old man was nettled at the incident, and so far as he was concerned, at least, it made an unfavourable impression. Stanley, on the other hand, felt troubled, but he resolved not to show it.

Mr. Alfred Kennett was, as we have said, "a nice young man." He was a pattern of trading respectability. His attire was trim, genteel, and new; his manners were attentive and modest. He was not without intelligence, and his conversation was sensible, though not copious. Stanley viewed him with interest. Had he not been previously warned of the cause, he might have resisted his solicitous politeness towards Alice; but, thus precautioned, he recognised in him a sort of privilege with which he was far too honourable to interfere.

Accordingly, when, as usual, Alice took her seat by the pianoforte, instead of hovering close by her chair and watching the motion of her

fingers, as he had been wont to do, Stanley stood at a distance engaged in conversation. Not that he felt indifference, or affected it; but as if he had no right to be pleased or displeased—such was the state of his mind, one as anomalous as the occasion that induced it.

Poor old Mrs. Grey! she soon discovered that she had committed an error; but she, too, found means of suppressing her feelings, and bustled through the evening with apparent complacency.

But the next day brought reflection. To-morrow and to-morrow! We are all wise then; none of us to-day. Our after thoughts are exceedingly prudent, but the prudence has arrived too late.

Alice suffered much chagrin and disappointment. Tutored by her mother, she had made sure that Stanley would show, by his manner at least, that she was not indifferent to him. She now had reason to believe that she was utterly so. Means of retaliation were in her power; she retained a lover, at all events. Nor was the youth ineligible; also, his conduct during the evening had been altogether such as became both his and her position in life. Nothing had occurred either to place him at disadvantage. Stanley might easily have outshone him had he taken the pains, but he made no attempt to shine at all. Nevertheless, the simplest thing said by Stanley without effort was beyond all comparison more important than the gravest remark made by Kennett. Not only the form but the stuff of their discourse was different; both in manner and matter they were contrastable only, not comparable. The contrast, too, would, doubtless, have been greater had they conversed together, but they did not. They merely exchanged civilities; yet in this affair of ordinary intercourse one showed as the prince, one as the peasant. Such is the distinction between minds; also, that in their cultures—not always to be described, but invariably to be felt.

No, no. Alice could not exchange Stanley Mortimer for Alfred Kennett. A few days, and the latter was dismissed.

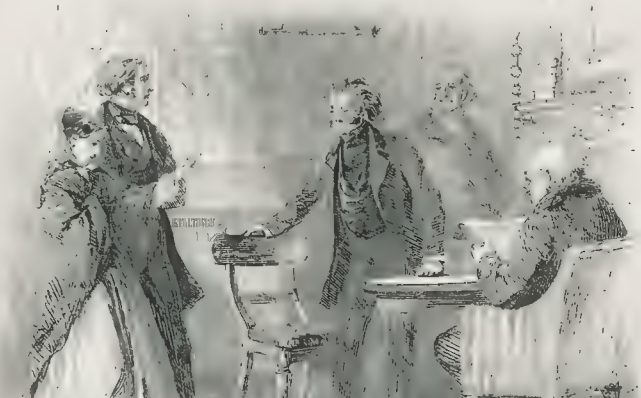
A few days, and Stanley Mortimer was found in more earnest conversation than usual with a Miss Adelaide Travers, the daughter of a respectable merchant, a young lady of much intellect and some education. She was, at any rate, ready to talk, and had a variety of school themes on which she could discourse even learnedly. Stanley yielded himself to the fascination of her company and the moreality, since he now esteemed himself perfectly released from all obligation to Alice. Was he not even a rejected lover? Rejected, but without the privilege of complaint [illegible] love, the courtship, and the rejection, all obeyed the same law—the law of silence. Be it so. The sense of freedom had in it a sense of joy—and the novelty of conversing with such a person as Miss Travers completed the charm.

Alice, like *Rosaline* in the play, had only prepared the heart of our *Romeo* for this new *Juliet*. It was now ripe, and ready for any tender impression. It was now experienced, too, in some of its own workings, and it now understood its oracular suggestions better than heretofore. An interchange of sentiments had, moreover, been effected; and a mutual delight realised in the sound of each other's voices. They told one another what they knew; ere long, they described also what they felt. In short, the gentleman proposed, and the lady accepted.

It was not long before Alice was made aware of the fact. The shock it was to her might, however, not be calculated in so undemonstrative a person. Her sorrow was dumb. She shed no tear—she heaved no sigh; but, quietly as before, went through the day; and when she met Stanley her manner was the same as ever.

It was not until after his acceptance by Miss Travers that Stanley heard of Alice having dismissed Mr. Kennett. This somehow gave him a pang; but it was too late to reflect. His word had been passed, and the unspoken must yield to the spoken love.

Owing to his father's circumstances, Stanley's marriage with Miss Travers was delayed for two years. This procrastination was willingly conceded by the lady; perhaps, however, it might have kindled hope in the bosom of Alice. One thing was clear, that she now resorted in her solitude to the study of books. She began to lay the circulating library under contribution. Gradually, too, she developed a taste for society, and seemed to have a purpose in it. She sought to be a member of as many gay parties as possible. But what might be her motive



THE INTRODUCTION TO THE LUNATIC ASYLUM.

for this change of mind and mood she never mentioned to any one, or even alluded to it in the remotest manner.

"Ah!" said Mrs. Grey, "our Alice is indeed a mystery!"

PART III.

Years passed. Mr. and Mrs. Stanley Mortimer lived a steady and domestic life; one, too, that seemed happy to themselves and others. A shadow, perhaps, would cross Stanley's mind when he thought of Alice; but this was seldom. His mind was progressive—looked rather to the future than to the past. His personal improvement was rapid, and during his early years his wife sympathised with his opinions and his pursuits.

After marriage, the care of a family limits the range of a woman's acquisitions. Mrs. Mortimer had no leisure to extend hers; while her occupations had the effect of leaving her husband at leisure in the evenings, of which he took advantage to further cultivate his taste and understanding. He read philosophy, poetry, the drama; nor was he without considerable knowledge of science. In a word, his information was far in advance, and his wife was no longer in the same mental relation with him as formerly. Habits of solitude gradually grew upon him, until he felt himself to be alone and living like a star apart.

This ever is the destiny of the highest merit. It is a painful destiny. It is the rock of Prometheus and of Napoleon. The world to such is populous in vain—they hear the noise as of billows far beneath; the station they occupy has no room but for one; in sublime loneliness and self-communion, they breathe air too pure for the gross multitude, nay, even for the few, however near and dear; till, at length, in the aristocracy of their virtue, they become, like *Coriolanus*, compelled to feel and to act,

> As if a man were author of himself,
> And knew no other kin.

Even such an isolated position was that of Stanley Mortimer. Philosophy, however, had made Stanley master of himself, and therefore of all circumstances. Whatever demons-regnant might rule, and however demonly they might govern, he preserved the secret which kept him serene. He had learned that the worshipper of the Ideal must never idolize the image; that, while the sense of the Beautiful grew in his own mind to the Perfect, the shadow of it in the created object evermore tended to decay and dissolution. With no Festus-like inconstancy, therefore, did he seek after new types of the lovelike, knowing that all were alike unsatisfactory; but maintained his fidelity, notwithstanding some strong temptations, to the heart in whose beatings he had recognised the first undoubted response to his own.

The first *undoubted* response! But not the first, which, perhaps, after all, should not have been doubted. I have said that this thought did not often visit Stanley Mortimer; but when it did, there was a sting in his conscience the anguish of which time could scarcely mitigate.

At length news reached him of Alice. Her parents had died, and she continued unmarried. Her life was lonely; and so had introverted meditation worked upon her, that her conduct had become eccentric—in a word, she was lunatic, and needed counsel and help. Distant as was Stanley's relationship to her, he was nearly the only one eligible to be appealed to in such a conjuncture. He hastened to his duty, and then became aware of some facts which caused him to reflect deeply.

Without entering into the particulars of her case, suffice it to add that it was considered expedient that Alice should be placed in a secure asylum, in order, if possible, to her recovery.

It was the lot of Stanley to accompany poor Alice to the proper institution. Never, to him, was a moment of greater excitement: at the asylum itself, never one of less. The case of Alice was with them an ordinary form of mental aberration. The new visitors were at once, and without ceremony, introduced into the receiving-room. Three gentlemen there were seated at a table. One the presumed proprietor of the establishment, reading the newspaper intently—him nothing appeared to have power to stir from his occupation. He took no notice at all either of the patient or her companion. What a contrast his indifference, to Stanley's awakened sense of consciousness! The other two rose—one maintaining an erect posture, with his hands behind him, superciliously contemplating aside the entering strangers; the other bending forward to them complaisantly, and welcoming the inmate within the walls. A business air of sympathy sat on his features, which ill responded to Stanley's feelings. Such, however, were the hands into which, perforce, he confided the person of Alice.

Having performed this painful duty, Stanley returned to the former residence of Alice, that he might place her effects in safe custody. In doing this he found some books and papers which excited his curiosity and surprise. One of them was the only copy of verses ever written by himself—a lyric, in which he told the passion of a silent love, and for which he had addressed thus: "To ——." Alice had filled up the blank with her own name. How she had gained possession of the manuscript, Stanley knew not. All that he recollected was, that he had written the stanzas, and then had mysteriously lost them.

The thrill that ran through his frame on this discovery may be imagined by the sensitive; it touched him to trembling and to tears!

Nor was this all. There were other touching signs of his influence, not only on the mind but on the heart of Alice. There were a few books which bore marks of study—such as Pope's "Homer" and Dryden's "Virgil;" and two or three others which nobody would have suspected Alice of even reading. There were pencil-marks and occasional marginal notes, proving that she had also read them with diligence and care.

Nor had this evident study been without results. A copybook or two turned up in the handwriting of Alice. It contained verses of her own composition. They breathed of love and passion, but more in hope than disappointment; the love being too living, not still to believe, not still to hope, despite the rebukes of experience. Alice had evidently in her loneliness cultivated an inner world, brooding on which had placed her in contradiction with the outer, and produced those irregularities of conduct for which she was now a prisoner with the insane.

The tale I tell is over true, and so was the conviction with the agony which burned its way into the conscience of Stanley Mortimer.

When first Stanley knew Alice, she was mute with natural diffidence and comparative ignorance. Contact with him, notwithstanding all appearances to the contrary, had filled her with the desire of knowledge. This she had pursued under serious difficulties. Her limited circle had not afforded the means of her forming a correct pronunciation. Her local peculiarities in this respect had disgusted a too sensitive ear. The consequences need not be repeated. Stanley Mortimer now reflected on all.

"Has," said the self-questioner, "has the blame been mine; or, rather, is it not due to society? Here has been a young and virtuous maiden, brought up by parents having a competence, and moving among the respectabilities of middle-class life, who, nevertheless, was shut out during her prime from instruction that she might have possessed when a child. Might, do I say? *Ought* she not to have possessed it? Ah! this evil grows from our low-thoughted views of education. For many years Englishmen refused to give the most meagre knowledge of reading, writing, and arithmetic to the masses. That being at length conceded, Englishmen insisted that education should be fitted to the station of the individual. The station of the individual? Why, in a state of society like ours, and with the facilities which the British Constitution gives for the ambitious to rise, who can tell what is the real station of the individual? Is it that in which he is, or that to which he tends? The cottager's infant in the cradle may become the Lord Chancellor on the woolsack! Should unnecessary difficulties in the shape of removable ignorance be thrown in the way of such a result? That, truly, for too long a while has been the theory. Would that the minds of the powerful would awaken to a more just perception! A plenary education for all classes of the people undoubtedly should be provided by the State; and thereby each individual be empowered to start fairly in the race of competition. Ah! but my thoughts are wandering from poor, poor Alice."

He paused a little, and then resumed:—

"Poor Alice! that the world's spirit of unfairness should intrude into the sanctuary of the inner feelings, and intermeddle with the delicate reciprocities of love! Fitted to your supposed station was the instruction accorded to your infant years by your parents, who never conceived the slightest censure as applicable to their conduct; for they loved you dearly, and were dearly loved by you. The error lay in the state of public opinion. The darling hope of your life was frustrated by one unconscious fault. Oh, would that my own mind, like yours neglected, had not, by its own energy, outstripped yours! But this is folly."

Again he paused, and again resumed:—

"Would that I had known, however, that your mind, my beloved Alice, had been progressive. Oh! these records prove that there was vital growth in it. Had I but known that! Now, perhaps, instead of revolving about one idea until it has made itself giddy, it might have been advancing in a right line, under my direction. It might have continued to advance with mine; not educated, as some are, to a standstill point. Peha! let me not make bitter my own lot by over-refinement. Adelaide is a like victim; and it requires mutual charity to make even the odds of a chance-medley state of things—such, unfortunately, as the present anomalous social position of the middle class in England. See, for instance, what has been made of educating children according to their arbitrarily-supposed station. So low, very lately, was the general condition of school-teaching, that, on attention being directed to the subject, it was found that the most elementary instruction at national and mechanics' institutes placed immediately the children of the workman in advance of the children of the shopkeeper. To restore their relative position, a London University was then projected. Well-intended as this institution is, there are millions of respectable families who cannot avail themselves of its advantages. No, no! Nothing will meet the want under which the majority suffer but a universal system of plenary instruction for all classes of the people, established by authority, and made imperative on local functionaries. Only in this manner may an evil so extensive be effectively met. Such a system once established, we should have none to blame but great Nature herself for the differences not only in our destiny but our disposition. And to her decrees we must all bow in reverence."

Such were the just but painful reflections of Stanley Mortimer. The evil which thus blocks up the public thoroughfares through which mind has to make its way penetrates into the private chamber, and turns the lares on the domestic hearth into furies. It is for society to reduce the inequalities of nature and fortune, and not to aggravate the injustice of either. Whatever prejudice may yet exist in some minds against the plenary education of all classes of the people, the wrong done by the omission of the duty to those who might otherwise be a blessing to themselves and to others stamps it as a national sin. But to proceed with our story. A few brief statements will conclude it.

By the aid and advice of the physician, and association with strangers whose discourse ran on matters unconnected with the fancies that peopled the inner world of her ideas, Alice Grey was sufficiently recovered in the tone of her mind to demand and to receive her freedom. She returned to her former lonely habits. For a while she preserved the appearance of sanity; but the worm was at her heart—the undying worm, that, little by little, resumed its power, until the whole was infected with bitterness.

One of the causes which had preserved Stanley Mortimer himself from the vulgarities of his class was his removal, during infancy, from town, and not at too great a distance, where a decided provincialism might be acquired; and another of the causes was his habit of attending the village church on the Sunday. A reader of books, he borrowed his pronunciation from the clergyman, and perused his favourite Spenser and Milton with the accent which he had learned from the pulpit. As wish, indeed, had come over him to enter the Church; and, but for the reluctance of his father, that wish would doubtless have been fulfilled. He had more than once told Alice of his desire; and it would seem that her imagination had become impressed with this circumstance. She had preferred Stanley to herself as a clergyman; and, now that he was lost to her, she began in the persons of the clergy to see him. Like the "daft woman" who followed Dr. Chalmers, poor Alice selected now one and now the other of her favourite preachers, on whom she bestowed her attentions. At last, to preserve a popular minister from her annoyance, it was necessary that authority should interfere, and that she should be placed under proper guardianship. The life of poor Alice had been all illusion; and this was the last.

As to Stanley Mortimer, he sought refuge in the stronghold of philosophy. Much he loved his wife; but he felt how much more he should have loved had she been his *first* love. Love was now with him a relative, it had then been an absolute, affection. It would have lived and grown in his soul a pure and simple identity; it would have done so, or he thought it would. His aim was now to acquire that absolute knowledge which he had lost in love. Vain effort! yet, if we may believe in Rabbinical mythology, such as the arabian even make, are the seraphim are dispensed from. The latter, by loving, know all things; the former, by knowing all things, would learn to love. Labour infinite; while love, by a spontaneous birth, springs at once into being and perfection.

Of these mysterious words Stanley Mortimer knew, because he felt, the meaning fully. In philosophy he trusted he might accomplish that union of Love and Wisdom suggested by its etymology. But the pursuit cost him society. More and more he became a recluse—less and less fitted for the world, and the world for him. Like Alice, he lived in solitude, companioned with his thoughts, and one fixed idea, that formed the centre of their revolutions.

THREE KINGS OF THE EAST.

AN ODE.

I. Strophe.

Star of the East! O star of birth!
Illumine Heaven and shine on earth!
Let Kings bow down before the Child,
The mighty to the undefiled;
His brow, uncrown'd, is more sublime
Than theirs. Unconscious of crime;
Theirs darken'd with the shade of sin,
And his untroubled from within;
The coronal of innocence
His forehead swathes, unseen by sense.
Offspring of Time, too long conceal'd,
Late from Eternity reveal'd!

II. Antistrophe.

Mother of Love! revere thy Son,
The Wonderful, the Sacred One—
Those sov'reign sages from his eyes
Gain knowledge and become more wise.
A power flows to theirs from his,
To note invisibilities.
Thy soul with all its virgin truth,
And his in its immortal youth:
And Heaven's decrees, its mystic plan,
That suffering perfects godlike man.
Oh! creed of sadness!—Mother mild,
Thou weep'st while worshipping thy Child.

III. Epode.

And ye,
The adoring and the royal three!
Ye Orient Kings, with generous pride,
Who proffer gifts as to your lord,
And homage thus the deified,
By shepherds and by you adored—
Led by his star, ye came from far,
The hopeful, faithful, and the loving:
Such ever read the Heavens, and they
For ever in the starry way,
See bright prophetic planets moving;
New worlds discover; each a soul,
A truth, midst other truths to roll,
Maintaining still the harmony.
The crescent music of the sky,
Which still to their attentive ears
Reveals the secret of the spheres.

A.

HOME MYTHOLOGY.

CHRISTMAS CAROLS.

BY WILLIAM T. MONCRIEFF.

ILLUSTRATED BY PHIZ

DOMESTIC SUPERSTITIONS.

Bring the yule-log—feed high the flame—
Gather around the cheerful fire,
And let old superstitions claim
A passing thought ere they expire.
The fairies were a merry set,
Working their spells to aid, to bless,
And to the sad heart dearer yet,
Ever for mirth and cheerfulness!
A song, a song, ere yet too late;
Let youth and mirth this festive time
In sportive frolic dedicate.
Let others raise the loftier rhyme,
Still Home Mythology to thee
A simple song shall offered be.

I.—CAROL OF THE CAT.

Purring, purring, purring, with a soothing dreamy sound,
And half-closed eyes, thou singest as in ecstasy profound.
For joy and rest thy songs seem born, a calm and quiet tune;
Like to a gurgling brook, that serenades the listening moon.
I love thy soft, thy drowsy song, it ever gives me glee,
And Pussy, in return, I'll dedicate a song to thee,
And all to which thy acts are signs from mighty Pharaoh's reign.
Then pur, and pur, and pur, and pur, and pur, and pur again;
Purring, purring, purring, with a soft and dreamy sound,
And half-closed eyes, before the fire, in ecstasy profound.

Thou washest o'er thy left ear. Ah! to-morrow there'll be rain,
And I have promised with my love to rove o'er hill and plain.
Oh, naughty Pussy, why that sign? thou'rt in an angry mood.
Thou sneezest! that an omen is that never comes to good.
A cold throughout the house there'll be—a cold, yes, Puss, a cold.
Thou scratchest, too, my table's legs. Well, that should bring me gold.
'Tis better than the miser who some dunghill rakes for pelf,
Ah! thou leap'st upon my lap! that shows thou lov'st me for myself.
Purring, purring, purring, with a soft and dreamy sound,
And half-closed eyes, before the fire, in ecstasy profound.

Oh, pretty Puss! oh, gentle Puss! pur on, pur on, pur on;
I'll pat and smooth thy velvet coat if thou, my lovely one
(Lest eve when out the candle went by chance), wilt not remark
Whose lips were kiss'd, for well I know thou canst see in the dark.
'Tis no disloyal thing I ask, though there was no one nigh.
I know, though I was sovereign then, I can't thy silence buy.
Thou saw'st the kiss he stole, as low he spoke about the ring;
Proud as I was, for, Pussy, thou may'st look upon a King,
Purring, purring, purring, with a soft and dreamy sound,
And half-closed eyes, before the fire, as if in bliss profound.

II.—THE STRANGER ON THE BARS.

[Many fanciful indications are gathered from the appearance of that airy visitant commonly termed "a stranger on the bars," formed by the action of the fire on the smoke, &c. of the coals. If the flake hangs upon the top bar, it betokens a person of consequence; if on a lower bar, his position in life is proportionably decreased, and the expectation consequently lessened. If the flake is of an entire form, without any rent or jag about it, it betokens the stranger will be free from any defect or infirmity: and from the fire burning bright or looking gloomy, a fair conclusion, it is supposed, may be drawn as to whether the stranger will bring joy or sorrow. Should the coals suddenly burst into a sulphurous or gaseous flame, it is supposed the stranger is military and of an ardent temperament: with a thousand other learn-ed and fanciful follies. It is usual for young girls, &c., to clap their hands before the filmy flakes, calculating the time the stranger may be supposed to arrive from their falling off the bar. Dark, fragile, and uncertain as they are, it must not be wondered at that these filmy flakes should have been pressed into the service of fireside superstition.]

There's a Stranger on the Bars! which are breathing smoke and fire,
So he's coming from the wars. What's his rank? It can't be higher;
He's on the topmost bar, lightly dancing to my view,
All compact. He has no scar. Ah! my heart is dancing too.
Tall in stature; not too thin. How I love a son of Mars!
Born for victory, still they win. There's a Stranger on the Bars!
Will he bring me joy or sorrow? Will he wake the tear or sigh?
Will he come to-day? to-morrow? Let me clap my hands and try.
Will you come to-day? 'Tis Sunday. [*Claps hands.*] Though I kneel,
vain I command.
Let me try again. On Monday? [*Claps again.*] Ah! he yields him
to my hand.
To my breast he makes a dart. Clear the fire! I bless my stars—
With love's flame he'll cheer my heart. There's a Stranger on the Bars!

III.—FORTUNE IN THE TEA-CUP.

'Tis empty, 'tis empty, I've drain'd the last sup,
Let me try now the power of the crucible cup;
I have put in the sugar, the type of life's joy—
I have pour'd in the cream, peace that never can cloy.
I have put in the black and I've put in the green,
With refreshment and vigour to gladden the scene,
With mystical warmth all their virtues expressing
In the dregs reading grounds of misfortune or blessing,
Too pleased, should but hope, while the cup I twirl round,
As in Pandora's box, at the bottom be found.
Turn the cup, turn the cup, it our fate will reveal,
Once more, turn again, for thus turns fortune's wheel.
Turn the cup, turn the cup.

Turn it round, turn it round, it will quickly be seen,
By the dregs, if life's aspect looks dark or serene—
Is mix'd or unmix'd, is confused or is clear.
Ah, those leaves close together! then danger is near.
A ring, house, and cradle; young ove should beware.
A drop in the cup! Is it comfort or care?
Hold! I see a clear path—it winds through a dark wood;
No stalks cross its progress—it promises good.
All's unravell'd—smooth, fair nought betokens annoy
What is this? it is clearly a purse. Oh, what joy!
Turn the cup, turn the cup, it your fate will reveal;
Once more turn again, for thus turns fortune's wheel.
Turn the cup, turn the cup.

IV.—SNUFFING OUT THE CANDLE.

[Accidentally to snuff out the candle, is an omen that the party so unluckily extinguishing the flame will not be married during the current year. If a spark should be left in the snuffed-out wick, and the party can re-kindle the flame by

blowing on it, the omen may be averted. The candle as an obvious emblem of mortality has in all ages been a great agent in the hands of superstition; witness the winding-sheet, the Welsh corpse candles, &c.

Oh dear! I've the candle snuff'd out,
And my heart's overpower'd with fear;
For I really begin now to doubt
Whether I shall be married this year.
Love may go out, or cease to burn bright,
'Tis a positive omen, oh dear!
Young Hymen his torch may not light,
And I may not be married this year:
No, for young Hymen's torch there's no light.
And I may not be married this year.

But the flame in a breath that may die,
A breath may again make appear;
There's a spark, so my fortune I'll try,
For I long to be married this year.
A rude breath my hope might destroy;
Blow softly, blow soft—Oh, what fear!—(*blows*)
It beams brighter—(*blows again*)—it lights: oh, what joy!
Yes, I now shall be married this year.
It beams brighter—it lights—oh, what joy!
Yes, I now shall be married this year.

V.—THE FEW MOON.

[Classic lore has delighted in giving the Moon celestial power, assigning it a place in its pantheon under the name of Diana, Luna, &c. Its monthly changes, its influence on the tides, &c., are less mysterious than the power it exercises over the reason of mortals. Within two or three years a magazine was written and printed by the patients of a lunatic asylum in Scotland, and published under the title of the "New Moon." The writer has seen one of its numbers: it is painfully interesting; as imperceptible appear in it the boundaries between reason and insanity.]

Good even, New Moon! lovely Moon! bonny Moon!
Though I see thee but half, ne'er eclipsed be thy beams;
To some thou'rt an evil, to some thou'rt a boon—
To some thou'rt the sweet honey month of Love's dreams,
Bonny Moon, but I must not look at thee through glass,
For there should be nought 'twixt my gaze and the sky.
If I did, a dark cloud o'er thy fair face might pass,
Though calm and resplendent thou ridest on high.
Good e'en, new acquaintance, ne'er change but for good;
In thy praise hark the brook murmurs forth a glad tune:
I hail thee, I welcome thee, Moon, as I should;
I curtsey, I curtsey, to thee, bonny Moon—
Bonny Moon! Bonny Moon!

My money I'll turn, for thou still canst impart
A charm, bonny Moon, as in bright days of old,
A crucible charm, with alchemical art,
That converts lead to silver, turns copper to gold.
Lovely Moon, bonny Moon; ah! so witching thy sway;
We know not if thou'rt sent for good or for bad.
Thy rule the fierce tides of the ocean obey,
But the charm of thy fair face makes thousands go mad.
Good e'en, new acquaintance, ne'er change but for good;
In thy praise hark the brook murmurs forth a glad tune;
I trust thee, I welcome thee, Moon, as I should—
I curtsey, I curtsey, to thee, bonny Moon!
Bonny Moon! Bonny Moon!

Now, New Moon, let me wish, as all should who see thee;
But I'll wish not for pleasures too soon that may pall;
Shall I wish for renown—love—or what shall it be?
No, for something I'll wish that shall purchase them all—
I'll wish—yea, I'll wish, but my wish must be seal'd;
For as I once heard an old village dame say,
No wish will come true that is ever revealed!
Yet, 'tis something most dear; guess it then what you may.
Good e'en, new acquaintance, ne'er change but for good;
In thy praise hark the brook murmurs forth a glad tune.
I hail thee! I welcome thee, Moon, as I should.
I curtsey, I curtsey, to thee, bonny Moon!
Bonny Moon! Bonny Moon!

VI.—CAROL OF THE CRICKET.

[If we extend the fanciful *Rosicrucian* system of Count Gabalis, in peopling the four elements with its peculiar inhabitants, we should in the insect world account the cricket as the salamanders and salamandrines, they being literally creatures that work in the fire. Who has not suddenly heard the song of the cricket, when sitting dreamily in the twilight, and starting as they heard, exclaiming with Shakspeare, "Where should this music be—in the earth or the air?" Leigh Hunt has a very beautiful sonnet on this little insect, whom it not inaptly makes the companion of the grasshopper; and the passage in which Dickens describes the rivalry of the cricket with the louder tea-kettle, must be still fresh in every one's recollection. Before finally parting with the cricket, we should not omit to notice, in reference to the salamandrine qualities of its mate, Dr. Mackay's beautiful poem "The Salamandrine."]

Chirp! chirp! chirp! 'tis the cricket on the hearth,
The herald of sweet comfort, waking thoughts of rest and mirth.
Blest note, though harsh and shrill it sounds, it still to us is dear;
It brings back thoughts of days long gone—of all that then were here—
Of the old familiar faces of our childhood's home once more,
Of the cherish'd social circle time can ne'er again restore;
Though its song may be monotonous, still sweet variety
Lurks in its lively chirp! chirp! chirp!—the fairy horn of glee.
Oh! happy, happy cricket, in thy salamandrine bride—
A mate whose voice is never heard, thyself thou well may'st pride.
Chirp! chirp! chirp!

Chirp! chirp! chirp!—'tis the cricket on the hearth:
Its song is still most welcome of the melodies of earth.
We hail thee, merry cricket, for thou'rt loudest heard at night,
When the circle is assembled, and the log is burning bright.
As the grasshopper in summer—the ripen'd harvest noon—
When the sun is shining brightly, chirrups forth a pleasant tune.
Thou tiniest of ventriloquists, whose starting note at night
Still caused our youthful wonder, as we listened with delight,
Leaping forth from out the centre of the seeming glowing hearth,
In the lapses of the darkness, mingling terror with our mirth.
Chirp! chirp! chirp!

Chirp! chirp! chirp!—'tis the cricket on the hearth:
Our own dear Lar—our household god—to peace still giving birth!
Thou com'st to us with joy and music on thy sounding wings;
Good fortune to the house good housewives know thy coming brings.
Thy chirp is not the voice of death, go ask the watching wife:
She'll say thy voice inspires her through lone hours with thoughts of life.
It luckless is to kill thee, thou darling little thing.
For 'tis but in harmless rivalry thou'dst 'gainst all others sing.
We know thy voice will still be heard till the early morning's light—
A watcher through the lonely hours when we have said "Good night!"
Chirp! chirp! chirp!

VII.—WILL IT BE FINE TO-MORROW; OR, THE CAROL OF THE BAROMETER.

[The weather-wise have been found in all ages and in all classes, among the acute observers of nature and pretenders to superior sagacity, a very numerous class. This natural augury, this orthodox divination, as it is daily called into practice, is not very likely to be easily forgotten. The ingenuity of man has invented weather-glasses, and resorted to science and mechanics for the construction of the barometer, &c.; but amongst our very rudest peasantry will be found human barometers quite as infallible, and to be consulted with quite as much confidence, and trusted to with quite as much certainty. The weather has not been fairly treated; in fact, it is in general very foully treated. Who is there that, gravelled for lack of matter, has not found a friend in the weather? and yet how ungratefully do we use it? We are never satisfied with it: it is either too hot or too cold; still this same weather generally "shapes our ends, rough-hew them as we will."]

Oh, be propitious, gentle skies; be fine, be fine to-morrow!
For I am going out—with whom, and where, why mention here?
And should it chance to be o'ercast, 'twill fill my heart with sorrow.
Yes, every drop of rain that falls will wring from me a tear.
If hollow blows the rising wind, how shall I answering sigh?
If low the glass, how will my heart sink at the sight with sorrow?
But no, I saw the sun set red—the bats, too, blithely fly—
The stars shine bright—it will be fine, it will be fine to-morrow!

If mopes the spaniel on the hearth, my heart will feel as dull—
But lightly flew the gossamer—from that I'll promise borrow—
The cowslip bells were fill'd with dew, with joy my heart was full—
The beetles flew in circling round—it will be fine to-morrow!
No peacocks scream'd, no donkeys bray'd, the moon shines bright and fair,
No gabbling ducks, ne stinging gnats, woke thoughts of future sorrow;
Pass by the fire sat doxing, undisturbing her left ear;
The chairs and tables do not crack! It will be fine to-morrow!

When late, last Lammas-tide, the warning signs we disregarded,
Nor heeded how the trembling fane sway'd on the high church spire,
Loud broke the storm, our ardent hopes too justly were rewarded,
Let's hail then the bright omen's dream of gratified desire.
If low the swallows skim the stream—avert it, gracious powers,
'Twill overcloud hope's fairy dream, and fill our hearts with sorrow;
But brightly will to-morrow beam, and strew our path with flowers.
Love will our sunshine double. Yes, it *will* be fine to-morrow!

VIII.—LOVE SPELLS.

[The great business of life being love, and the ties with which it is bound by marriage, it will excite no surprise that love spells should be among the principal charms by which a knowledge of futurity was sought to be gained. Midsummer Eve, or the Vigil of St. John, in June, and All Hallowe'en, the Vigil of All Saints, at the commencement of November, were the two periods of the year in which these charms were more particularly supposed to be efficacious. The charm of the hempseed is perhaps one of the most generally known of the love spells which have been recorded by the curious. Gay, in one of his rustic pastorals, has enumerated many of these spells; and Burns in his "Hallowe'en" still more.]

'Tis Midsummer-eve, the much-dreaded, desired;
'Tis the mystical eve of the Baptist St. John.
The eyes that watch'd o'er us to rest have retired,
And Midnight draws near—we are now left alone;
Such grace hath the hour 'twill the future make known,
But test we the proof—to the garden let's steal:
Try the spell of the hempseed, our fates 'twill reveal.

Cross we but the threshold and gain'd is the bower,
The watch-dog the steps of his mistress will know.
So holy the season all charms now have power,
The moon shining brightly above and below,
All in turn to some undisclosed influence bow.
With the magical fernseed, oh! were we supplied!
That no one might see us invisibly glide.

Though now they no blessing-fires raise on each hill,
Through which to gain passage, or boldly leap o'er;
Though no garlands are woven, in sign of good-will,
Of the orpine or birch overshading each door,
Keeping foul things afar, as in bright days of yore;
Yet we'll sow the charmed hempseed, love's secret make known,
'Tis the time, 'tis the time, 'tis the Eve of St. John.

Caution! ope the door gently, and forth let us go.
All is silent—fear nothing; the garden is gain'd.
Now sow we the hemp-seed, now use we the hoe;
Draw the mould softly o'er it, and all is attain'd;
Pause not, and the wish of our hearts shall be gain'd.
Yes, "Hempseed I sow," yes, "Hempseed I hoe;"
Oh, thou who'st to wed me come after and mow.

Ah! a step! some one follows—oh, dare I look back?
Should the omen be adverse, how would my heart writhe.
Love, brace up my sinews! Who treads on my track?
'Tis he, 'tis the loved one, he comes with the scythe;
He mows what I've sown—bound my heart and be blithe.
On Midsummer-eve the glad omen is won.
Then hail to thy mystical vigil, St. John!

IX.—GOOD NIGHT! - DREAMS.

All good Angels hover round me,
Shield me from the ills of night;
In soft chains when sleep has bound me
Let no thought of harm affright;
But let Dreams my fate unveil me—
They will heavenly heralds be
Of whatever may befal me—
Sorrow or Felicity.
Guard me, Angels! Guard me, Angels!
From each ill that may affright—
Death-watch, nightmare, sheeted phantom:
Bless my slumbers. Oh, Good Night!

Let me dream of smiling skies,
Bright pure streams—they'll omen be
Of all in life that most we prize—
Pleasure and serenity.
Let me dream of pleasant bells—
Sweet token of felicity
To every heart where passion dwells
As fondly as it dwells with me.
Guard me, Angels! Guard me, Angels!
From each ill that may affright—
Death-watch, nightmare, sheeted phantom:
Bless my slumbers. Oh, Good Night!

If in the depths of night I wake,
Salute my senses, Chanticleer,
For evil spirits still forsake
The spot wherein thy voice they hear.
Let me wake but with the morn—
Day's twittering call to rouse the hours—
The bee's warm hum—the hunter's horn—
The opening bud of early flowers.
Guard me, Angels! Guard me, Angels!
From each ill that may affright—
Death-watch, nightmare, sheeted phantom:
Bless my slumbers. Oh, Good Night!

THE CHRISTMAS HEARTH.

BY WESTLAND MARSTON.

ILLUSTRATED BY FOSTER

CHAPTER I.

INTRODUCTORY.

Whoever is acquainted with our northern shires, especially with those that lie near the border, will easily recal long tracts of flat and sterile land, where the sky, unrelieved by hill or tree, seems to hang nearer to the earth than in more favoured districts; and where the wide gloom of night is but more dismally revealed by the dim flicker in the window of a hut, or the occasional glare of a furnace. The country, it is true, as if anxious for the honour of old England, clothes itself in its better scenery of wood, mountain, and rivulet, as it advances to the Scottish frontier; but, when it falls back into the interior, nothing can be less prepossessing than the every-day working suit of Nature which it resumes. This kind of region is, of course, scantily populated, and boasts as little in its human as in its material examples, of aught that ministers to taste and refinement. The swarthy tribes of the colliery, the mine, and the forge; those whom interest compels to supervise their labours; and a few dealers in necessary commodities, make up the inhabitants. A journey to the nearest town is requisite for the aid of either doctor or lawyer, so that the only resident class we have not yet named is that of the parish clergy.

Few, scattered, and wild, as may well be imagined, is the flock to the charge of which the spiritual shepherd is in these places appointed. Rare and peculiar must be the gifts of a teacher who would here force his way to the hearts of the people. He must be able to translate himself into the facts of their lives, ever ready with calm plain counsel and energetic aid. In a word, the minister who would attach to himself this type of the working man must himself be a working priest. Not a man of this kind (though possessing many virtues) was the Rev. Lawrence Ingleby, curate of the united parishes of Westmoor-cum-Pitsfield, situated in the centre of such a district as we have described. Harsh, indeed, seemed the fate which, in dealing with one of the gentlest and most loveable of natures, assigned for its development such a sphere as that of Westmoor-cum-Pitsfield. But, that our readers may better comprehend the hardship of such a lot, we must acquaint them with some foregoing passages in the curate's life.

Lawrence Ingleby was the grandson of a certain Matthew Ingleby, whilom mayor of a large commercial borough. This Matthew had the good fortune to render an important local service to the Government of the day, and, being a merchant of high standing and some wealth, received for his services the unusual distinction of a baronetcy. The dignity, indeed, sat rather cumbersomely upon the genial and frank disposition of Sir Matthew. Between himself and his once familiar associates he found a barrier of reserve impregnable even by his own good nature. The town clerk, the family surgeon, and the baronet's brother merchants, who had been wont in his snug library to relieve the anxieties of the day by the moderate circulation of the punch-bowl, and the concurrent emission from their lips of tobacco-smoke, lively gossip, and puns unabashed by any consciousness of their badness, suddenly changed their deportment. They still resorted to Sir Matthew's, but only after formal invitation. Their intercourse was grave and constrained, suited, as they thought, to their friend's promotion. The very ladies appeared seized with the spirit of decorum, and refused to rattle in the glasses; the smoke from the "weed" no longer puffed its way in sudden gusts, but stole leisurely upwards, and then wound down again, as if in reverence for the ceiling; and many low-toned hints touching Sir Matthew's leisure were the prelude to partings which closed nights of frigidity and disappointment.

The unambitious gentleman, disquisified by long habits and tastes from invading the circle of "old county families," and exiled by new honours from hearty fellowship with former acquaintance, often bitterly lamented the boon of the Government. Surrounded by his repellent dignities, he was a sort of social prisoner within his own fortifications.

Feeling strongly the inconvenience of his undecided position, Sir Matthew resolved by all means in his power to protect his only son, Marmaduke, from a similar calamity. Sir Matthew had been long a widower, and his whole store of domestic affection was lavished upon his heir. For the boy's sake the fond father rejoiced in the institution which had been a burthen to himself; and his chief care was to fit Marmaduke, by education, for the rank which he would inherit. The lad was accordingly sent early to Eton, thence transferred to the Continent to complete his studies, and his vocation in life was eventually settled by the purchase of a commission.

The character of Marmaduke turned out widely different from that of his father. The chief care of the son was to have the real service to which Sir Matthew owed his title forgotten, and to ransack or invent genealogies from which some remote kinship to patrician houses might be inferred. Not to dwell on moral features, which little deserve perpetuating, we may briefly say that Marmaduke in due time succeeded to the baronetcy, became a large landed proprietor, and ordned the Hon. Miss Harrowcliffe, an amiable spinster of long descent and no portion, to become his reluctant wife. In justice to the lady, however—whose chief deficiency was a want of will to resist—it should be stated that she was persecuted into the step by her impoverished relatives. Two sons were the result of this union. The heir was destined, like his father, to the army; the younger, our friend Lawrence, was early regarded by Sir Marmaduke as a dreamy fool, who would never advance the interests of his family in active life. It was therefore decreed that he should enter the church, and have consulted to him the cure of souls.

CHAPTER II.

THE FARMHOUSE.

The qualities of Lawrence Ingleby, which Sir Marmaduke looked upon as sheer fatuity, were an affectionate sensibility and a delicate perception of beauty in nature, and elegance in letters inherited by the youth from his mother. Like her, too, he possessed a degree of conscientiousness and resignation which sufficed to redeem his character from culpable weakness.

Lawrence's career at Oxford, though marked by no brilliant achievements, evinced a keen relish for the graces of classical literature, especially for such as related to pastoral scenes and occupations. The idyls of Theocritus or Virgil were the chosen companions of his walks. Nor could he find it in his heart to deny a corner of it to Anacreon; for, though occasionally staggered by the warmth and jollity of the reckless old Greek, Lawrence would at times sip modestly of his intoxicating cup for the sake of the vine-leaves that wreathed it. So great, indeed, was his devotion to his favourite authors, that to translate them faithfully, and to illustrate them by copious annotations, became the pet scheme of his life at college. On leaving it, his first object (after a brief sojourn in a home of which his mother's love made the only charm) was to discover some seclusion where he might pursue his task undisturbed.

It is thus that blind mortals rush upon their fate. This attempt of Lawrence to secure tranquillity became the very means of its loss. Nothing, indeed, could promise better for retirement than the sequestered farmhouse in Herefordshire, to the tenant of which a college friend, and lover of angling, had recommended him. The shady lanes and gentle slopes of the neighbourhood—the orchard which belted round the garden, whose inner zone of flowers clasped the trellissed dwelling-house—the "thick murmur" of bees (which immediately suggested to Lawrence notes for the fourth "Georgic"), and the hearty but respectful deportment of the farmer and his wife to their new lodger, might have been deemed so many pledges for serenity of mind. Alas! in a light wavy form that flitted up the stair as Lawrence passed the threshold dwelt the genius of much future commotion.

Caroline Newcombe, the farmer's daughter, meant no harm, not she! In the mental excitement which ensued, she was, like many blithe lassies of eighteen, no wilful agent, but an instrument of fate. Is not every creature what Nature made it? Can the rose reject its own crimson? Is the light responsible because it dazzles? And is it malice aforethought for light-hearted damsels of eighteen to be charming? Nay, did not Carry for a week avoid any chance that might have led

[Gratis.

her into Lawrence's rooms, and become suddenly absorbed in tending the large fuchsia-tree, if he crossed the walk? Was it one fault, on the succeeding Sunday, she was caught in a drenching shower, returning from church, and that Lawrence, who carried an umbrella even in the dog-days, offered her its protection, and his arm? Could she help being captivating when, with glowing cheeks and depressed lids, she acknowledged her obligation at the door, and suddenly fled like a startled fawn into the parlour?

It was an impulse of common gratitude, after this, for Carry to see that Lawrence's little study was kept in order. It was an unavoidable accident that he would sometimes enter during her labours for his comfort, and that, after having on two of these occasions beheld her in bashful silence, he timorously entreated her on the third not to hurry. Nor was she responsible for the fact that Lawrence shortly afterwards discovered how much more sociable it was to take his meals with the family, and how soothing to him on a summer's evening was a stroll with the farmer, his wife, and Carry, round the garden, or through the orchard.

Carry, at a sacrifice on the part of her parents, had been educated at a "superior establishment,' and it speaks well for her that she returned therefrom in some degree accomplished and not at all spoiled. Her French accent, it must be granted, was a little mincing by good broad Herefordshire; but she could translate tolerably well, had developed a natural talent for drawing, had executed in water colours several flower pieces, which were glorified by frames in the best sitting room, had also learned to embroider, and, to her great credit, preferred knitting.

Companionship *will* lead to talk—talk *will* reveal good dispositions; and, these once found out, who can help liking them? It was as impossible for poor Lawrence to be insensible to the moral charms of Carry, her kindness, cheerfulness, and simplicity, as to be blind to the attractions of her sparkling brown eyes, and the fine outline of a form distinguished in every motion by its agile grace. The danger which he incurred in the society of so winning a maiden was alarmingly increased when, to illustrate his translation, she produced a tolerable sketch of the "wide-spreading beech" under which Tityrus likened and a complimentary likeness to Lawrence himself in the recumbent figure. But the cider festival, which took place in the orchard after the year's in-gathering of apples, was destined to complete the young bachelor's discomfiture.

It was the afternoon of a warm September day, the trees had been despoiled of their rich burthen, and the ladder leaned again the green trunks in tokens of a victorious siege. The young neighbours who had helped the good work in the morning now joined in the customary feast and frolic by which their labours were rewarded. An extempore tent was constructed, the hangings of which depended from two of the tallest trees. Beneath its shadow was spread a repast of various cakes, new cheeses, nuts, apples, cider, and mead.

Lawrence, fairly enticed out of his shyness by a scene which so reminded him of his pastoral authors, chatted merrily with the group of swains and damsels around him, with a special reference, doubtless, to the ear of Carry. She had never heard him so eloquent. He had never seen her so bewitching. A sweet and deep silence would sometimes fall upon her in the intervals of laughter. You should have seen her too, as, her arms sustained above her head by a projecting bough, her fine form tapered to the sward. If, at such moments, she stood like an arrested dream, her ringing voice and buoyant step would soon vindicate her claims to reality. She was attired, too, with a grace and an attention to the niceties of costume which well contrasted her with her kind-hearted but less refined companions. There was a careless dignity in her hat that at once bespoke the rural queen; nor was the little glove I had unworthy of the head-dress on which she proudly menaced Lawrence, as reclining from the intigue of one country dance he watched her float through a second. It might be chance, it might be design, that, as she did so, revealed to him a perfect foot and ankle, defined by the most charming of *bradequins* from Cheltenham. For his part, she seemed the very personification of Amaroon's "neat ankled maid," except that the ivy was wanting to her wand, and that she danced not to the harp, but to the violin. Perhaps it was a vivid an ilustration of the bacchanalian poet that induced Lawrence to emul-te his precepts by copious draughts of cider. Certain it is, that he grew exhilarated and bold, and when the happy voices of the departing guests had died away, he had spoken to Carry in tones which, if more hushed than theirs, seen indicated a yet deeper happiness. As they wound slowly from the wicket gate to the house porch, their fate was decided—Lawrence and Caroline were betrothed.

CHAPTER III.

A CHRISTMAS-EVE AT WESTMOOR.

The turnings of our narrative lead us back to the dreary spot whence we started—the parish of Westmoor-cum-Pitsfield. What has been done, or rather suffered, since our scene shifted, though it took years in experience, may be told in a few sentences. Sir Marmaduke Ingleby, who generally ignored his young person's existence, became emphatically conscious of it when the secret of Lawrence's wooing transpired. The baronet, though for the most part cold and wary, was on this occasion roused into passion, and under the heaviest penalties, to which he bound him: If by oaths, forbade the proposed union.

In vain the mild and startled Lawrence besought, reasoned, and delayed. In vain poor Lady Ingleby, who centred in him the interest of an else stagnant life, endeavoured to play the mediator. As Sir Marmaduke continued to hold that the marriage in question would bring careless disgrace upon his house, and as his son felt that to abandon it would bring a like disgrace upon himself, no reconciliation was possible. Lawrence, having first taken orders and obtained the curacy of Westmoor, which was literally going begging by advertisement, united himself to Caroline Newcombe. An annual income of £40 from the curacy, and what occasional help the father of the bride could afford, formed the young couple's sole dependence.

In the course of two years the latter species of aid suddenly ceased by the death of Farmer Newcombe, who left a pittance barely sufficient for his widow. An attempt of Lady Ingleby to assist her son had been discovered by Sir Marmaduke, and, as he swore that a repetition of it should exclude Lawrence from the benefit of even a posthumous forgiveness in his will, the heart-crushed mother judged it more prudent to desist. Lawrence elder brother, who had until lately resided abroad from his boyhood, was now with his regiment in India. The only advocacy, there ore, that could have moved Sir Marmaduke was unavoida ly withheld.

The young couple at Westmoor bore up bravely for a time. The sweetness and patience of Lawrence was a fund of passive strength difficult to exhaust. In the elastic and loving nature of his wife, too, the poor curate found a constant help and solace. The courtesy of her husband's habits, and the grace of his mind, so different from the coarser blandness of her former associates, had deeply impressed Carry, and caused a feeling of reverence to blend with her affection. Nor was the contrast less striking and advantageous between him and the almost fierce, race animosity shown his brothers cast. Beauces this, Carry had a touch of romance in her character. She never believed that the natives of one so amiable and accomplished as Lawrence could remain for ever estranged from him. She indulged herself, dear heart! with visions of his restoration to the parental hearth, and gave her small leisure to such sombre as she thought would enable her to decorate room with the happy time arrived. The most common figure, indeed, under which Lawrence presented himself to her mind was that of a prince subjugated on a barbarous coast, and only waiting the accident of a passing vessel to regain his dominions. And when she bestowed on him, as heir apparent, a vigorous boy, whose ingression bespoke full capacity to maintain his rights, natural or acquired, the desert island of Westmoor, as Carry called it, grew very tolerable to those who had been cast upon its shore.

Indeed, during the first five years of Frederick Ingleby's existence (he was so named after a bro her of Lady Ingleby who had died young), the sense of parental delight seemed daily to unfold. It was in vain that Lawrence, after his duties, dipped into the recesses of his favourite Muse. There was a fascination in the baby language of alternate cry and coo which effectually suppressed the curate's interest in more classic tongues. When, with the coquetry of twelve months, the little Freddy half extended his arms towards his father, and then, slyly retreating, hid his laughing face in Carry's neck; when that sound peculiar to babies—a sound composed of the vowel *a*, with the pause of an ambiguous consonant—matured at length into an unmistakeable *da, da*; when, by the boy's use of this ejaculation every time Lawrence entered the room, the latter found it was specially applied to himself, you would have thought his transports had reached their height. But, when the little pedestrian, accustomed to the support of the paternal finger, one morning suddenly rejected that aid, and with peals of laughter moved rocking and swaying over a sea of carpet to the landing place of the nearest chair, the ecstasy of Lawrence reached its climax, and the shout emitted by him was so startling as greatly to enhance the peril of the voyage. He was that day proof against fate, and decided on the important matter which had cost much anxious discussion—the purchase for Freddy of a hat with an imposing plume which Carry had seen in a shop window at the district market town. He drew with glee the requisite half-guinea from his slender purse, and then wiped away the tears which stood in Carry's eyes as he placed his money in her hand. There was a sacrifice, he observed; it was but dining more frequently on bacon, and avoiding butcher's meat; and Carry knew how partial he was to rashers; so she smiled, and they felt they had nothing to wish for except for a longing on the part of Lawrence, who was deeply attached to his mother, that Lady Ingleby could see the treasure she possessed in her grandson.

But over this calm domestic sky a cloud gathered. *Gathered*, indeed, is not the word to use, so suddenly did it spring up and darken the horizon. In his sixth year little Freddy, as he bounded down the stairs, missed his footing and rolled down several steps to the bottom. The consequence was a serious local injury, threatening permanent disorder of the spine. For a year and a half the little fellow was scarcely permitted to move. The expenses of medical aid and the little delicacies needed by the invalid rapidly diminished Lawrence's scanty income, and he had not only to bear anxiety for his boy, and also for poor Carry, whose health grew visibly affected, but also to contend against the hardships of actual privation. His troubles, though assuaged, were not dispelled by Freddy's ultimate recovery, by the noble and affectionate disposition which he showed as he grew up, and by the rapid progress which he made under his father's tuition. Arrears had been incurred during the lad's illness which would for long remain a burthen upon Lawrence.

Nor was the life of continual struggle in which poor Carry with himself was involved, the only hardship. Painfully sensitive, the poor man was at times haunted by a dread lest his integrity should at last be questioned—lest in the eyes of men disgrace should be added to poverty.

Such had been the state of things for twelve years, when, one gloomy December twilight, an unusual visitor (the postman) knocked at the curate's door and delivered a packet. Opened, its contents proved to be a mourning letter in a strange hand—that of a solicitor—informing Lawrence, by his father's direction, of Lady Ingleby's death, and inclosing a bank-note for £10; there was also a letter from the deceased lady herself, whose last request that it should be conveyed to her son had thus been complied with.

It was a long epistle, written under the presentiment of gradually approaching death. It prayed earnestly that Lawrence, after this event, would not cease to believe in the maternal love which had so harshly been denied an utterance. "It was," urged the unhappy Lady Ingleby, "that very love which forced me to choke a mother's impulse. My son, or, rather, let me say my children," she pursued, "I would have hurried to you in your trials across seas, over mountains; I would have at least shared with you the little I could call my own; but I dared not. To have done so would have been to cut off the last hope of your father's relenting. Oh, my Lawrence, you will understand the heart that for your sake has borne that pain, should doubt it! You *must* know this in Heaven; but even here be pitiful. No, I mean not that—be just to me, oh! my son: I deserve it!"

This letter Lawrence read through in silence, only screening his eyes with his turn hand, as if against the blear sight of a solitary candle. When he had finished he pressed his face into both hands. Carry, when she gently withdrew them, saw no tears, but a look so unlike his habitual one, that she did not speak to him. Lawrence took the candle and retired to his chamber. He had remained there alone for more than an hour, when some of the labourers at the colliery rushed into the house with news of an accident. A large mass of earth had suddenly given way, and descended upon several of the workpeople with their children. Two men and a boy were killed upon the spot. The remainder, who had sustained serious injuries, were with difficulty brought alive to the surface.

Even under this present grief Lawrence could not delay to visit the sufferers. He returned, however, after a short absence, and with an increased gloom of expression. One or his greatest trials had been the small influence he was able to obtain over his parishioners. The modest hesitancy of his manner, and the somewhat fastidious and circumlocutory language which had become natural to him, was a bad medium for addressing the almost fierce race amongst which he dwelt. His earnest but gentle appeals from the pulpit, and his household ministrations, had been often met with a sort of ill-restrained contempt, if not with a sullen rejection.

As Lawrence approached the cluster of huts which lay between his house and the colliery, he observed several men bearing a lad in their arms, who had evidently received some severe injury. The sufferer uttered a cry of pain as his rough but not unfeeling supporters attempted to change his position. The curate sprang hastily forward, and endeavoured himself to adjust the painful load more tenderly. But his trembling arms were unequal to the task, and a still shriller cry showed how unfortunate had been the interposition. The mother of the boy, who had rushed from the house, turned upon Lawrence with a storm of curses invective.

"The daft, helpless loon!" she cried, "that thought himself so much above common folks, he must speak to them in a senseless gibberish at church. Couldn't he keep at home till he was called for, and not wrench the limbs off of honest people's children?" And a sullen murmur from the group expressed their assent to her words.

"Why was I born to a life that is useless to any one?" exclaimed Lawrence suddenly to his wife's anxious questioning. She made no reply, but knelt by him; and Frederick, who was now fifteen, rose from his books, and with a look of defiance to sanderers in general, took his post by his father's side.

A useless life, Lawrence! to which the charge of two immortals has been given, the one self trusted by the faith of love, the other a boon from Heaven? Let no husband or father who pilots dear voyagers, relying on himself, a freight of human sympathies and hopes which shall land on eternity, count his life useless! Lawrence felt that his uttered appeal, as he looked at his wife and son; the brief bitterness passed from his heart, and left only a chastened sorrow.

It was three weeks afterwards, and on a Christmas-eve, that Lawrence, accompanied by Fred, now his constant associate, had gone to the market town before mentioned, to make some inquiries as to a small legacy for one of his parishioners. There had been a heavy fall of snow that afternoon, and it was quite dusk before the father and son, cold and wet, reached their home. But the look of anxiety with which Carry welcomed them was exchanged when they came down stairs, to explain that, to the fire, for a stiff dewdrop look, a smiling ruddiness, gradually broadened and deepened into a river of mirth, completely overspread her face.

"Well, Carry?" said her husband with a puzzled look.

Her answer was to give him a bundle of baggage in their little parlour—kit-bag, and to hold aloft exultingly a pair of garments.

Had she exhibited a casket of family jewels, Lawrence could not have looked more astonished.

The mystery was thus explained. An old college acquaintance of Lawrence, who had become a successful advocate, was in the north for a few days on a shooting excursion. Having met with Lawrence in the street, the thought that it might really designate his old friend had occurred to him. Inquiry of Mrs. Ingleby was confirmed his hope. The result was an instant despatch of the basse of pheasants, with an intimation that the donor invited himself to supper that very night.

After reading and re-reading the little note which bore the well-remembered signature of Charles Morton, Lawrence stood for a while with an expression of bewilderment comically pathetic. "Morton! Charles Morton!" he at last ejaculated; and then, as if still incredulous, rubbed his hands with a sort of cautious and sceptical glee. But there was no longer room for doubt when, with the assistance of an active, smiling lass, Carry had fairly got the pheasants upon the broach. The bright clear fire, the busy murmur with which the jack called attention to the discharge of its duty, and, finally, the delicate and savoury odour that would through the kitchen, all bore witness to a reality. Lawrence drew his chair before the cozy forting warmth; and a quiet smile, not untouched with sadness, broke over his face. That he would actually sup from those pheasants was a proposition that was readily gaining strength in his mind. But this thought, though sufficiently important and strange, was by no means the bound of his musings. The cheerful kitchen-range, and the fragrance with which the roasting delicacies assailed his nostrils, seemed to transport him to a distant world—that of his boyhood. He remembered, as if it were present, the large kitchen in his father's house, with its cured meats suspended from the roof, the barons of beef that in long ag Christmases had revolved before its fire, and the warm scent of cakes in the oven, which had so often tempted him when a child to invade the domain of the cook. He vividly remembered being compelled from this region, and he seemed to have thought the various passages and rooms of the mansion, lingering last in that where his mother used to sit; and then on a footstool at her knee he fancied he beheld Carry and Freddy. He had quite forgotten the tall youth beside him, the constant associate who beguiled him of many a dull hour by his singing with him his favourite tunes. He looked not on the lad's face, as it now was firmly defined, though lit with intelligence and sensibility; he saw the boy of two years, with his wistful upturned gaze, and fancied that Lady Ingleby stooped to kiss him. Lawrence, thus wandering through a past life, started, almost with a sense of wrong, when a full quick knock awoke him from his reverie. But when Charles Morton entered, grasped him by both hands, and saluted him by his old college appellation of Corydon (referring to him who vanquished Thyrsis), the curate of Westmoor was fairly overcome. This allusion to old and cherished pursuits, in which, except Frederick, not a soul had sympathised for years, set in a flood of associations which Lawrence could no longer resist. With laughing eyes, though the tears poured down his cheeks, he hugged his friend to his bosom. A calmer interval succeeded. Affectionate and serious for the most part, though occasionally varied with merriment, was the converse of the fireside circle that ensued. The group did not separate till the bells of the hamlet church broke in upon a pause and warned them that it was no longer Christmas-eve.

CHAPTER THE LAST.

ANOTHER CHRISTMAS EVE.

Nearly ten years have elapsed since the Christmas-eve which we have just recorded; but we can no more notice them than do the ingenious painters of moving panoramas the dull scenery that intervenes between their points of interest.

Resuming our narrative, we find ourselves in London, and, turning down an archway in Chancery-lane, we enter that grave temple of civil justice where the Master of the Rolls is wont to preside after each law term. It was a clear cold morning, during the sittings after Michaelmas. A few members of the Chancery bar sat scattered over the benches. Already had the usher prayed silence with a terror-striking frown which he deemed at his duty to direct towards the green baize door. One of the most affable of Judges had taken his seat after this intimidating prelude; and the "part-heard" cause for the day had been called on.

"Who appears for the defendant?" inquired his Lordship, observing no movement amongst the silk gowns.

"My learned friend, Mr. F——, please your *Lawship*; but he is engaged in an appeal before the *Lords*," replied the opposing Queen's Counsel

"But the cause was specially appointed for the day," observed the Judge, who, with all his courtesy, was a strict disciplinarian; "if any gentleman is with Mr. F——, I shall hear him."

A junior barrister, evidently of some years of thirty, now rose. Notwithstanding his youth, and the comparative rarity of his appearance in court, the Judge turned to him with a gracious inclination. The young man's name had already been favourably known in literature, and his Lordship was a man of taste.

"I appear, my Lord, in the absence of my learned friend."

"Proceed, Mr. Ingleby."

At these words a heavy-built elderly gentleman, in whose face pomposity struggled with querulous anxiety, half started from the place he occupied by his solicitor.

His man was the defendant in the suit, Sir Marmaduke Ingleby. The young barrister about to plead for him was his grandson, Frederick Ingleby, the son of the poor curate of Westmoor.

The advent of Charles Morton at Westmoor had been a turning-point in Frederick's life. Struck with the manners and talents, Morton (who was a man of wealth, and, on a second visit to his father, offered to procure the young man a reportership upon the press, and to receive him into his own chambers. By reporting and literary composition, Frederick had struggled to the bar; and a second work on the practice of his profession had procured him the confidence of more than one solicitor. Amongst these was the London agent of Sir Marmaduke Ingleby, who, little dreaming, from the young advocate's frugal living, of his relationship to the Baronet, had given Frederick a junior brief in the important case of "Sanders *v.* Ingleby." Sir Marmaduke had only arrived in London the previous day, and, knowing that a distinguished leading counsel had been retained, bestowed no thought upon his second.

The fate of Sir Marmaduke hung upon the issue of that suit. Ostentatious and ambitious, he had greatly diminished his fortune, and had vested almost all his remaining wealth in the purchase of a large and impos ng estate in his native county. His solicitor had advised him against the purchase, deeming the title to the estate, though strictly honest, not legally secure. Sir Marmaduke, however, was not to be deterred, and became a purchaser, though the conditions of sale included the proviso that the vendor should not be answerable for any defect of title before the property came into his hands. A flaw anterior to the convey ance had since been alleged by the claimant, whose success would leave Sir Marmaduke impoverished beyond all remedy. Will the moralist forgive Frederick for the stern hope that by his talents he might heap upon the man who had cast out his father the weight of a surpass ng obligation, that he might snatch him from the hand of her who gave the gracious boon of her little help and from the upper story. This riddle is eventually explained by the descent of a portmanteau and sundry bandboxes from up stairs. Carry follows, and, when the counsel leaves her alone with Lawrence, casts her arms round him with a warm caress and a look of such mingled love and happiness as it was a luxury to behold—to say nothing of the wearing of it. And they had good cause for joy; the son on whom their hopes were fixed, and for who e good they had borne the pang of a long separation, had given year by year new proofs of his affection, had helped them by the consecrated aid of his earnings, had made their home endearing before it was, and they were about to set forth to meet him in Yorkshire, whence he proposed journeying with them for a few miles to a destination which he had chanced to leave unmentioned.

Ah, what help, what health of mind and body, had this good son been to Lawrence! The spirit of cheerfulness and action had renewed itself in his breast. Even the labouring poor around him, though they failed to understand his discourses, had learned to revere the loving sermon of his life. It is true he sighed when he thought how much more suited to their spiritual necessities had been the broad style of practical and homely illustration used by a reverend brother who had

lately officiated at Westmoor during the curate's temporary illness. "I have not the gift to instruct them," mused the latter; "but they love me." And that thought consoled him.

In the evening of the day on which they started, our travellers duly reached the Yorkshire station, where Frederick waited to welcome them. Fain would we dwell upon the proud and joyful greetings interchanged between him and his parents; but our narrative, which has more than once halted for explanation, must push on, that we may not strain the reader's patience between arriving at our terminus.

The novel and ingenious metaphor which we have just achieved was probably suggested by the succession of easy railway journeys which Lawrence and Carry made with their son to various points of interest. About a week after they had left their home and on the day which was to end in another Christmas-eve, the party found themselves many a mile south of broad Yorkshire, and entering upon a district where the landscape presented, in gentle variety, fair cottages nooked in their evergreen shrubberies, fir-crowned terraces, and ledges of brown hills, severed by the railway, and glowing like walls of fire in the clear December sun. The beauty of the scene, the rapid motion, above all, their domestic happiness, filled the hearts of Lawrence and Carry with an unspeakable gratitude that made their faces look like silent hymns. The solemnity of joy in their aspects found a contrast in the exultation which lit that of Frederick. In the course of the day several gentlemen entered the carriage; and, the conversation turning at last upon social and religious topics, Lawrence expressed the interest of a pious heart in language which charmed his auditors by its earnestness and grace.

"He would have been understood here," thought Carry, as under cover of her plaid her hand stole to her husband's and tenderly pressed it.

The light was low in the west, and objects began to assume a romantic vagueness. There was something phantasmal in the partial drifts of snow, which several keen though bright days had prevented from dispersing, and in the pools—darkly red in the setting light—over which the forms of many a skater indistinctly glided. Lanterns, too, were seen on every platform bursting into the carriages with a kind of luminous laughter as they halted. And there was vast unloading of hampers, with voices of eager questioners, and, at times, a gleeful chorus from boys who had accompanied their fathers to meet the Christmas cheer. The spirit of Christmas—peace, faith, and love combined—dwelt in the hearts of the Ingleblos—parents and son.

At last the moment came for them to quit the train. They did so, and entered a carriage which was in waiting for them outside the station. The moon had risen, and, with a troop of stars, crowned the groves which on either side skirted the road. There was purity and awe in the deep stillness which reigned on every side, till one by one the glimmering lights of cottages, or the distant illumination of a mansion, indicated the neighbourhood of a town or village. Soon the lights became more clustered, and the silvered spire of a church caught the eye of Lawrence as the carriage wound into the centre of the hamlet.

They stopped for a minute at a lodge-gate, and Lawrence thought they were about to turn down the avenue which it guarded. But the keeper told them to drive on to the rectory, saying that his master, Mr. Morton, would immediately join them.

You would have seen by daylight that the rectory was a quaint solid-looking structure of brick faced with stone. It stood, screened by beech-trees, at some little distance from the road. Passing through the hall, you would find that the rear of the house opened upon a terrace which overhung one of the most picturesque of our southern rivers. The attention, however, of Lawrence and Carry was attracted by the comfortable appearance of the front, several windows in which were lighted as if for expected guests.

The party having descended and entered the house, the *beau-ideal* of a library was thrown open for their reception. The walls were lined with choice books, many of them classical and theological. But enjoinments more immediately tempting were those pledged by a blazing fire, and by a tea equipage upon the table.

Lawrence seemed as if waiting for an explanation. At length, he began red, with a smiling embarrassment, "Where is our host? I trust we are not intruders!"

"There are no intruders here, my dear Corydon, but myself and my friend," said Charles Morton, who at that moment entered the room with a stranger, whose bearing and military undress at once denoted his profession. Frederick advanced to him, and greeted him warmly. Lawrence gazed on the stranger's face, as if he had seen it in a dream.

"Lawrence," said the latter, extending his hand, "let your brother, though he has little deserved it, give you the first welcome to your new home."

"His home!" exclaimed Carry.

We have not space to record the broken dialogue, by which it appeared that, through the influence of some of Frederick's seniors at the bar, the living at Farthorp, which was in the gift of the Chancellor, had been conferred upon Lawrence. Nor can we detail the circumstances of Major Marmaduke Ingleby's return to England, from which he had been an absentee almost since childhood; nor how he was moved to make himself known to his nephew Frederick, and to investigate the reasons which had so long exiled Lawrence Ingleby from his father's house. Neither can we give any lengthened report of what Lawrence said when his good fortune was explained; for the simple reason that he said so little. After his first amazement had subsided he pressed every body's hand in silence, and suffered himself quietly to be placed in the easy chair. Carry, too, was silent; but, when the last cup of tea had been poured out, she drew near to the fire by the side of her husband, and sat quietly in the corner, her feet on the fender, her hands gently clasped, and her eyes shining through unrestrained tears. At length, glancing at her son, she whispered, "Lawrence, he has done it all."

Some minutes having elapsed, Major Ingleby motioned his brother aside, and after a few words, deep emotion was visible in the face of the latter.

"I never hoped for it," said Lawrence; "but can you doubt my answer?"

Here Frederick interposed. "Not to-night, not at least this happy night," he exclaimed.

"Would it be happy longer, my son, if we refused?" said Lawrence.

"But when I think upon all the misery which my grandfather's unrelenting sternness has brought upon the parents whom I love."

Here Carry approached.

"And whose best claim to your love," rejoined his father, "was, that they strove to live in Christian charity and forbearance towards all men!"

"But, sir," persisted Frederick, "your mother, whose life his severity embittered and shortened!"

"Ah, my mother," exclaimed Lawrence, "went thou now amongst us! What would she bid us do, Carry?"

"Love and forbear," answered Carry.

"She would, my son," said the minister solemnly.

Never had Frederick so revered him as when he replied, "My father, you are right!"

We do not intend, for the sake of a happy "winding up," to transform Sir Marmaduke Ingleby into an affectionate and generous man. A life of mean and selfish ambition had tasked the moral strength which character needs to rally. But that pitying angel, so loth to see the human heart utterly desecrated, in the last hold of a narrow key-hatter ruin at bay. The man who had treated his wife so harshly when living mused her uncomplaining patience when he lost her. And when, on Major Ingleby's return, to whom all his thoughts had been devoted, he found his old sister, on treating him with cold respect, and sympathizing with the banished Lawrence, a sense of disdain and reproach and a selfish yearning for affection, that was, however, better than selfish apathy, seized upon Sir Marmaduke.

"Take me to your brother," he said to Major Ingleby, whom he could not bear from his sight, and with whom he had travelled to Farthorp, remaining at the inn.

Wheels were shortly heard at the gate of the rectory, and Major Ingleby left the room. Before the fire, surrounded by his wife, Frederica, and his faithful friend Morton, stood THE RECTOR. His hand, locked in Carry's, trembles, and his eyes are fixed upon the door. At length it opens, and after Major Ingleby enters a somewhat bent and grey-haired man, who shades his eyes, and looks for a moment dubiously at Lawrence, then totters forward into his extended arms.

Who shall say that the mother saw it not—that hers was not one of the rejoicing spirits at that CHRISTMAS HEARTH?

THE CHRISTMAS FESTIVAL OF FLOWERS.

BY MRS. T. K. HERVEY.

ILLUSTRATED BY GILBERT.

Friends that rather round thy hearth
When the snows envelop earth
Shall have greeting fonder,
If in summer twilights ye
Mutely strayed, and tenderly
In their hush did ponder.

Angel faces Youth beholds
When the veil of Time unfolds,
Though so soon it closes,
Once beheld are known till death;
And on Memory's bosom Faith
Placidly reposes.

Outward beauty thus awakes
Human love, and but forsakes
Then the inward yearning,
By its passion may create
Glories rarer than await
Mortal sight's discerning.

CHAPTER I.

IN a retired dwelling on the borders of Dartmoor lived many years back a man who passed by the name of Paul Corolla. Little was clearly known about him beyond the fact that he was a trader in flowers. Some few whispered that he also dealt in poisons, while others loudly proclaimed him a magician—a dabbler in the black art. The man was, moreover, a collector of simples; and many were the country people who sought the habitation of the flower-dealer for remedies of all kinds. He was, indeed, frequently solicited to furnish charms and spells whose potency was supposed to avail against ills which no human hand could alleviate or arrest—the trial and the burthen of mortal sorrow.

With such a reputation it may well be surmised that many unaccountable stories went abroad concerning the man and his pursuits. What most puzzled the curious was, that, instead of the mystery and seclusion which are generally supposed to belong to the dealers in occult sciences, here all was open and undisguised. The house of Paul Corolla was a habitation of the most perfect simplicity. Looking at its plain brick walls, and ordinary sized windows, its long and slightly-fenced garden, and its spacious hoth use, the most excursive imagination could scarcely entertain the notion of artifice or concealment. The dress of Paul, moreover, was scarcely suggestive of the necromancer. It was old, certainly, or, rather, it was somewhat out of keeping with the habits of a trader, and was suited, rather, to the ease and indolence of the successful merchant, than to the condition of a man who laboured with his hands, as Paul evidently did. He generally wore a long loose coat, reaching below his knees, and leaving the exact fashion of his nether garments a matter of doubt. His head, when it was covered at all, which was rarely, was surmounted by a cloth cap, resembling in shape the ancient baronial cap. His hair was slightly grizzled, but not grey; his eyes mild, but searching. His only companion was a negro boy, who appeared to act as his servant, and who was reputed to be deaf and dumb.

One evening, late in the summer, as the twilight of the shortening day deepened and closed, Paul was seated in the little back parlour of his house, as usual, alone. On the table before him stood a solitary plant, in a common red earthen pot. The plant was of that species known to botanists as the *Fraxinella*, or "little ash." As Paul lightly touched its pink flowers and feathered foliage, apparently occupied in studying the condition of the plant, a hasty knock was heard; and the next moment the negro boy showed his woolly head at the door, and, making a sign to his master, ushered in a young man of somewhat disturbed aspect. The youth, who could scarcely have seen more than nineteen summers, had that free, frank, open face which at once prepossessed the beholder in its favour. But his eyes wore a look of restless excitement, and his lip quivered with some inward emotion.

As the youth found himself thus suddenly in the presence of Paul Corolla, the calm and unmoved bearing of the reputed magician appeared to act as a momentary check upon the outward manifestation of the passions which stirred within him. He took the offered seat which Paul drew forward, and was about to speak, when, glancing behind, he caught the eyes of the negro boy fixed intently upon him.

"Do not mind the boy," said Paul, noticing his hesitation; "he has eaten of the dumb cane," and at a look from his master the boy slunk into a corner. "Speak!" continued Paul, "what is your pleasure?"

"A moment since," cried the youth, rising restlessly, and turning to go, "a moment since I arrested my steps at your threshold, scarcely knowing whom or what I sought. Your presence has awakened me: I have been a fool. Pardon me, and farewell!"

"Yet, stay a moment," returned Paul, eyeing the young man with some interest. "You sought the magician; remain at least with the host. I do not entice you with the promise of a love-philtre or a charm against the plague; but there are more things in nature than you dream of, and perhaps——"

Paul stopped; for the young man had reseated himself, and, placing his two elbows on the table, buried his face in his hands. There followed a few moments during which neither spoke. At length the young man looked up. As he did so he started on seeing that the plant which stood on the table before him, and which his bowed-down head had almost touched, was illumined by a soft, blue light which ran over every leaf and branch. A balsamic odour at the same time filled the room, so strong as to be almost overpowering.

"This is juggling," cried the youth, as he at the same time drew back his chair.

Paul Corolla smiled. "You do not like the light?" he said, and he lifted the plant from the table, and put candles in its place. "Come, I will humour you," he continued. "You dislike my *Fraxinella*; I will exchange it for my sweet gall. These tapers are composed of the wax produced from our Devonshire myrtle; nature's production equally with the other." The tapers were lighted; and again a delicious odour, most grateful to the sense, filled the chambers of the Flower Magician.

"You are no common man," said his visitor, gazing boldly and steadfastly in the face of Paul. "You have bidden me stay—and I have tarried. But what are these shows to me; to me, a man racked in heart and brain? Pshaw! it is child's play!" And a sneer curled a lip beautiful even in its scorn. "Send me forth wiser, stronger, freer than I came, or in Heaven's name let me go!"

"Hark to the cry of the river!" said Paul, as if he had not heard him. "Hark! the Dart is full to night, and comes roaring down into the valley. You know our saying here in Dartmoor?

River of Dart, river of Dart,
Every year thou claimest a heart.

What say you? That knell rang in your ear as you took refuge from your own thoughts upon my threshold. Go, fulfil the prophecy of the fool who first uttered it. Go, let the river should this year lack its victim, and so throw discredit on the soothsayer. You are silent. Shall I guide your steps rather to Crammere pool, whence the swollen Dart rushes down lusty and strong as breathing buoyant human life? There, it is said, you may mingle your nail with that of the unhappy who fill its drear morasses with their groans."

"You mock me: this tradition——"

"*Love* itself is a tradition," pursued Paul, his eyes intently bent upon the countenance of his visitor; "so at least you will account it when you have lived to my years: a jest, a juggle, a counterfeit; a worn-out tradition, believed in by our fathers, trusted in by ourselves. This is all that I know of it now; yet, you see, I am calm."

"You search deeply: sorcerer or not, you read my heart," said the youth. "Know, then, the whole. I am reckless, despairing. I loved—I love still, with the hazardous passion of the gamester; of one whose all is staked upon a single die. She whom I so blindly worshipped once vowed that she loved me in return. Now, all at once, without one parting word of peace for memory to starve upon, I am scorned, rejected, banished! From what quarter can comfort come to a wretch like me? Other women have loved, and been fickle: but Alice Cranstone has no heart."

Stirred by the passion under which he spoke, the young man rose suddenly, and paced the room to and fro. But Paul spoke not. A strange cloud—a momentary expression of bitter sternness—passed over the usually calm face of the man, Corolla, at the last words uttered by his guest. The young man saw it, and, supposing himself to be in some way the cause, would have withdrawn somewhat abruptly. But Paul, with restored calmness, said, "It is nothing. Do not go. You are not a boy to be chilled by a passing change of mood. And yet," he added, after a pause, "perhaps you are right. I think we are neither of us quite ourselves to-night. But, if you do not quite condemn me as a trifler—a charlatan—visit me here again. I have done you at least no harm for this time. Your next coming may, possibly, be more propitious. Your name is?"—

"Philip Tremeheere."

CHAPTER II.

As Philip passed from Corolla's door, the negro boy, unnoticed, slipped out after him. An hour had scarcely elapsed before the boy returned to the house; and, having carefully made fast the outer door, crept into the room where his master still stood, rapt in bitter musing, and whispered in his ear:—

"Buckra man go play—so!" and he shook his hand in imitation of the movement of a dice-box.

"Where?" inquired his master.

"Down by de ribber, up by de big house. Many number young mans dere: all make merry,—smoky, drinky. Dey see Buckra man go by. Dey shout, 'Pheelip, Pheelip!' Massa Philip he go in den: he lose money: he look sad. Nigger boy see him through de window. Young mans laugh. He play again: shake de box—so, like mad! Gorl how him set him teeth!" And the young black showed his own white teeth by way of mimicry.

"Enough: now go; chew the dumb cane, and be still."

But again the knocker was assailed. This time it was raised by a woman's hand.

"What is your business, my good woman?" demanded Paul, somewhat impatiently, as he himself unfastened the door.

"My young lady is taken badly, sir," was the woman's answer. "My mistress is from home, and beliks I may be doing wrong, but I heerd you were larned in leechcraft, sir; so, may it please you, just step down, a weary way though it be, and give her a smile."

"And who may your mistress be?" questioned Paul.

"Miss Alice Cranstone, of the Hollies, so please you, sir."

Again a contract ng of the brows showed Paul Corolla to be ill at ease.

"Lead the way, then," was his somewhat testy reply; and the two went out along the moors.

The summer night was dark and starless, the moon had not yet risen; no sound broke the stillness of the dreary moorland waste as Paul pursued his way onward—no sound, at least, more earthly than that voice to which he had recently alluded as "the cry of the river." This cry, as is well known, is that louder sound of the water which rises towards nightfall. To night it rang with more than its wonted solemnity upon the ear of Paul; and while the imagination of his more simple companion beguiled the way with legend of pixey and rock sprite—the cloven hoof that ascended the lofty mass of the Dewerstone—the black headless dog of the Valley of Plym—the stone circles raised when there were "wolves on the hills, and winged serpents on the lowlands"—the Hell Tor, where Satan strove with King Arthur—or the "nine stones" that by their daily dance under the noontide sun—all the while the thoughts of Paul Corolla were with the days of his youth and of his love. His soul looked through the darkness, and he beheld that same track of moorland as he had beheld it of old—that very ground he had trodden years and years ago. Again, in fancy, the strong spiney branches of the golden ling sprang elastic from beneath his youthful tread; the azure bluebell drooped its head, burthened with beauty; the wild heath rustled, and the herby thyme scented the fresh moorland gale, that died down fainting with sweetness. Paul did not know until that night how young he was still at heart.

Alice Cranstone, the girl whose sick-room he had been thus unexpectedly called upon to visit, lay shivering like one in an ague-fit. As her pale, sweet face reposed sideway on the pillow, Paul gazed upon its almost child-like beauty, and marvelled little at the despairing madness of Philip Tremenheere. Aided by his recently-acquired knowledge of her quarrel with her lover, he divined at once how much of real bodily sickness was here, and how much of disorder was the mind's work. Bodily ill the poor child was, however; and a glance round the room soon served to initiate the Flower Magician into the secret but simple cause of her malady.

"You have wandered far in search of these flowers," he said to her; at the same time lifting from a table near a large quantity of the sweet-smelling, but sickly, *Spiræa ulmaria*. "You found this meadow-sweet sufficiently fragrant, doubtless, or you would scarcely have encumbered yourself with so plentiful a burthen."

The sick girl answered, like one in a dream, "I did not know I had wandered so far—I did not know I had gathered so much—I—I was thinking of something else."

"You believe in charms?" questioned Paul.

The lip of Alice blanched more and more as she responded, "I do not know. I sometimes think that some charm must have power over me, that I am possessed: why else—oh! why else, am I so weak?" and she wrung her hands in sickness of soul.

Paul, who had watched his opportunity, now, while the attendant had for a moment withdrawn, drew from beneath his vest a few sprigs of his favourite mignionette. "Take this, my child," said he; "lay it next your heart. It is the reseda of the ancients, potent to calm and appease all suffering, whether of body or of mind." And, as he bent over the sick girl to place the flowers in her hand, he whispered hastily in her ear, "Be of good cheer! I will watch over your Philip, and restore him to you, if it be possible. I have seen him, and I believe he bears a soul less unworthy than it seems. Take heart, but be silent. And now farewell," he added aloud. "But stay, you must purchase this charm in kind, or it will not yield one half of its proper virtues. I am sorry to deprive you of your favourite nosegay, but you must give me this meadowsweet to carry away with me; I have a use for it.

THE CHRISTMAS FESTIVAL OF FLOWERS—DRAWN BY GILBERT.

And keep yonder window open awhile; the air is heavy with its odour."

A silent look of rapturous thankfulness from Alice, and a stealthy smile on the part of Paul, and the Flower Magician passed out, to tread his solitary way back across the lonely moor. What this short interview with that mere child had cost him; what he had felt, and how he had subdued the emotions that almost mastered him; was known only to himself. The longing of the heart he had felt to fold her to his breast and call her his child; the thirst with which he craved—childless and mateless as he was—to watch over and shield her tender youth from harm, no soul may divine. Few, indeed, could they have known his whole history, could have fully sympathised with him. But Paul Corolla was, as Philip had said, no common man. Early disappointment had wrought nobly upon a noble nature: and, if now and then a momentary strain of bitterness came over him it passed again, and left him calm and enduring as before—trustful in Nature—faithful to himself.

It was a singular chance, but it so fell out that as Paul turned his steps away from that door-step, full of such hopeless longing of the heart, another mortal creature full of feeling as fervid as his own, and one whose destiny had formerly appeared to be woven with his own too closely for mortal hand to unravel, approached the spot he had just quitted. It was the mother of Alice Granstone. Strange, indeed, was it that, as that night's moon rose up clear and bright in the summer heaven, they two should stand, almost together, beneath the same broad belt of light—so near, yet oh! how far apart! Nineteen leaden years had sped on heavy wings since that same pair had breathed God's blessed air on that same span of earth. The same heavens—the same stars—were above them as of old; but they two, how were they changed! Each passed on, and knew not the other.

Little wonder was it that Paul had clung to nature as a child clings to its mother's breast: little wonder that he worshipped her—and her alone—in all her forms of wondrous beauty, looking upon her ever as the sole type of the Immutable.

CHAPTER III.

Informed with that elastic spirit which seeks and finds "good in everything," and inspired now by a new and engrossing object of interest, Paul began to experience an increased relish for life. He seemed to feel at last that he stood not quite alone. Human sympathies, which alone he had lacked, and, wanting which, even the exhaustless resources of Nature herself were insufficient fully to satisfy his being once more stirred within him. His whole thoughts were centered upon Alice and her lover. All the energies of his mind he determined to devote

to the accomplishment of one end—the reformation of Philip, who he rightly judged had been discarded by Alice on account of such habits and companions as those in the midst of which he had been discovered by the acute West Indian. Philip Tremenheere was yet very young, and Paul felt hopeful that to induce him to relinquish his present companions and their evil influence he needed only the substitution of some other stimulus—required only to be led by gentle means to engage in some better and wiser pursuit. All things appeared to favour his design. Philip had lost little time in renewing his visit to the Flower Magician. Struck by the originality of Paul's mind, he sought him again and again; at first merely to satisfy a restless curiosity, or, perhaps, with some latent hope of deriving counsel and aid from one whose frank and cordial bearing was so much in unison with his own. He soon, however, grew to like the man Corolla; and it was not long before a firm friendship sprang up between the two—a friendship rare between persons of different ages. But, though he had numbered more years than his companion, his mind, in acquiring its full vigour, had lost little or nothing of the freshness of youth. The greatest good promised to result from their intercourse. Not only did Philip find himself incessantly drawn to adopt the same modes of thinking as his friend, but Paul was soon able to lead him to enter heart and soul into his own tranquil pleasures. Vegetable chemistry became in a short time Philip's most engrossing and absorbing pursuit. Night after night the two might be seen employed together in the small laboratory into which Paul had converted one of the rooms of his house. Here, while Paul was busied in preparing decoctions of the various medicinal herbs and plants which grew in abundance about the neighbourhood Philip would perhaps be sitting, the blowpipe in his mouth, producing, with the aid of Nature's magic, a colourless glass, by the simple fusion of a wheaten straw.

Thus passed the remaining months of summer; and autumn drew on, ripe with its burthen of fruits. Meanwhile the fame of Paul Corolla had spread itself still further abroad, and people began to come from far and near, to see and judge for themselves what manner of man he was. Many burthened with some soul-disease, true believers in that lore which taught that the simplest wayside flower may be administered for "the comfort of the heart, and the driving away of sorrow," sought him for his simples. Others openly implored him to drive pestilence, by any means, the internal enemy of their peace, whose presence so much deformed and rendered life a hell.

One night, when Philip had left him, and he was about to relinquish his labours until the morning sun, Paul was startled by an apparition as singular as unexpected. At the moment when the negro boy was in the act of closing up the house for the night, a female figure, closely veiled, slipped past him through the open door, and entered at once unannounced into the presence of the Flower Magician. The manner of her coming struck Paul as that of one whose courage to encounter the reputed necromancer had failed at the last moment. His mysterious visitor remained standing in the shadow of the room, and seemed to gaze past rather than at him. It was impossible to trace her features; but the first sound of her voice thrilled through the soul of Corolla, and set the blood bounding through heart and brain like the rush of the Darkiver.

"I am here to seek your aid, Paul Corolla," she said. "Not long since you raised from sickness to health one whose love is my solitude, good and blessing. Whatever spell you called down on her, it was potent to heal and save, and worked as a miracle, swift and strong. Is the magician of those moors equally skilled to cure those maladies in the soul which waste its mortal frame to a shadow, thus?" and she raised from beneath her mantle hands

So wan and transparent of hue,
You might have seen the moon shine through.

"Both hands wasted hands," she continued, "and judge what my malady must be. The sickness under which I suffer is in my brain; upon which I am consumed with the constant pressure of one haunting thought—the constant recurrence of one miserable dream. One face, one form known and loved in early youth, is ever before me. Nothing can free me from it. As surely as the night comes, as surely comes this demon this nightmare of the heart. During my one short year of weakest life, the one thought was banished as a forbidden thing; but no sooner was I free than back the haunting shadow came, more constant, more terrible in its unsought presence, because once so forcibly shut out. I strive against it; I battle with its despair; in my waking hour I task myself with books; I labour with my hands; I go abroad into the darkness. All is unavailing. Speak! What can you do for me?"

Breathless, and exhausted with the passionate energy with which she spoke, Paul saw that strength failed her. "Take this," he said, while he poured from a phial an infusion he had just prepared. As he did so, he contrived to change his position, so that the light should not fall upon his face. His voice was husky with emotion, and scarcely needed an effort he was evidently making to disguise its tone. Something in his manner possibly struck her as singular; and for a moment she hesitated to accept the offered draught.

"Fear not to drink," the infusion is simple: an ancient remedy, sacred to the memory of its discoverer, Gentius of Illyria. Its virtues are alike prized by the hardy Swiss, and the more fecule natives of our West Indian Isles. Have faith, and drink."

But the cup fell from her hand. "That you have visited those far-off Isles, I know," she cried. "You are said to have spent a life there. Tell me where—in which of those distant islands you have been a dweller?"

"In the Island of Humming birds,' as we call it there," answered Corolla. "You know something of it?"

"Trinidad!" And she drew closer to Paul, that not a word, a breath of his should escape her. "It is a vain, vague hope, I know," she cried, eagerly; "yet it was this hope that half lured me hither. Can it be? is it possible that you should ever have met one who lived and died there? Some woman's name was——" But she could not utter it.

Taking a letter from a drawer, Paul bade off the signature and placed it before her, saying quietly "That was the man."

Florence Cranstone—for it was indeed the mother of Alice—did not start or faint. But her eager eye clove to his words. She believed him to be a magician, now, in truth; and, filled with a degree of awe that held her spellbound, she motioned with her hand for him to speak further.

"I knew him well," he said, "none better. I was his second self: he never laid bare his inmost heart before me. He had been early disappointed; but he learnt to bear the ill like a man. He had loved and wooed among these very moors. Lowher to him was the fierce mountain storm, sweeping yonder moorland ridge, than all the glowing, sunlit gardens of the Islands of the West: dearer to his ear the burr of the wild plover's wing, than the flutter of plumes flashing like living gems through the tropic air. But he is at peace: what would you more?"

"Nothing: my soul is satisfied!"

She turned to go; but Paul arrested her step on the threshold.

"Yet a moment stay," he cried. "To one haunted as you profess to be, such comfort as I have given is little. What if my power extends further? Are you prepared for all that it might reveal to you?"

"A riddle—a rything of him! But oh! what can bring rest to the one murderous, torturing thought, that he died;—died, lonely and forsaken, ever singing that I too was betrayed even more dreamily than he? He was slandered before I was false!"

"How? Slandered?" exclaimed Paul, in a tone that made Florence Cranstone start, and sent a knell through her heart like a voice from the dim of grave.

"Even so! They told me he had wedded. That falsehood was proved—too late!"

"Too late?" returned Paul, as he sprang to her side. "Too late? Never, never while there is life and truth, is love too late! Florence, my Florence, my own lost love!" and Florence Cranstone fell like one dead upon the strong heart of Paul Corolla.

CHAPTER IV.

Were this a tale of younger loves it might well close here. But the shadows of a life are like the moorland mists, not to be swept away with one light breath, or curled heavenward at the first call of the sun. No heavily did the past still press upon the memory of Florence, and so difficult did she find it to realise the strange change which had fallen upon her life, that she yielded to an impulse it was impossible to control, and for a time almost entirely withdrew herself into the seclusion of her own home, to ponder upon the present, and gradually accustom herself to the contemplation of the possible future. Unsatisfactory as this was to Paul, he made the less opposition to it, since he saw clearly that nothing but entire repose of mind was likely to restore that healthful state of being without which life is but a burthen to its possessor. Out of themselves, too, and apart from their own individual cares, they had each sufficient food for thought; and plans for the happiness of Alice and of Philip soon engrossed them both, almost to the exclusion of every other object.

Winter had now set in, and was drawing on with swift pace. Rimey frosts sheathed the thorned spikes of the golden moorland grasses; and silver snows deepened on the hills. Vegetation became scant about the rock-bound pastures; and solitary sheep tracks mapping the upland ridges showed blank and bald along the far white slopes. Cattle sought the shelter of leaf-bare boughs; and the stonechat and the water-ouzel bid themselves away in clefts of the unhewn rock. The year was indeed in its wane, and Christmas, with all its gracious and hallowed associations, was at hand.

And the genius of Change, which showed itself everywhere, took new forms of wonderment in and around the dwelling of the Flower Magician. If before he had been accounted a necromancer, on the bare evidence of his scientific researches, what now was likely to be the gossip's tale, when through a show of real and tangible magic was presented to their eyes?

When first the winter came heralded by storms to the inhabitants of those wide-spread moors, numerous workmen—evidently brought thither from a distance—were seen busily employed about the domains of Paul Corolla; altering, enlarging, glazing and roofing, dismembering and transforming hothouse and garden, homestead and orchard. No expense appeared to be spared in forwarding the work, whatever that might be, which was thus going on, filling all at once with the sounds of busy, working life the erst quiet precincts of the magician's home. And, as one prevailing idea is sometimes driven out by another, so Paul's former reputation as a wizard was suddenly forgotten; and, in place of the old tradition, he now came to be regarded as a miser, or an alchemist! Whence, if not from some such source, could all this sudden exhibition of wealth arise? Loaded waggons made their appearance day by day; and what added to the mystery of the whole was, that these were never unloaded until the early winter twilight had set-in, and then only in secret. Still, enough was visible to the eyes of the curious to fill the mind with wonder. As if touched by the wand of a genius, the wizard's domain became in a short time transformed into a scene unsurpassed in the realms of Fairy. And as the gracious Christmas-tide drew nearer and nearer, there arose a structure so rare, so delicate in its design, so beautiful in its choice adornments—little wonder was it if the simple inhabitants of those sequestered hills lifted up their hands in awestruck wonder and bewilderment.

At last dawned the eve of the great winter festival of the year. And did Paul, the lonely liver, the man without kindred and without friends, did he become all at once a man of the world, a mere hollow guest-receiver? Not so: the Christmas feast of Paul Corolla was characteristic of the man. He caused it to be given out far and wide that the Wizard of the Moors would throw wide his doors on that most blessed festival of all the year to the poorer inhabitants of his native wilds. The moorland children were to know what a Christmas feast-day meant for once in their lives.

Wide flew the gates. And what a scene of enchantment opened from within upon the delighted senses! Stretching away through far vistas, trellised over with the creeping foliage or the violet bearing ivy, rose pillar after pillar, clasped by budded branches of the hundred roses of China. Grouped clusters of evergreens a adding the long smooth-rolled floors more bright with glossy boughs of viburnum, fresh as if newly uprooted from the classic ground of Mount Atlas. The scarlet pyracantha and the ruddy winter cherry vied with the crimson berries of the pointed holly. There, too, was seen, in wild profusion, the far-famed Christmas rose—the fabled lunatic-curing shrub of Anticyra; while the aloe and the palm, with many another plant of wonderous growth that adorns the teeming earth, spread here their various fonage—ministers to the one great season's joy; till the pulse of the full human heart thralled with a love of the beautiful, and soul and sense were satisfied.

Down every alley were ranged benches groaning under a weight of the good old Christmas fare. There the sire and the maiden, sere widowhood in its fading and rosy childhood in its bloom, youth in its glory and old age in its repose, all snared that Christmas wassail in the wizard's fairy hall. Nor was the poor black boy forgotten amidst the joy of the "pale faces."

There, too, strayed Alice with her Philip, severed now no more. The promised bride of the New Year, she moved through the lengthened aisles, a coronal of orange-bloom encircling her beaming brow.

Not far apart sat Florence, with Paul by her side—her long-treasured, never-forgotten love—the Paul Morris-like of her youth—our Paul Corolla! It was not without significance that Paul had placed her near to that same spreading orange-tree, luxuriant in its fruited ripeness, and lovely in its yet lingering bloom, from which her daughter's bridal crown was torn. Restored health on her cheek, and renewed joy in her eye, Florence was perhaps the happiest of all that happy multitude. Full of dearest, tenderest associations was this Old Year's closing; and if, for her, a shadow of mystery hangs upon the probable issues of the Coming, for an answer to all such delirious questionings of the heart—all such wild and dreamy doubtings of the soul—she has only to consult the Flower Magician.

A CAROL FOR CHRISTMAS.

On Christmas morn, in olden times, though snow lay on the ground,
And icicles hung by the wall, the minstrels went their round;
And sang their carols, warming maids and mistresses to rise
Betimes upon that holiday, and bake the Christmas pies.

Nor was the warning lost, I ween; for, though the day before
The pies had been already baked, there wanted something more
To grace the board up on that day—plum-puddings, custards too;
Besides the huge sirloin to roast, they had enough to do.

The dinner o'er, the grace-cup served, round went the wine and ale,
And jovial grew the company—none told a merry tale,
While others sang a roundelay, until the sprightly sound
Of music warned both great and small to dance a merry round.

Sir Roger led my lady out; the young squire danced with Sue,
The bonny, buxom dairymaid; the parson he danced too.
Now in, now out, they jigged about, each Jeannet with her Joe;
And all the maids again were kissed beneath the mistletoe.

England was merry England then! and still we've "cakes and ale;"
So at this season, as of old, let honest mirth prevail.
And let the wassail bowl go round, and sing with heartsome glee,
"Since Christmas comes but once a year, we'll merry, merry be!"

STEPHEN OLIVER.

CHRISTMAS-EVE.

1851.

"The very noblest heart on earth has oft
No better lot than to deserve."

It is the coldest hour that precedes the dawn; it is the coldest season of the year that ushers in the annual advent of the Morning Star of heaven and earth. Christmas-eve to the poor mendicant and his brother is cold to bitterness. The houseless have travelled far, crunching the winter-snows with their ill-defended feet.

Cold blows the winter's wind;
But 'tis not more unkind
Than man's ingratitude."

The hewers of wood and drawers of water render good service, for which they are ill repaid. Unremunerative labour passes a dreary time.

Work without hope draws water in a sieve.

But Christmas is proverbially bountiful; and the weary anticipate the benevolence of the season with inward satisfaction. Nor, on Christmas-day, and Boxing-day after, are the wretched likely to be disappointed. But, Christmas eve! It is a season of transition; and, like all such periods, is painful—peculiarly painful—has a pain, indeed, peculiarly its own. It is a time of preparation. The morrow's banquet occupies all thoughts, and lapses the present in the future. Charity is yet in her nonage—a few hours, and she arrives at her majority. Meanwhile the winter wind blows keenly cold, and those who need instant charity, unconsciously neglected, seem as they might perish of despair. Haply, to the poor wanderers, passing some patrician dwelling, gleams of the cheer within come through the ample windows, typing the warmth and comfort as well as the light of the interior, and mock ogly contrasting the desolation and the darkness of the road without. With saddened glance, the boy eyes the radiance, and, picturing in the apocalyptic vision of his mind the abundance of a happy home, permits his lips to forget the bread of penury with which he had just appeased his hunger; or, if they remember it, the comparison makes still more coarse and hard the meagre fare that preserves but not nourishes the mere pauper existence, in which if the unprosperous may be said to breathe, they cannot be truly said to live. True life is not mere being, but well-being; and none truly lives but he whose welfare is secured, being provided abundantly with whatever is needed for the sustenance of the body, and a cheerful state of heart and mind. Ah! that poor mendicant lad lives not, if life be enjoyment, his very faculties of life are rudimental, yet scarcely conscious of themselves—as much as they can do to exist at all: but, touching their vital activity and joyous exercise, the chill hand of convention oppresses and prevents their development in the unfolded form. Those same gleams, that same radiance, for a moment are reflected in the countenance of the unhappy. In the boy's, something like a smile is generated; but the sister's becomes still more sad. A dolorous orphanage, indeed, is hers.

And the statist has proved that in every given population there must be a certain proportionate number of the destitute—that is, under existing social arrangements. Philanthropy has conceived the idea that by improved arrangements, and particularly by education, the number may be greatly diminished. And this idea men have associated to carry out and realise in new forms of social life, and better institutions than those that satisfied our less enlightened fathers. Efforts of this kind are, indeed, the character-marks of the age in which we live. But these effects regard the future; the present has to bear not only the penalty of past misconduct, but the throes of coming improvement. These, as well as that, are painful—full of the pain of transition. The present has been the year of promise, the year, also, of fearful omen; howbeit, to the enthusiastic, it has been the Christmas-eve of the world—the vigil of a hoped-for happier time.

In acknowledgment of the dignity of labour, a Crystal Palace has been edified, its foundations laid in princely appreciation, and its columns reared by public munificence. A Palace? nay, a Temple; for in it the voice of prayer and praise was heard, from prostrate lips; and the workmanship of human hands was devoutly commended to the guardianship of a superintending Providence. Nor in vain; for the lesson prospered exceedingly, and the consecrated industry of the world commanded the admiration of assembled myriads. To that Temple of Glass came the powerful and the feeble, the rich and the poor, the old and the young, the mighty and the sage, the ignorant and the sciolist, the fair and the brave; all came thither to pass their judgment on man's works—to see more than they, more than the wisest, could understand, and then to pass, themselves, away into the obscurity of private individuation, awaiting that final doom when each, according to his works done in the flesh, shall be equitably judged in the spirit "by that Man whom He hath appointed the heir of all things."

That Palace—that Temple, commemorative of Spirit's victory over Matter, reminds us of the tower built, according to the poet, in "the Angel World":—

Here let us build, said he, a Tower of Light;
That all upon the farther side may know
We have in safety crossed the flood. Himself
Paced the fennel ten-stone, and, one by one,
Masses of dazzling amant, which starred
The shining shore, like flowers that fringe the banks
Of woodland brook, they piled up altar-wise
At his command. On every stone engraved,
In gloamy darkness, was the name of God;
For every star a stone; and every name
A separate title symbolising love.
A sheaf of lightnings on the head he placed,
Which with the skies innate communing held,
And barred in correspondence. Thus was all
With the pure blessing of perfection crowned.

There is a law of development, and that of human progress acts in obedience to its nature. It is not by preaching the folly of war, and the wantonness of capital punishments, that either can be abolished; but that the Spirit of Humanity gradually unfolds itself to conditions more blessed and still more blessed, until what was once Christian theory becomes Christian practice. Preaching is but prophesying;—respects the future not to-day;—the voices of a Christmas-eve, that promises good cheer on the morrow, but neglects, on the vigil, the famishing mendicant; saving truth, though for a brief while, the soldier to his sanguinary trade, and the man to his hateful office—both "*honourable* murderers," if you will.

The despot world is passing; the tyranny of the Continent must ultimately melt away before the warmth and radiance emitted from that House of Light—that temporary Home of all that was glorious in thought, in invention, and in art. But desolate are now those once-filled halls! No longer the Koh-i-noor, the Mountain of Light, shines like a revelation, half bright, half dark, a crystalline world, but is restored to its place in the palace of marble, whence it was brought to grace the palace of crystal with its kindred lustre. No longer the form of Beauty, Grecian in mould, yet manacled, pleads against the country

that produced her, though she disdains to return to transatlantic shores, the shame of freemen who respect not freedom. No longer in nave or transept, aisle or gallery, shall bust of poet, sage, or hero, or statue of god or demi-god, Amazon or maiden, man or animal, or group of sculptured figures in harmonious combination, compel the spectator of taste, despite the Horatian precept, to admire. The kingdoms of the world, each represented in its compartment, have remanded their several quotients from this grand array, not of arms but of arts. Here we had the nations of the East and the West, of the North and the South, all compressed into separate spaces, and forming portions of the World's Palace—the world's epitome. No more the multitudes of all peoples may be seen from that far gallery defiling, a sea of heads, along that wondrous nave—a countless number of admiring, marvelling men, women, children—all conscious of a miracle in the magnificent edifice and its gorgeous contents. Believe they in its permanence? or is its speedy doom even now spoken? Have they melancholy forebodings? Is, then, the earth so poor she may not sus ain for long so costly a burthen? Is she still mendicant, and this her palace-temple, once divested of its treasures, but her idle offspring, to be discarded like a beggar's brat? Look we then again on the picture—Christmas-eve!

Contemplating afresh that melancholy sister, who can help thinking that she, were she depicted as somewhat older and matronly, with her basket of sticks gathered from the hedges in the suburbs, might stand a fitting symbol of our great mother, the Earth—this sad world which we have hitherto done so little to enrich, so much to impoverish? That Crystal Palace, whose removal has been threatened, serves to show of what she is really capable—what man may make of her *matériel*—how much, indeed, has been made, and to suggest how much more might be. Some of her ungrateful children, however, start back, as if alarmed at the aspect of industry, and what should be venerated for its beauty repudiate for its terror. Privilege would plead for its own indolence, and not recognise too suddenly the claims of the Worker. It talks of reaction, and already prepares resistance to progress, as if "the good time coming" could come too soon. Why should it not come to us? Why should it be deferred to our posterity? With what glorious garniture might we, even we, here and now, invest this seeming pauper-earth, if free way were given to Diligence and Genius! How might she be presently robed and crowned! What gems, what flowers, to make an Empress of *her*, who long has appeared a widow, while evermore of her best son—

> ——the soul
> Seem'd shed upon the universe, and grief,
> Dependent of its separate sadness, clung
> To the stupendous detour of all things,
> And wept with the great mourner.

Why should the Reactionist dread the expiatory sorrow of a Kossuth? and deny to "the august maternity" of Rome the long-expected day of her deliverance from superstition and misgovernment? Why will they not aid to unbind

> Andromeda? She was not born
> To stand and shiver in the northern blast,
> Or fetter on a foreign rock or bear
> Rude license of the unrespective waves.

Recovered from the marvel reverie in which the reminiscences of the Crystal Palace cause the soul to slumber, who confesses not, in the expression of the highest hopes for the world's future, measured by her capacity, that each becomes a Dreamer? Ay, but that which is one man's dream is other men's work. In those, the labours of many hands that so lately filled those Crystal halls, were the dreams of many heads embodied—and now that they have vanished, in fancy, are they transfigured back into dreams. Such are the mutations and the relations of thoughts and things. "Thoughts speculative" and "certain issues!"

Future utilities belong to that magnificent edifice, and more particularly to the idea in which it originated, if suffered to remain or to prevail, and to be fully occupied or realised; if not, that pauper mother's beggar son not more idle, not more useless, than either. It lies in destiny whether further account shall be made of them or not. So likewise of him. Such a proportion of the populations of the great cities of the earth must be as he, without employment, without subsistent means. What individuals shall compose that proportion, depends more on fortune than on virtue—on accidents of birth, position—accidents of all kinds—and sometimes, but rarely, on volition. While full of the world's gifts, that Crystal Palace resembled Intelligent Labour actively employed; now emptied, it resembles the would-be labourer refused the privilege of work. For, to the mendicant and the criminal, it is a privilege refused. Enough of food and clothing has been raised without their aid, and might be theirs to appropriate, had they but the means to purchase: these they have not, and therefore must obtain those without purchasing, which, by other means, legal or illegal, to a certain extent, they do; and then what is left over, and much does, perishes for want of wearers and eaters. But, whatever statists assert, the mind refuses to acknowledge a moral necessity in this condition of things; and still, hopes, that by the better distribution of means and produced wealth, every appetite may be satisfied, and every back that now goes bare may be covered. The destiny that coerces is but the will of the powerful minority in states and churches; and, if those that govern were to will it otherwise, the requisite distribution might be readily accomplished. It lies equally in such will to decree that the Crystal Palace shall still continue the Temple of Industry; and that the children of the mendicant shall no longer beg, but work—no longer breathe only, but live.

That "the poor shall never cease from the land," is not Heaven's decree, but man's. And some of the elect among men have seen that the case is so; but their efforts avail not yet. As yet, it is but the happy world's vigil—the Christmas-eve of time.

Every idea, however, is prophetic of its own realization. Even so is this. To-morrow what is now but conceived shall be begotten. The advent of thought and of deed—the nativity of the heir of time—the festival of the greatest birth—these belong to to-morrow. To-night the chill wind pierces to the bone the unprotected and the orphan—though partly cheered, it must be confessed, by the signs of coming festivity. To-morrow they may partake the joy of the day. Some "stray pleasures" may find their way to them. But to-night the bitterness of the cold without is enhanced by the sense within of right denied; the melancholy fact of labour having become a personal privilege, granted to many, but refused to him who would but cannot, being forbidden or prevented.

That destitute lad, so helpless in his destitution, would work, could he but find it, and were he capable of it; both, hitherto, have proved impossible to him, and may to his dying hour. Many have so lived, so died: but, as we think, things shall not take this turn much longer. And here it is that this world's Christmas-eve this entire year that we have passed—has been to some a year of fearful omen, as well as to others a year of hopeful promise. The former would preserve continental tyrannies and French Presidencies, to avert, or delay for a while, the inevitable change. Louis Napoleon would make common cause with them; but, to secure the result, must, nevertheless, call on Universal Suffrage, and conciliate Red Democracy. Strange union of means and ends—not insignificant, as we take it; and its significance may be read by those who are not over wise—by a Solthorp, as by a Palmerston.

Meanwhile, these vain terrors of the tottering may serve to prolong the period of transition, and to intensify its peculiarities. War has not yet been declared wholesale murder; nor capital punishment manslaughter in detail. Carnage and Victory, mounted on battle coursers, and decorated with honours, still triumph, and crown Death with glory on the field of groans. Nay, in the streets of cities, they have had hecatombs of victims, defiled palaces, and pillaged temples. The Eagle yet is deified in Gaul. The Lion in Albion is yet adored for bloodshed; and the nations of the world await the bond of his slumber, that they may arise and slay. Alike despotism and freedom yet appeal to the sword. Fraud and violence, still hand in hand, range over the globe to despoil and subdue. The desert crieth out with a voice and the finger of the Arab pointeth

> To the caverns of the dead—
> To the grottoes of Dahara.

And yet the terror of the massacre fills the soul of the Kabyle, and the tribe of Ouled Rahs execrates the name of Pellissier. But a voice from the Punjaub also arises, and the waters of the Sutlej are red. Frank and Sikh, with the war steed, lie confused on its banks, and murmurs are heard in Lahore: "Thus Britain rules in the East; and of her Christian people the sceptre is the sword." Ah, surely the God of Battles, Mars or Odin, should no longer be worshipped, by those who would teach the Mahomedan how to live! Even on this Christmas-eve his ascendancy is disputed; to-morrow hope we that it may be subverted. Not in vain lived William Ladd; not in vain exists the league of universal brotherhood; and the olive of peace shall ere long supplant the laurel that yet enwreaths the victor's brow. Other and better conquests shall succeed, which acknowledge the dove for an emblem, not the eagle. And then shall we turn from the gibbet to the cross; and, like Him who there suffered, "desire not the death of a sinner, but rather that he should turn from his wickedness and live."*

The law of development shall succeed, even though ancient prejudice should decree the removal or destruction of the Crystal Palace, or suffer it to remain idle and empty; even though it should deny to the ragged urchin and the untaught girl the right of labour and the privilege of education, which makes employment facile.

Awake, spirit of Wordsworth, and in that poor boy's immortal soul recognise a Crystal Palace of divinest possibilities.

> What laurell'd impotent shall show his head
> Beside that uncrown'd giant!

Thank the merciful and ever-provident Heavens, already the poor and the ignorant are taken out of the hands of old and in habits of privilege; already to-day is the vigil of a happier morrow.

> To-morrow, and to-morrow, and to-morrow,
> Creeps in this petty pace from day to day,
> To the last syllable of recorded time,
> And all our yesterdays have lighted *fools*
> The way to dusty death.

Let it be so no longer. Let us no longer be fools, so enlightened. Let our yesterdays not have been in vain. Let us gather Experience from the Past, and declare at length Harvest Home. It is time—it is full time. Even on Christmas-eve we may be charitable, and might be, if we made not too much account of the morrow. Even on this vigil we have duties; and, in the midst of our preparations for a happier future, we should respect the present. Let us work while it is to-day; secure now our own happiness, and that of others. Benevolence neglects nothing, scorns limitation, and looks abroad as well as at home. Let us on Christmas-eve be studiously charitable, and thus entitle ourselves to be merry on Christmas-day, and happy for the whole of the New year ensuing.

H.

* We have been much helped in these reflections by a little book of "Peace Lyrics," by H. G. Adams, laudable both for poetry and sentiment.

ADONIS AND ADONA.

A TALE FOR CHRISTMAS.

THE AUTHOR OF "THE PLEASURES OF GENIUS."

ILLUSTRATED BY THOMAS.

PART I.

Conscious waves, astutely,
Rejoiced, tumultuous surging;
—By the seashore, mutely
Sate the lonely Virgin;
While thy murmurs, Ocean,
Sported with the breezes,
Music of their motion
Making—such as seize
Spirits when they feel inspired—

Thus sitting, unadmired,
To watch the foam Adona seem'd,
While it mantled, curl'd, and cream'd.
Its spray once shed, 'tis shed for ever,
Passing away, returning never;
And where it brake, and tumbled o'er,
Another still, for evermore,
Grows to a ridge, and frets and frets,
And melts to vapour; all regrets
Forestalling for the passing by
The coming,—borne with ecstasy,
In endless series, like a chase—
Each eager for the former's place.

In maiden meditation, shy
(Adona) sate; alone, fancy-free,
Felt like a weed upon the shore,
Flung from that sea, unclad, forlore.

What mortal, girt with regal vest,
Crown'd with the myrtle for a crest,
With springy step, now treads the lea,
As pleased with sand, and sky, and sea?
Who knows him not? Adona—he
Who is—just what he seems to be—
The glorious Monarch of the Isles
(O happy band! O joyous troop!)
That bask within the summer smiles,
And make with this a sister group.

What stays his step? In mute amaze,
That maiden stops across his gaze.
—But, as he look'd, a darkness lour'd,
And shadows deep'ned on her brow;
With terror or with silence overpow'rd,
She turn'd to flee—but where am I now?
She turn'd to flee, but, worn and weak,
Sank on the beach, and could not speak.
Then, in the heart, Adona's sprang
Pity, and, like a fount in sand,—
A soft and clear and silvery song,
Running its pebbly bed along,
Which, save in stillness and in shade,
No sound unto the ear had made.
That royal soul the whisper heard,
And, soon to love by pity stirr'd,
The Monarch scanned the maiden's face,
With marvel at the expressive grace
That life to every lineament
Significance and lustre lent.

Then words he spake, to soothe and cheer,
And heard her soon of shame and fear;
And heard her simple tale, in part—
The rest he guess'd at, by the heart.

"On some far isle, hid in the deep,
Couch'd on a bank of flowers asleep,
A pirate crew, with purpose dark,
Had seen, and then on board their bark
Conveyed her, meaning to enslave:
Pursued, they tow'd her to the wave;
And hither, floating with the tide,
More like a corse than living creature,
The billows bore her, in their pride,
Unbidjured or in form or feature."

Her voice, her air, the Monarch moved.
He look'd, he listen'd, and he loved.

PART II.

On golden throne, in marble hall,
Adona sits Adonis by;—
It is a day of festival,
Of masque and of revelry.
Adonis they call the day,
Whereon who would might idly play,
And sport his jest, and boast his say,
Follow his fancy, and have his way;
There was none to curb with nay—
The world was a fair, and all were gay
Ever at this Adonis.

In royal robes the bride was seen
Adona—elected Queen
Beside her, and not far above,
An image of immortal Love,
Adonis, with his eyes of fire,
Lit up his hues his own desire;
And, while her cheeks with blushes glow'd,
Her beauty awed the ignoble crowd.
There were his altars, there his shrine;
And all he worshipt was divine.
—The likeness of himself he saw,
And in the mirror look'd with awe.

And, thus caress'd, and worshipp'd so,
The woman took a goddess grew,
And greater felt than she might know—
The lovely and the deathless too!

Her eye of pride Adonis read,
And, fill'd with more of love than dread,
Exulting said:
"Now, by the Sun!
Wanderer than wit,
That shall be done,
Or grace or guilt——
Speak! I have thy will, my goddess-bride!"

"I see the wine-cup by thy side,
The liquor mantles to the brim,
The beads upon its surface swim,
Each globule is a world of pleasure,
They run a race, they dance a measure,
And, like the planets in the sky,
Have their own stellar harmony.
Merrily, merrily the dimples laugh;
And fain—how fain—would I the goblet quaff!"

A gloom upon Adonis fell—
"This goblet wouldst thou taste? 'Tis well!
The shoulders fit them to the yoke—
An oath once vow'd who can revoke?
The draught be mine; I will not tell
The magic charm, the wizard spell,
That magic is there, lest thou shouldst lose
One joy, and deem that I refuse.
My love to me is more than life—
My mistress, bride, my queen, my wife!"

Then in his arms Adonis took
Adona, and upon her lips
Impress'd a kiss, and shed a look
Into her eyes, they scarce might brook,
Bright as the sun's ere his eclipse.

This done, for Love had made him brave,
The wine-cup to her hand he gave,
And smiled well-pleased—so best might he
Her bosom of all doubt set free.

Within her small white hand
Adona took the cup,
And held it to her lips so bland,
Till drank the red wine up—
O the rapture! all a-tremble,
She the joy would fain dissemble;
When, from her unsteady grasp,
Escaped the bowl, and sadden fell—
Oh, late 'twas whole, within her clasp!
Now, broken, lo! the fragments tell—
What? that Adona loved too well!
He knew, not she, the oracle.

PART III.

"When the bowl shall be broken,
Ere the rite can be spoken
On the Death-loss the deadly shall be wyrroken!"
—These were the words the Flamen aloud
Exclaimed, advancing before the crowd
Into the presence.

The sound appall'd.
Adona's senses were all enthrall'd,
And pale she stood in the midst of throngs.
Ceased on the sudden their sports and their songs,
While the stern Priest said, in the silence dread:—

"One moment, and religious wont,
With ceremonial order fitting,
Had taken from the holy font,
The while your hands in bonds were knitting,
The sacred chalice, and to thee
Presented it with sanction free.
But thy impatience has outrun
The pious rite, and evil done,
That had been good, had the form been so—
Wherefore the bridal we forego.
Wake from thy trance, too much adored
Adona! look upon thy Lord!"

Obedient now too late, thus chid,
As she was bid, Adona did;
And look'd upon Adonis, whom
Some horror seem'd to wrap in gloom.

It pass'd, but left within his eye
A wildness, as of phrensy,
And forth his trembling lips there came
Breathing thoughts and words of flame,
Like the levin from a cloud.

"To the chase! to the chase!" he cried aloud;
"The deep-mouth'd bay of the hounds I hear!
The sound in my soul is a sound of fear!
For they are the hounds of hell, I wis,
And their prey they never miss,
Ha! which of us are they pursuing?
They goad the boar to my undoing!—
Hold back! hold back! Oh, fatal zeal!
His tusks within my side I feel!
No rescue! none! By Heaven's decree,
Adona! thus I die for thee!"

While thus he raved, his visage, act,
In agonistic gestures fit,
Symbol'd to every sense the fact,
His words described, performing it.
And when he ceased to speak, he fell,
As smitten by a sudden spell.

Adona look'd upon her Lord;
Adona, the too much adored,
Gazed, as her eyes, that would not weep,
Might from their stiffen'd spheres outleap.
But, in the madness of that hour,
The Flamen's words had healing power:—

"On thy dead Lord thou lookest here,
Whom love for thee has slain;
Whose absence thou must learn to bear
Till his life come back again.
His love than death is stronger far;
Yet doom'd with doom to be at war,
He still shall conquer, but to be
Again subdued, for ever and aye:
Six moons on earth res ored to thee,
Six moons spent with Proserpina."

Adona heard; then stoop'd, embraced
In her two loving arms her Lord,
And wept the tears her beauty graced,
Too much beloved, too much adored.
Wherefore it is that, evermore,
When WINTER is, like the furious boar,
Slays the bright SUN, and NATURE all
Wears a white shroud, a snowy pall,
The Syrian damsels mourn thy death,
Adonis! but with hope and faith,
Expectant of thy resurrection;
When Earth, because of thy affection,
Anew shall blossom and shall bear;
Dying and living every year.†

† The fable of Adonis, the young favourite of Venus has been thus explained: "Adonis, or Adonai, was an Oriental title of the Sun, signifying Lord; the boar supposed to have killed him was the emblem of Winter, during which, the reproductive powers of Nature being suspended, Venus was said to lament the loss of Adonis until he was restored again to life; whence both the Syrian and Argive women annually mourned his death, and celebrated his restoration." The manner of treating the subject in the text is perfectly original; a novel invention humanising the old argument.

ADONIS AND ADONA.—DRAWN BY G. THOMAS.

THE STREET CAROL.—DRAWN BY PHIZ.

THE STREET CAROL.

ILLUSTRATED BY PHIZ.

Now, too, is heard
The hapless cripple tuning through the streets
Her carol.'

The humble harbinger of Christmas is again at our door. The busy year has rolled away; its industrial wealth has been gathered, and again dispersed; and, possibly, the return of the sublime season may be unusually welcome, with its observances, sacred and secular, its troop of mirthful games and little painted pomps. Yet the grand spectacle had its sweet uses attempered: the Great Exhibition was opened and closed with prayer and thanksgiving; and the Crystal Palace enshrined amidst its treasures a CHRISTMAS TREE!

The celebrations of Christmas are still rife among us. Its stream of joy is not narrowed, but more equally diffused through society; and, although much of the custom of profuse hospitality has passed away, Christmas is yet universally recognised as a season when every Christian should show his gratitude to the Almighty for the inestimable benefits procured to us by the Nativity, by an ample display of good-will toward our fellow-men:

What comfort by him doe wee winne,
Who made himself the price of sinne
To make us heirs of glory?
To see this babe all innocence,
A martyr borne in our defence—
Can man forget this storie?—BEN JONSON.

It is, however, an error of the day to deplore a falling-off in Christmas commemorations; whereas the enjoyment has but assumed a healthier tone. The Past is ever more picturesque than our own age; and

'Tis distance lends enchantment to the view.

We delight to sit among Elizabethan tables and seventeenth-century chairs, which carry the mind's eye back to a period far more poetical than the present. We stroll into the Great Hall at Westminster, wherein our Plantagenet Kings feasted at Christmas and Epiphany:—

Th s is the place
Whence even now the tumult of lond mirth
Was rife, and perfect in my listening ear.

But, step into Whitehall, and there you will see the Lord High Almoner distributing the Royal alms, as he was wont to do centuries since; at Windsor the Sovereign is herself superintending the distribution of her seasonable bounty; the Lord Steward fills the hungry prisoner with good things; the good cheer shines upon Ragged Schools and other havens of charity; and civilisation carries its luxuries into almost every family throughout the length and breadth of the land. The moderation observable in our times is more conformable to the precept in that homely work, the "Whole Duty of Man," enjoining us not to make the day "an occasion of intemperance and disorder, as too many who consider nothing in Christmas and other good times but the good cheer and jollity of them."

It is a sign of this more gracious and hallowed tone that the singing of Carols at the coming of Christmas has increased of late years; and the revival has the effect of bringing before us many an individual instance of wretchedness and privation, which must enlist the wide-spread sympathies of the season. The Carol-singer whom the Artist has portrayed is a type of this phase of our metropolitan population.

The Christmas Carol, though not precisely in its present form, is of very remote origin. Jeremy Taylor figuratively remarks, that the first Christmas Carol was the hymn of the angels to the shepherds on the plains of Bethlehem:—"Glory to God in the highest, on earth peace, and good-will to men." Milton, also, thus mentions the same anthem:—

His place of birth a solemn angel tells,
To simple shepherds keeping watch by night;
They gladly thither haste, and by a quire
Of squadron'd angels hear his carol sung.

The Christmas Carol was not, however, confined to the Church offices in the mediæval times. "It has been the custom," says a modern writer, "for the common people of England, *for many centuries*, to go about in bands at an early hour on Christmas morn, serenading their neighbours with what are called 'carols.' These ditties even gladdened the festivals of Royalty; for, when Henry VII., in the third year of his reign, kept his Christmas at Greenwich, in the middle of the hall sat the dean and those of the King's chapel, who, immediately after his first course, 'sang a carall.' A manuscript in the British Museum, however, carries the practice to the Anglo-Norman times, in the Carol commencing with—

Now lordings listen to our ditty,
Strangers coming from afar,
Let poor minstrels move your pity,
Gives us welcome, scathe our care.
In this mansion as they tell us,
Christmas wasse l keeps to-day:
And, as king of all good fellows,
Reigns with uncontrolled sway.

The earliest collection of Christmas Carols supposed to have been published is only known from the last leaf of a volume printed by Wynkyn de Worde, in 1521. It contains the celebrated "Carol bryngyng in the Bore's Head," which, with innovations, is sung to this day at Queen's College, Oxford. (See the Engraving of the ceremony in the ILLUSTRATED LONDON NEWS, No. 243.)

The majority of these early Carols were, however, religious; and many of them appear to have been even of earlier date than the Reformation. But some of them have been handed down to us in an interpolated state, as in the quaint old ditty beginning—

Joseph was an old man, an old man was he,
And he married Mary, Queen of Galilee;

which was sung by companies of little children, and which brings fairly before us the paintings of the old masters, where Joseph is always represented as so old a man, and Mary sits in the oxen's stall, with the crown on her head:

As Joseph was a-walking, he heard an angel sing,
"This night shall be born our Heavenly King;
He neither shall be born in heusen ner in hell,
Nor in the place of Paradise, but in an ox's stall."

Very melodious, too, is the rhythm of the Carol beginning with "I saw three ships come sailing on," and containing this verse:

And all the bells on earth shall ring,
On Christmas-day, on Christmas-day;
And all the bells on earth shall ring
On Christmas-day in the morning.

The two following verses are varied with—

And all the angels in heaven shall sing,
And all the souls on earth shall sing.

The Anglo-Norman *feste-chanson* we have already quoted is more an incitement to Christmas revelry than a picture of its holy joy. Another of these secular Carols has been discovered in a MS. of the time of Henry VI., though the song itself is probably of a century earlier. It relates to dressing the halls and chambers with evergreens at Christmas, from which ivy was discarded, as it was used at funerals: here are a few lines in modern orthography:—

Nay, ivy! nay, it shall not be, I wis;
Let holly have the mastery, as the manner is;
Let holly stand within the hall, fair to behold,
Yet ivy stand without the door—she is full sore and cold.
Nay, Ivy, &c

Holl and his merry men deftly dance and sing,
Ivy and her maidens are always sorrowing.
Nay, Ivy, &c.

The Reformation did not impair the popularity of the Christmas Carol in England. "Suppose," says one writing in 1631, "Christmas now approaching, the evergreen ivy trimming and adorning the portals and particloses of so frequented a building; the *usual Carols* to observe antiquity cheerfully sounding, and that which is the complement of his inferior comforts, his neighbours, whom he tenders as members of his own family, join with him in this consort of mirth and melody." At the end of a miscellany of epigrams, &c., printed about the same period, is a "Christmas Carroll," reciting the pastimes of the season:—

Harke how the wagges abrode doe call
Each other forth to rambling;
Anon, you'll see them in the hall
For nuts and apples scrambling.
The wenches, with their wassell-bowles
About the streets are singing,
The boyes are come to catch the owles,
The wild mare in is bringing.

Other Carols, of a devotional character, were also in use. Warton mentions a licence granted to one Tysdale in 1562 for printing "certaine goodly Carols to be sung to the glory of God;" again, "Christmas Carols authorised by my Lord of London;" and in the Churchwardens' accounts of St. Mary-at-Hill, in the city of London, A.D. 1537, is the following entry:—"To Sr. Mark for Carolls for Christmas, and for 6 square books, iijs. iiijd."

Bishop Andrewes, in a sermon on the Nativity, preached December 25, 1619, celebrates the day as "glorious in all places; as well at home with Carols, as in the church with anthems." For the last two centuries the practice of singing Christmas Carols has been preserved in England, more or less, over different parts of the country. In Heath's "Account

CHRISTMAS JOINTS.

of the Scilly Islands," he says, that it is usual there to sing Carols on Christmas-day at church. Goldsmith, in his "Vicar of Wakefield," writing about 1763, and "laying the scene of his narrative at a small cure in the north of England," relates, that, among other customs which they retained, the inhabitants "kept up the Christmas Carol." Brand, in 1795, states that little troops of boys and girls, at Newcastle-upon-Tyne and other places in the north of England, "go from house to house, knocking at the doors, singing their Christmas Carols, and wishing a happy New Year." A writer, in 1811, in the North Riding of Yorkshire, notes:—"About six o'clock on Christmas-day I was awakened by a sweet singing under my window. Surprised at a visit so early and unexpected, I arose, and, looking out of the window, I beheld six young women and four men welcoming with sweet music the blessed morn." "Carols," wrote our old friend William Hone, in 1829, "begin to be spoken of as not belonging to this century, and few, perhaps, are aware of the number of those now printed." He adds that possibly "upwards of 90 are at this time published annually."

A learned President of the Royal Society (Mr. Davies Gilbert) has published "Ancient Christmas Carols, with the Tunes: he writes, till lately, in the west of England, on Christmas-eve, about seven or eight o'clock in the evening, "cakes were drawn hot from the oven; cider or beer exhilarated the spirits in every house: and the singing of Carols was continued late in the night. On Christmas-day these Carols took the place of psalms in all the churches, especially at afternoon service, the whole congregation joining; and at the end it was usual for the parish-clerk to declare, in a loud voice, his wishes for a merry Christmas and a happy New Year to all the parishioners."

In 1838 William Howitt wrote:—"The Christmas Carols which were sung about from door to door, for a week at least, not twenty years ago, are rarely heard now in the midland counties. More northward, from the hills of Derbyshire, and the bordering ones of Staffordshire, up through Lancashire, Yorkshire, Northumberland, and Durham, you may frequently meet with them. The custom of Christmas Carolling prevails in Ireland to the present time. In Scotland it is unknown. In Wales it is still preserved, perhaps to a greater extent than in England. After the turn of midnight on Christmas-eve, divine service is celebrated, followed by the singing of Carols to the harp; and they are similarly sung in the houses during the continuance of the Christmas holidays."

In the "Penny Cyclopædia" (song Carol), date 1836, the writer states:—"It is still sung during the festive season in many parts of the country, though now seldom heard in the metropolis." Since the above was written, Carol-singing has been cherished by the publication of collections of Carols, original and selected; one of which has been issued by the Society for the Promotion of Christian Knowledge. Dr. Gauntlett has also arranged, composed, and edited "Christmas Carols; or, Lays and Legends of the Nativity;" "including "Where is the Golden Cradle?" "O Wonder of all Wonders," by the Rev. W. J. Blew; a quartet or semi-chorus; "The Legend of Joseph and the Angel," concluding thus:—

Then be ye glad, good people,
This night of all the year,
And light ye up your candles,
His Star is shining near:
And all in earth and heaven
Our Christmas Carol sing,
Goodwill, and peace, and glory,
And all the bells shall ring.

The collection closes with a very old favourite:

God rest you, merry gentlemen,
Let nothing you dismay,
Remember Christ our Saviour
Was born on Christmas-day;
To save poor souls from Satan's fold
Which long had gone astray.

Chorus. O tidings of great comfort!
O tidings of great joy!

Delightful it is to hear the church bells ringing merrily on Christmas-eve, or the Carol echoing through the comparatively vacant street. Such delights have been thus touchingly sung by a living poet —

Wake me, that I the twelvemonth long
May bear the song
About me in the world's throng;
That treasured joys of Christmas-tide
May with mine hour of gloom abide;
The Christmas Carol ring
Deep in my heart, when I would sing;
Each of the twelve good days
Its earnest yield of gracious love and praise,
Ensuring happy months, and hallowing common ways.—Keble.

With a graceful *chanson* of our own day we conclude:—

Be merry all, be merry all,
With holly dress the festive hall;
Prepare the song, the feast, the bell,
To welcome merry Christmas.

And, oh! remember, gentles gay,
For you who bask in fortune's ray
The year is all a holiday,
The poor have only Christmas.

When you, with velvets mantled o'er,
Defy December's tempests' roar,
Oh, spare one garment from your store,
To clothe the poor at Christmas.

From blazing loads of fuel, while
Your homes with in-door summer smile,
Oh, spare one faggot from the pile,
To warm the poor at Christmas.

When you the costly banquet deal
To guests who never famine feel,
Oh, spare one morsel from your meal,
To feed the poor at Christmas.

When gen'rous wine your care controls,
And gives new joy to happiest souls,
Oh, spare one goblet from your bowls,
To cheer the poor at Christmas.

So shall each note of mirth appear
More sweet to Heaven than praise or prayer,
And angels in their carols there
Shall bless the cots at Christmas.
Hon. R. Spencer.

We append as a tailpiece to our Carol ramble a scene of out-door life, such as may often be witnessed immediately before Christmas-day. The weather is thick enough for a "London particular" fog; the folks on the *trottoir* give abundant evidence of a "raw, cold day," from the urchin with his hands deep in his pockets to the passenger of the better class in his chesterfield. To the right of the picture is a pretty piece of street pastime: the hobbledehoy is enjoying the slide, watched by the two boys, who are anxiously awaiting his departure that they may have their turn. In the foreground is a butcher on his fast-trotting cob, carrying out the Christmas joints, suggestive of a warm contrast to the picture, and reminding us of Bloomfield's homely verse:—

The butcher whistled at the door,
And brought a load of meat;
Boys rubb'd their hands, and cried "There 's more,"
Dogs wagg'd their tales to see't.

"Throwing the Hood."—On Old Christmas-day the village of Haxey is enlivened by the anniversary of what is termed "throwing the hood," one of the most ancient customs in England. It is said to have had its origin from one Madame de Mowbray, who, a few years after the Conquest, was riding through Craize Lound, a hamlet of this village; the wind blew her riding-hood from her head; and so great was the amusement to Madame Mowbray, that she left twelve acres of land to the twelve men who were running after it, and gave them the curious name of Boggoners. The land, with the exception of about a quarter of an acre, has for centuries been lost to the Boggoners. The throwing of the hood now consists of the inhabitants of West Woodside and Haxey trying who can get the hood to the nearest public-house in each place. The hood is made of straw, covered with leather, and is about two feet long, and nine inches round. The twelve Boggoners are stationed so as to catch hold of the hood, and they are pitched against the multitude. As soon as a Boggoner touches the hood or catches it—for it is always thrown from one to another as soon as caught—the game ceases. Last year there were not less than 2000 people present from all parts of the neighbourhood, in spite of a dense fog, to witness this custom.—*Lincolnshire Chronicle.*

* The music sold by C. Lonsdale, 26, Old Bond-street.

THE POPPY AND THE FIR.

BY JOHN OXENFORD.

(From the German of Gustav von Putlitz.)

THE POPPY.

We are altogether wrong if we imagine that the flowers can do nothing but bud, and bloom, and smell, and fade, for, although this opinion is very generally entertained, it has merely been forced upon us by our own conceit, which would fain make us believe that everything in nature exists only for our sakes, and that, because we can only perceive the outer life of flowers, they have, forsooth, no inner life at all. However, as I have already said, that is not the case. Not only has every flower a character of its own, so that one is modest, another vain and proud, a third cheerful and brilliant, a fourth dull and sullen, according to their different hues and habits, but every one has also its own wishes, aspirations, joys, loves, and sorrows, while all of them have in common a most exalted patriotism—not a mere attachment to the soil, but such a devotion to the spot on which they have grown, that they cannot exist anywhere else—a sentiment which in modern times has often been wanting among mankind. The flowers have, too, an organ of communication, and to him who understood their language they could tell many a pretty tale, and he could pass many a night (for that is the proper time, as we shall presently see) in listening upon the enamelled field, and all the motley images which passed before him would, probably, appear to him like a beautiful poetical dream.

Now, the narrator of this tale was lying, one balmy moonlight night, on the flowery carpet of the wood, and listening—or, as some will rather believe, dreaming—when all at once he heard a thousand little voices rising from the flowers. Probably some kind fairy, to whom he had unconsciously done some good office, had lent him his hearing for the night. The reed whispered a long dismal lyric poem into the ear of his neighbour, who listened with great attention. The common cornflower, who is a sort of scandalous chronicle among the flowers, chattered away; while at a short distance the red mossflowers were tittering together, and had evidently told something droll. The bell-flower was silent, but she constantly gave assent to what her neighbours said by nodding her head backwards and forwards. With the quaking-grass it was just the reverse, for that kept shaking its head, and could not believe anything it heard. Whether they had perceived the listener, and, according to the old proverb, wished to punish him for his intrusion, or whether the topic was a favourite one with flowers—for some reason or other—their discourse on this occasion chiefly turned on the injustice and unkindness of which man had been guilty towards them.

"Alas!" said a knot of thyme-blossoms, in a mournful tone, "look where the clumsy foot of man has again crushed our dear brothers and sisters."

"Ay, they do not care for us," said a catchfly, who liked to be looked at, and therefore raised herself straight on her slender stem, "however we may caress them and adhere to them. If they would only destroy us for being mischievous, like the hemlock, it would not be so bad; but nothing is harder to bear than their contempt. They do not even think us worth the trouble of keeping their feet from our heads!"

"According to your remark, then," kindly interposed a forget-me-not, "we ought to consider mankind as most unjust toward us. And yet I can answer these reproaches. Are we not their loveliest ornament when they hold their festivities, and do they not always select us as messengers of their holiest feelings—of their love?"

"Those times have long gone by," grumbled the sorrel. "Does not man, in the height of his presumption, dare to meddle with his Creator's handiwork, and endeavour to imitate, nay to surpass, us with wretched things made of painted paper? Which, now, are the fairest ornaments—ourselves or those paltry copies? And as for messengers of love, they only employ us in that capacity when they can get nothing better. Besides, the language of flowers has long gone out of fashion; they call it sentimentality, and laugh at it."

"I could endure all that," interposed the lily; "for how can man appreciate feelings which he does not know? Only, he ought not to deny the existence of those feelings which are brought plainly before his eyes. When night has passed, and we bow around us in the light of morning, we are sure to miss one of our playmates, who has bowed her head in the evening twilight, or has been despoiled by the sharp night breeze. We then mourn over her, and tears tremble in our eyes. Man sees these tears; but, without troubling himself to understand them, he denies that the drops are a sign of our mournful feelings, and says that it is nothing but the dew which the morning mists have scattered over us."

This proof of human injustice must have been very convincing, since for the moment none of them had anything to say by way of addition or reply. A group was then formed around a brilliant poppy which stood close by me in full bloom. For some time I had remarked that all the flowers in her neighbourhood laid their heads together, and took no part in the conversation which had been so little flattering to me. When the pause occurred, the cowslip, shaking her bells, cried out, "Silence, silence, sisters! the poppy has something to tell us." "Silence, silence; a story from the poppy!" was the general cry, and all of them listened attentively. Even the reed-grass had finished its long poem.

The Poppy now raised herself on her slender stalk, looked around her, and then rocked several times backwards and forwards. I expected that she would have let her audience entreat her for a long time, would have feigned hoarseness, and at any rate would have uttered a world of excuses; but things of this sort could not have been in fashion among the flowers, for the Poppy, without any ado, told her story at once.

"You wish to hear me, then," said she. "Well, I must tell you, that, according to ancient traditions, which have been handed down from one generation to another in my family, we poppies owe our existence to a very singular event. Of course you do not believe that, when the world was first created, we flowers were scattered all at once over the earth. No—one came after the other, and things went on then much as they go on in the spring-time now."

"And what goes on in spring?" interposed the cornflower.

"You had better ask that of the daisy," replied the Poppy, "as she is an early flower; and then do not interrupt me any more."

The daisy, who had generally been lightly esteemed—nay, was looked upon as somewhat of a simpleton—while her cousin, the pansy, stood in higher repute, on account of her superior education, was both gratified and confused at being allowed to speak, and her small white leaves became suffused with a delicate red, such as may often have been observed in that little flower. She then raised her head gratefully to her lofty patroness, and proceeded without waiting for further question:—

"How we offended the Winter, and made him so hard with us poor flowers, I cannot say; indeed, opinions are divided on the subject. Only this much is certain, that he cannot bear us, and will not rest till he has swept us all from the surface of the earth. Still his reign does not last for ever, and after him comes our best friend—the Spring. Good Spring looks very grieved, when, of all the motley children, which, on his departure, he so specially confided to the care of Summer, not one is left, and he is forced to wrap his head in a long grey veil, because there are no flowers or leaves to twine into a wreath. He then passes his soft warm hand gently over the earth, and beckons and calls his darlings, not one of whom will yet put out his head, so much they have been frightened by the rough Winter. Nor is this fear altogether groundless, for instances have been known when Winter after his departure has returned and destroyed the flowers. Some flowers, indeed, which have a remarkably kindly heart, do not allow the Spring to wait long, but come out as soon as they can. Such is the case with the good violet; but when she looks round and finds the earth so bare, and so few of her sisters awake, her courage fails her, and she again hides her head under the green leaves. Men call this modesty, but it is much more fear; and then there awakens in the violet a strong desire for her companions, which she expresses by the sweetest fragrance. Poor violet! her desire remains unsatisfied, and when the others come she has already completed the measure of her days. However, as she always feels attracted by her sister flowers, she sometimes returns for a few days in autumn, and obtains her wish, though, for that very reason, she does not smell so sweetly as when she blooms for the first time."

"You now see what happens in spring," resumed the Poppy; "and so it was in the time of the creation—one flower came after another. However, at the time to which my traditions extend, most of them had already assembled, and the earth was truly beautiful, for joy and concord prevailed everywhere. Men and animals dwelt together in peace, and there was nothing but rejoicing from morning till evening. There was only one single being in the wide wide-world which did not share the general joy, and wandered mournfully over the young earth—that being was Night. You will ask why she was so sad. Recollect, she was alone in the world, while everything else had a companion; and is there any happiness in which we cannot impart it? Besides, she became more and more sensible of a fact, which she would willingly have concealed from herself, that she was the only being whom the others would not approach in love. For, although she lighted her own little lamps, she could not help hiding the beauties of the earth from man and brute; and this alienated the affections of all. They did not, indeed, complain to her face; but the rejoicings with which the morning sun was greeted showed plainly enough how little the Night was esteemed. This naturally grieved her, for she was good and kind, and she wrapped her head in her thickest veil to shed her bitter tears. We compassionate flowers were touched by her sorrows; and, although we could not alleviate her pain, we sought to cheer her to the best of our ability. But we had nothing to offer save colours and fragrance, and in colours Night has never taken much pleasure. We therefore stored up for her our sweetest scents; nay, some, for instance the evening violet, gave no smell in the daytime, that they might reserve all their fragrance for the night; and this custom, as you know, they have preserved ever since. Still, all this was insufficient to console the mourner, and she flung herself in her grief before the throne of the Creator.

"'Almighty Father,' she began, 'Thou seest how everything is happy in Thy creation; I alone roam joyless, lonely, and unloved on the earth, and there is no single being to which I can communicate my grief. Day flies before me, though I hasten after him with ardent longing; and in like manner every creature turns away from me. Therefore, Thou, Almighty Father, take pity on my grief, and grant me a companion.'

"Then the Creator heard with pity the prayer of Night, and, fashioning Sleep, gave her to him for a companion. Is it not known that the Creator made Sleep out of kindness; that Sleep alone is beloved, and confers happiness, is the only joy and consolation? Night took her friend into her arms, and henceforth times were changed for her; not only had she ceased to be alone, but the hearts of all yearned towards her, since Sleep, the beloved of all mortals, came with her whenever she chased Day from the earth. Soon other kindly creatures were found in her train—Dreams, the children of Night and Sleep. These passed over the earth, with their parents, and soon formed a friendship with man, who was then a child in heart. But, alas! a change now arose. Passions awoke in man, and his soul became darker and darker. Evil communication soon corrupts children, and thus some of the Dreams, through their intercourse with man, became frivolous, deceitful, and cruel. Sleep observed this change in her children, and wished to banish the erring ones from her train, when the rest came to her and said: 'Let our brothers still be with us, they are not so bad as they seem; and we promise to use our best efforts to repair the mischief they have done!' The father granted the wish of his good children, and thus even the bad Dreams were allowed to remain in his train; but these, as experience shows, have mostly been the associates of bad men.

"As for mankind, they became worse and worse. One beautiful night a man was lying on the fragrant grass, and Sleep and Night approached him, but Sin prevented them from using their power. A frightful thought arose in his soul—the thought of murdering his brother. In vain did Sleep shake down upon him her soothing drops from her magic wand; in vain did the Dreams sport around him, with motley forms; he always shrank back from their gentle influence. Then Sleep called his children around him. 'Let us fly,' said he; 'this man is unworthy of our gifts;' and they fled. When they were at a distance Sleep took his wand, half angered that it had showed its power so ill, and fixed it in the ground, while the Dreams hovered over it, waving about their light, airy images they would so willingly have bestowed upon man. Night, observing this, breathed life into the wand, so that it struck root into the earth. It throve and still preserved the virtue which had invited Sleep; while the gifts of the Dreams became delicate, trembling leaves. This was the origin of us poppies."

The story was ended, and the flowers on all sides bowed their thanks to the narrator. Then morning dawned, and when it was bright day the leaves of a centifolium, which had been scattered by the wind, came fluttering along, and, stopping by every flower which they passed, paid her a sad farewell, and tears trembled in them all.

THE FIR-TREE.

"Why did the Fir-tree break when the daisy said that the Winter was wicked, and could not bear flowers?" asked the linden.

"Because he was angry," replied the oak; "and when he is angry he always creaks. Have you never heard that when the wind comes running through the wood he cries to us flowers, 'Bow your heads!' but that the Fir-tree says, 'Stand firm!' Thus, when the trees of the forest are awed, and pay their respects to the wind, the Fir-tree remains quite upright, and only turns about creaking, because he is in an ill-humour."

"But what has that to do with the Winter and the daisy?" said the linden.

"Ask him yourself," gabbled the poplar, "you will hear what says—he often gives sharp replies."

However, the linden was still curious; and who can blame him? When one stands year after year on the same spot of ground, one does not readily lose a story, from the fear of getting a sharp reply. When it is too sharp, we can shake it off; and so it is with flowers. At the same time the linden was prudent, and considered how he might best open the conversation.

"Fir-tree," said he, "how is it that you always wear the same dress, whether it is winter or summer, warm or cold?"

"Because I am not vain and always seeking for novelties, like you," answered the Fir-tree.

"He has you there," said the poplar.

For all that, the Fir-tree was wrong, and the reason he gave was not the true one. The fact was, that he could do nothing contrary to his nature. However, human beings are quite as bad, and set down what they call their nature as a special virtue. He who has no taste for cress exclaims against it as vain; nay, some make bose poetry because they are insensible to its beauties, and these are even worse than the Fir-tree. The linden had a good mind to be offended by the answer, and abstain from further conversation, but curiosity prevailed; and this was a very good thing, for, in the first place, there is no use in pouting; and, in the next, he would never have known the story of Winter, and we should not have known it either. He therefore grumbled a little to himself, and then, turning to his uncivil neighbour, he said—

"At any rate, you can tell us something about Winter, for you know him, and it is said that you like him. We others know nothing about him, for we are asleep when he comes, while you keep awake, and doubtless have a talk with him during the long, long time."

The Fir-tree kept silent for awhile, and all the trees listened, anxious to know what would come of the conversation, though only the willow spoke.

"You have a stout heart, linden-tree; you stick to him."

At last the Fir-tree replied:—

"Leave me alone, and, if you want to know anything about Winter keep awake. Those who desire knowledge should not sleep their time away."

The conversation would have been now brought to an end had not the oak put in a word. The oak stood very high repute among the trees of the forest, because he was the oldest and strongest, though perhaps he might not have gained respect for the former quality, if he had not owned the latter likewise.

"Fir-tree," said he, "you seem an unciv'l fellow; however, you are not so bad, but always keep the rough side outwards. I know you better than the others, for I saw you when you were scarcely a year old, and had only just begun to sprout forth. But why are you so uncouth with your comrades? Did we not all spring from the same soil? Do not our roots embrace below, as our branches embrace above? Do we not all unite in resisting dangers which we could not resist apart? It is not good to stand aloof, especially for such trifles. Because the others adorn themselves with leaves and you with needles, because your bark is perhaps rougher than that of the beech, must you, forsooth, seclude yourself, and assume an unkindly appearance which does not belong to you? No, no; tell your companions your story. Rejoice with them in good times, just as in bad times you stand by them."

These were serious words, and the Fir-tree took them to heart, as might have been the case with many others. After reflecting a little while, he proceeded thus:—

"You wish to hear about Winter. So be it then! I know you cannot bear him; but, nevertheless, lay aside all your prejudices against him. Do not fancy that I am partial because he is my friend; I am only just because I know him. But to the facts. When the Creator had made the world, and the flowers were springing in the field, and the trees in the forest, He called the Seasons around him, and said: 'Look on my work—how beautiful it is; I give it over to you; share the flowersand trees among you; but love and cherish them.' Then the Seasons were very happy, and sported with the children of Nature. This lasted for a short time, but soon a disagreement began to arise here and there. The bold, fickle Spring could not agree with the slow, cautious Winter. The glowing Summer found the Autumn phlegmatic. Autumn reproached Spring with spoiling the flowers—in short, the contest became more and more violent, and the flowers and trees were the chief sufferers.' At last Autumn said, 'This must not go on any longer; we can never agree while we hold things in common; let us make a division.' The hint was taken, and the Seasons divided the earth between them. Winter built a house for himself at each of the poles; Summer moved about the middle of the earth, and Spring and Autumn established their domain between them. You will hear presently that this division was not strictly preserved, but still it has not been much departed from, and Winter still resides in his old house."

"How do you know that?" asked the linden.

"I was told so by my cousin, who once paid him a visit."

"Observe, he's romancing a little," whispered the poplar to his neighbour.

"How could your cousin visit him?" asked the linden. "Is he not fixed to the ground as we are?"

"It happened thus," replied the Fir-tree. "Some bold adventurous men once came to look for wood, that they might build a ship; and my cousin, a tall slender fir, was standing proudly among the other trees of the forest. They had no sooner espied him than they cut him down, and made a mast of him. They then put out to sea. The mariners hung a huge cloth about my cousin, and said, 'Hold it fast;' and on his head they set a coloured streamer, which could be seen glistening a long way off. My cousin enjoyed himself during the voyage, and did his duty right well; for when the wind came, and tried to take the cloth away, he held it fast, and would not bend in the least. For this reason the sailors esteemed him more than all the wood in the ship. As they approached the north more and more, they suddenly came to the Winter's house. This looked humble, but strong; and the ship kneeled against it, Winter came out, quite surprised at the strange visit. It then struck him, that wherever he had gone he had seldom received a hearty welcome; so, feeling little disposed to hospitality, he shook his head, so as to make the white flakes fly around him. However, when he perceived my cousin, he became civil at once, and they had a pleasant chat; for Winter is always well disposed towards us fir-trees. He wished to know how all his brothers were going on. And, when the mast had told him everything, he began to tell stories too: and wonderful stories they were. What you now hear is one of them.

"There seemed to be no end to the Winter's tales, and the old gentleman was so happy in pouring forth the stores of his memory, that he would not let the ship go, but kept his arms locked round it. My cousin was delighted beyond expression; but the more he was pleased the worse became the condition of the crew. One morning he heard them moaning together. 'Our wood is burned, our stores are consumed,' said the steersman; 'and if the ice does not soon melt we shall miserably perish; let us cut down the mast and burn it; it will last us a long while.'

"When my cousin heard this, he implored Winter to let the ship go, and Winter complied to save his favourite, though he would not have done as much for man. He let the ice melt, and the ship returned home happily with her crew.'

"That was kind, indeed," exclaimed the trees with one voice.

"Let me, however, return to my story," said the Fir-tree. "The earth, as I have said, was divided, and each of the Seasons had a separate domain. Things would, no doubt, have remained in this state, but Spring, with his wonted fickleness, again desired a change. He never could bear to remain in one place! He called the other Seasons together, and made the following proposal: 'Let us make another division,' said he, 'and, as the earth belongs to us all in common, do not let each of us be confined to one portion. Let every one have a fixed period of time, during which he alone shall govern the earth.'

"'Content,' said Summer, 'provided I am allowed to retain the girdle.' 'And I the pole,' added Winter. The thoughtless Spring was perfectly satisfied if he could only attain his end, and Autumn hoped to be compensated in some other way. Thus the bargain was struck, and Spring was about to commence his reign, when the covetous Winter said, 'But lest one should take to himself all the beauty of the earth, let us divide that too.'

"'Good,' said Spring; 'I will take the buds.'

"'The blossoms belong to me,' said Summer.

"'The fruit is mine,' said the covetous Autumn, 'and the leaves of the trees shall belong to Winter.'

"Winter could not object to this arrangement, so the contract was concluded, and Spring began his reign. He kissed the trees and flowers, so as to make them put forth buds, and all greeted him with a smile. When the buds burst, and a thousand colours were sparkling in leaf and flower, Summer occupied the throne of the earth. But now the arrangement was less strictly observed, for Autumn, who always had an eye to his own advantage, made a separate contract with Summer, who was to leave him the flowers in exchange for the fruit. Autumn, they say, had the best of this bargain, and when his time came he gathered in the fruit to which he had a perfect right. However, something else occurred, by which poor Winter was heavily defrauded. You will recollect that by the terms of the agreement Winter was to have the leaves from the trees; nevertheless, in the glowing season of love, when the leaves hung down together, and the flowers coquettishly displayed their thousand bright colours in the grass, something of a flirtation had begun between the same leaves and flowers. As is generally the case, the love-making began with a little teasing. When the sun was about to shine on the flowers with his warm bright rays, the leaves of the trees would interrupt them; and then, before the flowers were aware of it, they would suddenly slip aside, so that the little beauties below were dazzled by the sudden blaze of sunlight. Then the flowers would shut their eyes, while the leaves chuckled on the branches above. Again, when a refreshing shower came, the leaves would hoard up the drops, and when the flowers thought it was all over they would let them fall, so that the flowers were all frightened, and shook their little heads. Presently, what was at first mere teazing became good service, for the sun grew hotter and hotter, and the poor flowers would all have been scorched if the leaves had not, like so many shields, caught the burning rays. After these serious marks of affection, the old plan of childish teasing would not do, and the leaves sought to be united. But how was the union to be effected, when the leaves hung above, and the flowers sparkled in the grass below? Love can always find a way. Even flowers and leaves soon found a messenger by whom their sighs and vows could be carried backward and forward, and this was the ivy. He had sprung from among the flowers below, and now, as a green wreath, wound up the top of the tree, forming, as he kept his leaves close together, a ladder of safe ways, a secret chain of love. Who, on the first glance at the ivy, does not recognise his high mission? who cannot perceive in his evergreen tendrils the suppressed sighs, as it were, of a youthful, dreamy love? With such a messenger the flowers and leaves were perfectly satisfied. However, Autumn's reign drew to its close, and he was about to pluck the last flowers of the field. She leaves grew pale at their earnestly entreated Autumn to let them descend to their dying mistress's below. He granted their prayer, though in this he exceeded his rights, and encroached on those of Winter, to whom the sole government of the leaves belonged. Autumn shook the trees, and the leaves, now liberated, came fluttering down to the ground. Now a life of the maddest love began. Autumn, who was greatly pleased, struck up a wild melody; and the leaves flew in a whirling dance, round the flowers, until these, becoming weak and weary, dropped their heads, when the leaves also, to Autumn's last noisy tune, laid themselves down for their last repose. Then Winter came on, and the fields and woods that were left were bare and lonely. There was no thing great to welcome him except us poor fir-trees, for the flowers would have nothing to do with our sharp needles; and the ivy, who moved himself from tree to tree, as if he would decorate a triumphal arch for the Winter, and from branch to branch, as if he would conceal the inconstancy of the leaves, and give the trees an ornament to compensate for the foliage they had lost. Winter was touched by the sight, and while, in his rage, he struck down the few leaves that, against their will, were still left hanging on the branches, and chased them about over ice and snow, he said solemnly to the leaves of the ivy, 'I will protect you and maintain you in the kindly office you have chosen. Remain as you are, messengers of love, and carry silent greetings from flowers to leaves, from Autumn to Spring, forming a perpetual bridge between the Seasons. Your vocation is to embrace and unite—you are the evergreen memory of fields and forests—you shall hide the severity of Winter.'

"Thus said Winter to the ivy, but on us fir-trees he bestowed his full affection, and prepared for us honours which you other trees do not share."

"And what might those be?" asked the other trees, somewhat piqued.

"Winter is the season for good feeling," continued the Fir-tree, "and he could, therefore, perceive and appreciate that quality in the ivy. This fact is well known to mankind, for at no time do they come together so closely as in Winter. He brings with him the kindly, sacred, and mysterious festival of Christmas; and you see in his train that most friendly of guests, the 'Christmas-man.' You may say that the 'Christma-man,' is love for parents and friends, but that is not true. When he exerts his magic power, mankind find him irresistible. In the beginning of the Winter, the mother is pondering and pondering, but that is only because the Christmas-man keeps whispering into her ear. And whoever goes out to buy anything about Christmas time always comes back with a larger purchase and a shorter purse than he intended. It is not that the pretty things have tempted him, but the Christmas-man, who is ever whispering and persuading, and pulling at the heart, so that the hand opens more and more to improve the Christmas festivity. We Fir-trees know this well, for we are the Christmas-trees, and the good Christmas-man always puts us in the very midst of the rejoicings; and, whether they take place in palace or in cottage, we are sure to be there. However poor the parents may be, they always fix a few candles to our green boughs, for the sake of the merry children. Gold and silver hang from our summits; we bear glittering fruit, and children clap their hands before us; for however beautiful all the rest may be, the Christmas-tree is, nevertheless, the most beautiful of all, having been endowed by, the Christmas-man with his own peculiar magic. Perhaps the children are so fond of the Christmas-tree because it is in itself like the mind of a child, with all those glittering images set in about the green boughs of hope, and the tree stands rich and golden, mysterious and inexplicable. But one glittering image falls off after another, the gold proves tinsel, the hopes wither, the riddle is solved with the last spangle that is taken off, and nothing is left but a faded Fir-tree. In the mind of a child one golden dream fades away after another, one riddle is solved after another, and what is life otherwise than as in the mind of a child?"

But when the spangles have all fallen off, is all your glory over?" asked the aspen-tree.

"When they put the tree on the hearth," replied the Fir, "and he hears many a pretty story which the folks tell when they look into the glowing fire. He listens attentively, but when anything drops out that does not please him, he crackles, so that the sparks fly out, and make the company in the chimney quake again. Even though the golden apples have all gone, the children have a mournful look from their corner when they see the Christmas-tree burning.

"So that is the history of Winter and the Fir-tree. Another time I'll tell a story which a Christmas-tree overheard in the chimney, for very pretty stories are known by man."

THE FOREST BROOK AND THE STONE.

THE FOREST-BROOK.

The Fir-tree had finished its story with the melancholy prospect of a doubtful continuation. His last words had rustled away, and the whole forest was buried in deep repose. One sound alone interrupted this solemn silence, the sound of the brook as it splashed at intervals against stones and roots—the eternal clock of the forest. As it murmured along, now glistening brightly in the sun, now overshadowed by trees and clouds, making the images which it reflected tremble on its surface. Its monotonous sound gradually changed to intelligible discourse, and it began a story unasked, though not unlistened to, by the flowers and trees.

These heard with profound attention. A solemn silence still prevailed in the wood, and the brook still continued its splashing—the only sound that could be heard far and wide. This is the stillness of the forest. Who does not know it—who has not, once in his life, felt it and recognised it as the Sabbath of the plants? All around is so still and solemn. Even the deer breathe more softly and refrain from moving, while the hunter, as if overcome by a pleasing awe, forgets his passion for the chase, and sinks into the grass to partake of the general repose. It is at such times that the brook tells stories to the trees and flowers.

"Do you know whence I come?" said the Brook. "Do you know my origin? The source of the meadow-brook is well known. It appears plainly enough as a little spring, bounding over hill and stone, and then becomes wider and wider, until its scanty dress of grass becomes too narrow, in spite of the soft caresses of its long blades, and at last puts on a stiff bodice of reeds, decorated with light flowery spangles or with black buttons. The source of the mountain-torrent is also well known. High above lies the snow—the mountain's perpetual cap—which the sun colours when he rises and sets, and which the clouds adorn with a marvellous veil; while near it the ice of the glaciers is sparkling with its dark blue colour embedded in the chasm. Without all looks firm and unchangeable; but a cheerful life is busy within—a constant oozing and flowing—so that the water-drops are playing a perpetual game at hide and seek through the chasms and the crevices. The cause of this is the sun-god who is eternally kissing the mountain-heights. The hard icy heart is at last softened by this enduring love, and the little springs are the result of the sun's kisses. These pursue their sport until their place becomes too narrow, and then they find an outlet. When they first burst into daylight they are amazed at the world which is open before them. Other curious springs follow in their track, and now they venture to go further; at first slowly, but afterwards quicker, until at last a lively mountain-torrent is formed, which, like his neighbour the chamois, bounds gaily from rock to rock. Now it throws up its foam like the mountain snow; now it is a clear unbroken mirror, like the ice of the glacier, until it descends into the valley, and finds a delightful resting-place in the fields. But I, the Forest-brook, whence do I come? You cannot find my source—you cannot point to ice or snow as my parents. Only follow my course. Now you think you have found my source behind some stone or mossy hill, but off I bound and laugh at you from behind some forest root. Now a broad mirror, I hide myself among a thousand weeds and flowers; now I bury myself under a heap of stones, which, envious of the forest green, have put caps of moss on their grey heads; and now I come trickling forth again. In fact, my source is the middle of the forest. Hear, then, how I came into being.

"On a bright cloud, which was gently sailing over the fields, sat a delicate little fay, the favourite attendant of the rain queen, arranging the jewels of her mistress. She took out of a casket a long, long string of costly pearls, a present from the sea. Titania had told her to be very careful with them, saying that the tears of the sea were her favourite ornament. Pearls, you must know, are the tears of the sea, which it does not shed, but which it witnesses till the fishermen bring them forth at the peril of their lives. They are, indeed, firm and hard; but, with their pale light, they always resemble eyes which have faded with weeping. The fay was delighted with the pearls, and held up the string to see whether it would shine brighter in the sunlight. However, the pearl is not like the diamond, which borrows its light from without; but the tear of the sea incloses its own soul from which it shines. Behind the fay sat the rogue Puck, who teases both men and fairies; and, while she was surveying the pearls with delight, he unperceivedly cut the string, so that the pearls rolled down, first over the cloud, and then to the earth. The fay was at first overcome with fright, but she soon collected herself, and, flying down from the cloud, pursued the falling pearls. While she was thus floating in the space between the clouds and the earth, she saw the bright beads rolling and sparkling in every direction, and she was about to turn back in despair, when she saw a green field beneath her, and thousands of pearls like those she had lost glistening on the grass and in the flowers. She had already begun to fill her casket, when she perceived that the beads she collected were not pearls, the tears of the sea, but dew-drops, the tears of the flowers, and with sorrowful heart she proceeded anew to seek for her lost treasure. Now she saw pearls like the sea of a mother who stooped over her dying child, and these she collected. Now she saw tears of love, and as she went further she found other weeping eyes, and such abundance of tears that they overflowed the casket. Alas! how many tears are shed upon the earth: a wondrous brook often springs from the eyes of man, and I can tell you the source of this source is the heart, and it will flow forth at the call of pain, sorrow, contrition, and even joy. This brook exerts a wondrous magic, for that heart must be very bad which is not moved by the tears of another. Men often would resist this magic, and say they have no compassion for some tears, because they are well deserved, that here they are wrong, for tears are tears after all, and spring from a heart which has, perhaps, been sorely visited.

"Now, our fay took all these tears for the lost pearls, and, holding the casket firmly under her arm, flew back to the cloud. But, alas! the casket became heavier and heavier (for tears are by no means light), and when the fay opened it all the supposed pearls were dissolved. She flew discontented from cloud to cloud, for they all loved her and shared her grief. Indeed they sent their messenger, the rain, down to the earth to find the lost treasure. The rain streamed and flowed, and weighed down the trees and plants and washed away the dew, but it could not find the pearls. The rogue Puck saw the anguish of the poor fay, and he repented of what he had done, for he had meant only to tease her not to grieve her; so, diving down into the depths of the earth, he brought from his friends, the gnomes and goblins, lumps of glittering spangled ore, which he brought to the fay. "There you have all your gewgaws back again,' said he, 'better and brighter than ever.'

"The Fay was delighted, and the clouds left off raining, but when she examined her present more closely she found it was only glittering rubbish. Stung with rage, she seized the bowl in which it lay, and flung it so far that the glittering fragments formed a wide arch over the whole horizon. This was the first rainbow; and since that time, whenever the clouds weep, Puck fetches his spangles, and the arch is repeated. The rainbow is very beautiful, and is the delight of man as well as of us flowers. Nevertheless, it is deceitful—a fabric of gnomes, and edifice of the rogue Puck. Men know this well enough; for when they hasten after it, it runs before them, so that they cannot reach it, and suddenly vanishes. And what becomes of it? Children say that it falls into the sea, and that water nymphs make their sparkling clothes of it. What was at first the result of chance is now deliberately brought about by Puck. He flies across the sky with his treasures, and, if any part of them is left, he flies back and builds out of it a second bow, rather more or less brilliant. Hence you so often see this phenomenon doubled on the horizon.

"Our fay still sat mournfully on the cloud, and took no pleasure in the first rainbow, which she had herself produced. Titania came up to her, and, as the capricious queen happened now to be in a good humour, she not only forgave her attendant (old for the cause of her grief), but at once forgave her. Perhaps she put up the more readily with her loss because a spirit of the sea, whose heart she had won, had promised her another pearl necklace. Great folk are liberal even with the tears that are entrusted to them. But what was to be done with the heavy contents of the casket which the fay still held under her arm?

"'Hasten down to the most secluded spot in my forest,' said Titania, 'and pour these drops among the most fragrant plants. They shall remain tears as they are, but they shall flow united—one large tear of the forest.'

"The attendant obeyed her queen's command, and thus arose the first forest-brook—thus had the forest also its tears. Do you wish to know whence I spring? My source is like that of human tears—the heart; but it is the concealed heart of the first. When sorrow, pain, or melancholy moves this heart, the tears flow forth. In summer, when so many children of the forest are broken down and destroyed, I flow softly but unceasingly. In autumn, when all is faded, I weep in silent anguish for the blossoms and flowers which the wind often casts upon me, so that my grief becomes their grave. In the gloomy solitude of winter I am congealed, and the tear becomes a pearl like the suppressed grief of the sea. Then do I cleave to the roots and stones with the fair brilliancy of eyes that are faded with weeping. But in the spring, when a sense of indefinite longing is kindled in every heart, the tears of the wood burst forth in mingled emotions of melancholy and joy, and, swelling up, I overflow my borders to greet as far as I can the returning birds of the herbage. Often, too, I am touched by sympathy, and the forest-brook swells when the clouds shed tears of rain, or the flowers tears of dew. Can you not from my whole appearance—from the soft breath of sympathy with which I greet you—feel that my source is the heart of the forest? The melancholy reed presses towards me, and, where I flow, the flower that chiefly springs is the tender forget-me-not, which looks up gently like a faithful blue eye in the hour of parting. The weeping willow in his endless grief drops his branches into my waves. Everywhere I excite sympathy. The very stone which opposes my course—the immoveable stone which time leaves unmoved—brings bright tears when my waters touch him, and my kisses are the only thing which he cannot resist. Among men there is a sorrowful legend about Ahasuerus, the wanderer, who survives every thing, and from whom death even flies. The stone seems to me the Ahasuerus of the forest, and there is much which he could tell you, were his memory good back to the primeval time.

"The rogue Puck is now curious of the Forest-brook, which he tried to supplant with his frippery, but which, nevertheless has risen to a permanent importance, and he often throws a knotted root or pointed stone into my stream, making the drops spring high into the air. Then you will see in the sunshine many colours, like those in the rainbow, playing around me. These are Puck's trinkets, which he throws out in brilliancy, as though he would say, 'Are not my gifts the most beautiful?' However, they soon melt away, while I flow unchanged. Thus the comic is often brought into contact with the melancholy, as if by the very same mischievous spirit. Even the heart of man when nearly breaking with the deepest grief is often convulsed by a comic emotion, and a smile will often pass over the weeping countenance. Amid the deepest harmony of nature we often meet strange distortions. Amid the rich carpet of turf, or the luxuriant crown of foliage, a knotted root or a dry stump often peeps forth; and amid full-blown healthy roses may light upon a shrivelled dwarf, which stands among her sisters like a grimace. All this is the work of Puck, but a penetrating soul knows how nature reconciles all these deformities."

Thus the Forest-brook ended his tale. The stillness yet continue and leaves and flowers rustled but lightly. Suddenly a cracking was heard, and a dry bough, snapped from the top of an oak, fell into the brook, making the drops fly on high and obscuring its brightness. The leaves above were scattered, and the blossoms below were crushed.

This, too, was the work of the rogue Puck.

THE STONE.

The silence did not continue long; it was only the result of the first shock. Indeed, how could it last? When so many stand close together there is always something to gossip about; moreover, the flowers and trees had been amused, and would have liked to hear more.

"If the Stone has really something to tell," said a tall open foxglove, "we request him to communicate it. Nay, he is bound to do something for our entertainment, for he thrusts himself between us, disturbs our intercourse, and never opens his mouth."

"As usual, the foxglove is more curious than any of us," said the strawberry-blossom.

"Curious!" retorted the foxglove. "Why is this charge perpetually brought against me?"

"It is because you're so curious that you lift your head so high, and look so far around you," said the strawberry-blossom.

"Nonsense!" said the foxglove. "I only do that to peep over the stone."

"A fine excuse," muttered the strawberry-blossom.

"And what do you do?" asked the foxglove.

"I bear fruit," was the answer.

"What are you quarrelling for down there?" said the birch. "One is just as vain and just as curious as the other; and that is natural enough, for what can we expect but childishness from things that are never above a year old?"

This imprudent expression nearly provoked a violent war, for all the flowers felt offended, and resolved with one accord that they would not be insulted with impunity. The flag was called upon to act as general to the standing army. The light troops of iron-cape (aconites) equipped themselves, and the heavy artillery of thorn-apples set themselves in motion. The factions of the foxglove and strawberry-blossoms, which had, in fact, produced the whole commotion, resolved to unite against the common enemy; the nettle and thistles were called in as militia to the flowers, and an appeal was made to volunteers. The rose was first ready, and began to sharpen her thorns. We may observe, by the way, that she had an especial grudge against the two, because, although she often shot up to a stately little plant, they would not acknowledge her as an equal. The dispute between them had lasted for many years, and had afforded much work to the diplomatists of the flowers and trees, among whom the acacia had especially distinguished herself, by the zeal with which she espoused the cause of the rose, because she stood in immediate connexion with the smaller sort. Unfortunately the negotiations were all carried on by word of mouth, after the fashion of troops, or we should have had a fine heap of documents relating to the affair, which would have been all the more valuable in a diplomatic point of view, from the fact that the first page would have gone just as far as the last. The other flowers—which had not, like the rose, a private wrong to avenge—had not been idle on this question of honour. The anemone delivered long speeches on the rights of flowers, and the red-grass composed poems. The bilberry, filling her little cask, proclaimed herself *vivandière*; while a large bouy associated to a free corps talked much, and not without animation, about dying for the public good, picturing to themselves in the most glaring colours the part which they would all play in the great triumphal procession.

Matters were really growing critical, and, if the trees did not arm themselves at once, many of them, from motives of inconvenience, disliked the contest. The fir-tree was particularly annoyed, because, as he had just been talking about the tender relation which existed between the trees and the flowers, he seemed open to a charge of romancing. However, the greater part of the flowers soon lost their warlike zeal; they liked listening to the Stone better than fighting, and by general desire the whitethorn and the blackberry came forward and negotiated terms of peace. The latter was very zealous in the cause, as she considered herself somewhat as a relation to the strawberry, who had been the indirect cause of discord, while the whitethorn, who stood between the tree and the flower, was certainly an excellent diplomatist in a contest of the sort. An arrangement was, however, so easy, as the birch could not refuse to entirely wholly to retract his offensive words. At last a loophole was found in an admission made by the birch, that, although he could not retract his declaration that the trees were older than the flowers, he was ready to admit that the stones were older than the trees; moreover, he assured the flowers that this concession was by no means intended to offend them, inasmuch as he had always held them in great respect. The foxglove murmured, and the sirewd pine thought to herself that the birch had said nothing at all; but the flowers generally professed themselves satisfied, and the difference was terminated by mutual expressions of friendship and courtesy.

The discourse of the birch had again directed attention towards the Stone, and the desire to make him speak became very great; for, after the noise of war and the stormy excitement which had just passed, every one longed to hear a fanciful tale. But how was the taciturn, uncommunicative Stone to be approached? The trees took to give the Brook the office of persuading the Stone, the Brook having boasted of his intimacy and called attention to his stores of knowledge. The flowers, on the other hand, thought that the grass might be best employed, as being closely allied to the moss. This difference of opinion perilled the peace just concluded, when the Brook itself proposed another method.

"Request the fern to negotiate with the Stone. He is neither flower nor tree; he is the Stone's fan, and, moreover, his confidant, who bends over him, caresses him, and flatters him. Be sure the Stone will refuse him nothing."

"Fern," said the flowers, "will you persuade the Stone?"

The fern nodded solemnly and silently. All listened, and the Brook murmured as though he also were persuading; though, whether he did so, no one really knows. The trees shook themselves once more, as a preparation for silence, and the flowers all thrust their little heads from the grass. In the meanwhile the fern had whispered to the Stone the general desire of the forest; and the following narrative strangely rolled forth through the broad leaves and through the moss which covered the narrator:—

"The Brook is quite right when he says that I am the oldest in all the forest, and know of times which lie far beyond the reach of your memories. The stories which I have heard from you are for the most part true, though here and there a little correction is required. What the Poppy told you, viz. that one flower came after another on the earth, is true; the statement of the Fir-tree, that the seasons divided the earth between them, is true likewise; but, before this, a long long time elapsed, and many a battle had to be fought before things arrived at this point. When the Creator had first made the world the earth was a great rock, hard and barren, but firm and immovable. As the rock was so cold, the three elements, a mighty family, were sent to warm it and to fertilise it. First came the eldest brother, fire, clad in his dress of gold and purple. Violently and recklessly he raged through the earth, but the rock was hard and unmanageable. Fiercely as fire might glow upon it, it would not yield to its violence.

"A wild contest arose. In some places fire overcame the firmness of the rock and shivered off fragments of all sizes, which he scattered around in the pride of victory. This was the origin of us Stones large and small. We lie scattered about the earth without plan or order, just as the unbridled element in his capricious mood cast us off. The result of the contest was not in favour of fire, for, while he fumed away his strength, the rock was acquiring force and skill to oppose him. He was at last forced to succumb; and the rock, taking him prisoner, loaded him with mighty chains, and confined him in its own core, where he remains still. That every stone contains fire you all know; for, when we are struck together, or when man, who loves fire, and has made him his servant, strikes one of us with steel, a spark leaps out. These sparks are all little particles of a mighty force, and I will afterwards tell you how fire is always furiously toiling and moiling in the core of the earth. When fire was thus vanquished, his younger brother, water, came clad in green and silver. He was more shrewd and experienced, and had, moreover, an easier task to perform, for he could not only make use of his brother's partial victories but had gathered knowledge by his fate. As he saw that so little had been done by open combat, he betook himself to entirety and negotiation. He played about the rock, now caressing, now fighting, as he employed by turns entirety, cunning, and violence.

"The earth soon began to change her appearance, for, as water had taken possession of all the places which his brother had conquered, he at once secured a firm footing. Thus he extended more and more, in the wide basin which now contains the sea. The rock good-humouredly allowed these encroachments, but cunning water rose higher and higher, and at last violently burst forth in those places which are now valleys and in which water has embedded its rivers. The rock even put up with this, and merely set up the banks as boundaries, but water became more and more encroaching, and often went far over the banks to attack the rock. The latter, however, knew that he had right and strength on his side, and drove the water back. Water, being obliged to recede, devised a stratagem which prevented him from losing all his conquests. All the light fragments which he had coaxed out of his hard opponent he concealed in his depths, and, when he had overflowed his banks and was driven back, he left behind some of this mixture of rock and water, and the rock allowed it, because the fragments were after all a part of itself. Thus rose the distinctions of sea, river, rock, and earth. Still all was barren, for what is gained by force bears no blessing. Then the fair sister of the elements, the air, was sent in her soft blue garment to reconcile and vivify the rest, and began to make peace between the rock and its adversaries. The rock would not indeed set fire at liberty, but air received permission to visit her imprisoned brother as often as she pleased, and whenever she did this she took a portion of his warmth, and scattered it over the whole earth. There were now signs of animation; the germs of plants began to strike root in the soil. This was not the result of heat alone, for the soil could not produce without the softening and cooling influence of water. As, however, a firm boundary was set to the goodwill and activity of water, air caught from him his warm fraternal kisses, and, bearing them as greetings, scattered them about the soil. All became verdant, trees and blossoms sprouted forth, and man and beast could live upon the surface of the earth. Thus does air visit her brothers alternately, and each makes her a present—fire giving his heat, water giving his soft clouds. Hence you see air sometimes imbued with the glowing which she has caught from the embrace of fire; sometimes in the misty garment which water has hung about her as a parting gift. You see the fire of evening, the glow of morning—you see the mists rise when air bids adieu to water—you see clouds float along. The clouds, as children of the water, do not like to be far above the earth. Air makes her servants, the winds, bear them on high; but they cast a longing look downwards, and, overcome by a desire for home, return to the earth dissolved in tears. The particles of fire which have been carried up by air do not choose to remain with her, but dart down to the earth, not gently, like the clouds, but wildly and tumultuously. This is the origin of that wonder, the storm, which affects every inhabitant of earth. The soft desire of the clouds is communicated together with the fierce glare of the lightning, and a sharp sense of terror, coupled with a deep longing for some distant home, takes possession of man and beast, tree and blossom. But the blessing of air attends the storm, and, when fire and water return to earth, all become strong and thriving.

"What further ensued—the arrangement made by the seasons—you I have already heard. We Stones, who see everything blooming and verdant around us, and are old enough to recollect the early times of strife and disorder, rejoice at the sight, although we lie unheeded upon the soil which once beionged to us alone. Thus the foxglove made a very foolish speech, when she said that we thrust ourselves among you; since, on the contrary, it is you that crowd around us, and will scarcely allow us the little spot of ground on which we have quietly and modestly taken our place."

The foxglove, blushed and overcome by confusion, hung down all her bells, while the strawberry-blossom tittered under her three green leaves, and the birch began to rustle overhead. The Brook, fearing that the old strife would be renewed, said, "We are much obliged to you for your story, grey elder of the forest, but you owe us still more."

"What do you want to know?" asked the Stone.

"We want to know what fire is about in the middle of the rock, and whether he is contented in his captivity."

"Not quite," replied the Stone, "for though his sister's visits amuse him, and he has the pleasure of contributing, with her assistance, to the fertilisation of the soil, he harbours a secret desire for liberty, and perhaps for absolute dominion over the earth. Water and air, however, well knowing that the reign of fire would cause general destruction, are careful in preventing him from becoming too violent. Wherever he appears air hastens to the spot, and kisses her beloved brother; and although her kiss renders him stronger and brighter, she causes the warmth to be distributed, so that it becomes powerful. If she should not prove sufficient to curb him, water comes to her aid, and, after a contest which is often noisy enough, fire is once more compelled to be quiet. He then sits deep in the bosom of the earth, devising all sorts of tricks by way of pastime. First he contrived to melt down part of the rock, and, while it was in a state of fusion, intermixed it with the hues of his own bright purple garment. This was the origin of gold. Then he borrowed a light colour from the water which pressed towards him through the chinks of the rock, and painted silver. He even managed to melt off part of the reddish-black garment of his jailer, the rock, and with it he painted iron. As great a blessing attends these things, as you may well imagine. Gold and silver are mere delusions, however men in their folly may toil after them; and iron, which has generally been produced at a time when the rock was not kindly disposed to the soil around it, is still used to break it up and rummage its contents. It is a surly discontented metal, because the rock was in an ill-humour when it bestowed its colour. However, as fire had the chief share in its production, the injury it does to the soil is not so very great; nay, on the contrary, it is a great cause of fertilising the earth. For all that, we Stones do not like to see the good earth so hacked about; and when the iron is driving along, we throw ourselves in its way, intercept its blows, and do it no little damage.

"When gold, silver, and iron were finished, fire became tired of always painting in the same colours, and commissioned air, when she returned, to bring him others from the earth. She accordingly gathered the grass and flowers, and took them down to him. She could not, indeed, bring much, but, nevertheless, fire, using the green of the grass and the soft enamel which he took from the flowers, painted a great variety of stone, which he penetrated with his warmth. Thus the interior of the earth, which probably you imagine to be very black and horrible, looks gorgeous and glittering, for the precious stones, which are the flowers of the abyss, the eyes of the rock, glitter from the walls. In fire's workshop a drop of liquid colour sometimes falls, or fire washes out the brush with which he has painted the gold, silver, and precious stones. This is the origin of the gaudy veins and stone which glitter without value—which allure and deceive. These it is to which the Brook referred when he told you how Puck built the rainbow.

"We never observed that air carried off any of our brothers or sisters," said the tulip, shaking her head incredulously.

"That is because you do not pay attention," said the Stone. "Only observe the red light of evening, then you will find colours painted in the air, which you do not see otherwise. There are the red of the rose, the yellow of the crocus, the blue of the violet, the green of the grass, and the scarlet of the poppy—in short, colours too numerous to mention. It is not every evening, but only now and then, that you see this strange combination, which is, in fact, a nosegay in the hand of air, who is carrying it to fire. All that you perceive is the general appearance of the colours, for your sisters are too far to admit of your seeing them distinctly; but, if you question your own hearts, they will reveal the truth. You all feel powerfully attracted, and turn your heads towards the glittering nosegay, for your sisters' love exercises a charm upon you, though you are not aware of it."

"But what did fire do with the nosegay after he had sucked out the colour?" asked the forget-me-not. "He preserves it; and though it is colourless it is glittering and unperishable in the bosom of the rock, where the leaves of the flowers are kept and become bright crystals."

The Stone was silent, and the oak said: "Pardon me if what I am about to ask you should seem offensive, though indeed it would be impossible to offend one as wise as you are. According to your own words, I am, after yourself, the oldest in the forest, so I have a right to your confidence. The other earthly beings have a purpose, undergo a change; we grow, blossom, and bear fruit, each after its kind; but you Stones remain unchanged, always the same, and always on the same spot. Now is not this existence dull and tedious?"

"You are just like the human race," said the Stone, half vexed, half smiling. "You think that you and your doings are amazingly important—in fact, are the grand object and focus of the whole creation. You grow, blossom, and bear fruit; but what is gained by all this? You fade away and are forgotten. Time passes his hand over the spot where you stood, and all trace of you is obliterated. Every individual, whatever he may be, is a mere drop in the ocean of nature, unheeded by any but himself. Who, indeed, can tell for what purpose he exists. As for me, I am never dull, though I have remained so long immovable for I have a receptive mind, and there is a constant change around me. Many thousand years have rolled over me, but no day is like another. Sometimes I amuse myself by listening to stories of distant regions. I then lay my ear against the ground, and low through the rocks flows the secret discourse of stones, telling of spots on the earth which are wondrously beautiful, and which stand as isolated tales amid the great tale which nature is ever constructing with the earth.

"Yes," said the Fir-tree in confirmation; "there are noble spots on the earth, as I have been told by my cousin, who, as you know, went a great way when he was a mast."

"Ay," observed the ash ironically, "spots where there is nothing but ice and snow, and where your friend winter keeps perpetual possession of the earth."

"With your usual carelessness, you have not been sufficiently attentive," calmly replied the Fir-tree. "Do you not know from my narrative, that there are also spots which 'belong exclusively to summer, and which winter never touches'—spots where trees are always green, and where flowers always adorn the carpet of the fields—where water never congeals to ice, and where the snow only touches the earth like a cool kiss from the clouds?"

"Ah!" cried several flowers at once, "we should like to see such a place."

"I *shall*," said the Brook, somewhat proudly; and he splashed along more swiftly with the delight of travelling. "I shall join the river, and the river will join the sea, and then I shall be carried to those fair lands."

"In the meantime I will tell you something about them," said the Stone, "for I have just received intelligence of a most lovely spot. At the time when water made peace with rock he rested in a charming bay, while the crowns of the rock looked down upon him in a circle. This was the sea's favourite spot, and it called for air to endow the margin of the shore with a powerful charm. 'Dip your foot in my wave and I will cool it,' said the sea to the rock. 'I will crown your head with flowers,' said air, 'and the earth will lay a carpet about your knee.' 'And as you are so beautiful,' interposed the water, 'I will hold a mirror before you, that you may see your beauty, and your image shall ornament my waves.' And so it came to pass.

"The shore wound as a green and blooming curve about the sea, and the rocks looked down upon it smilingly. Now, once upon a time, when air visited fire, she told him of the fair retreat where water passed his happiest hours. 'Could I not see it too,' said fire? 'I will try to talk the rock over,' said air. The rock happened to be in a remarkably good humour, and was easily to be persuaded in this bay, where water and air had shown him such civilities. Thus a compact was soon made. On the one hand, the rock opened a window on the top of a mountain where fire was imprisoned, so that he might peep out whenever he pleased. On the other hand, water allowed a little rock to rise above his surface and look around it. Just opposite to the bay, where the curve of the shore widens to admit the sea, lies this rock, cool and comfortable amid the waters. By day, when light has so brightly upon the earth, only smoke is seen issuing like a cloud from the rocky window which faces the sea-and; but at night, when the earth is wrapped in darkness, fire thrusts out his flaming head, and his glowing eyes shine fiercely forth. Then he looks pleased enough, and plays all sorts of tricks, often practising a joke upon my friend the little rock (who, by-the-by, told me this story), who would give him tit-for-tat if it were not so firmly fixed in the sea. It is only since the window in fire's dungeon has been opened that the bay has become perfectly beautiful. Fire did not like to look on so much beauty without contributing himself, and he therefore flung his rays far upon the shore; these falling on the green trees adhered to the branches, and were not extinguished, but were converted to fruits, red as when they were first issued from the mountain, and still filled with the glow which they brought. Still, as the rock tells me, these sparks, changed to fiery oranges, are still glowing on the trees. Indeed, these fiery fruits are perpetually glowing, decorating the branches from year to year's end, while the leaves of the tree are always shining with their fine dark brightness.

"But has this wondrous fruit no blossom?" asked the apple-tree.

"Certainly it has," replied the Stone, "a blossom—a beautiful, fragrant snow-white blossom, the same upon the fruit and blossom, and the scent of the latter is blended with the fire of the former. In that part of the shore which is most abundantly blessed with this fruit, the rocks advance close to the sea, and wear on their heads an orange grove interwoven with the light branches of the vine. The flames peep down from the mountain, delighted to complete the gift they have bestowed. The sea rolls wondrous songs to the beach, and fringes his garment with white foam. The rocks proudly bound the scene, while the air gently sports over the waters, impregnated with the sweet scent of the orange-blossom, and penetrated with the spirit of the sea, which tempts the fragrant plants of earth to bathe in its waters. Every evening, when air paints the horizon with red, she clothes the lofty rock with light rosy garments, so that it looks down like a blushing bride of the sea. Every night fire decorates his mountain with glittering ribbons, which hang down, exhibiting fiery jewels, embroidered on a gold ground. Thus the flames of fire, and the waves of water, sport with one another. The red light buries itself in the floods, and then peeps out broken by the trembling of the water. All this is seen by my friend the rock, who is himself crowned with vines, and who is adorned with a green cap which the turf has woven about his head, with a nosegay of orange-flowers, and a waving palm by way of a feather, while the pointed aloe and prickly cactus nestle close against his forehead. He sees this, and out of love for his brothers fire and water, and his sister air to whom he is indebted for so much pleasure, he has made them a snug place for familiar intercourse. At the extreme edge of the rock, close to the watery mirror, opens a small, almost imperceptible, door, behind which is a cool lofty cavern. Here water, fire, and air assemble mingled, but yet divided. Here the glassy water is flowing and undulating, but the deep blue of air, such as it appears in the clearest sky, has penetrated it, and the shining light of fire flames through from below with wondrous brilliancy. Then, although flames seem rising from the surface, their glow is softened by the hue of air, and their light undulates like the waves of water. Air occupies the spacious arch of the cavern, but she glitters like water, and flows around like the floods below, while the flames of fire are darting against the rocky roof. Thus do the elements converse privately together, though they sometimes allow man to overhear them. The favoured person, building a boat, enters the wondrous place where he can float upon the blue air, bathe in the shining fire, and breathe in the moving waters. However, when the conversation is of a very secret nature, they allow no listeners. On such occasions the sea bars up the entrance with a grove of waves, while air uses her winds as bolts. The strange things that then occur are known only to the elements themselves and to my friend the rock, who encloses them, and who, having given his word to reveal nothing, keeps his promise."

"He is very good of him," said the rose, "and I like him for it. He is fond of flowers?"

"An eternal spring of roses blooms around him," said the Stone.

"That must be very beautiful," sighed the centifolium.

"And I shall see it all," exclaimed the Brook, delighted.

"Then take our greetings to the roses on the rock," cried the flowers.

"And ours to the oranges by the sea," rustled the trees.

"How shall I know the place?" asked the Brook.

"By my description," replied the Stone. "Men call it the Bay of Naples, and my friend the rock in the sea is, in their language, called *Capri*."

"I shall find it, doubtless," said the Brook, splashing along. But the Brook had a great way to go, and for a long time he wandered about in the immensity of the sea before he saw the wonders of which the Stone had spoken.

The recorder of these tales was standing at Sorrento, in the *loggia* of a small villa on the sea-side, which he alone inhabited. The vines which shaded it were still thinly attired, and freely admitted the light of the sun; but the orange-blossoms were fragrant, and the fruit with a friendly smile peeped at him through the dark leaves. Vesuvius was talkative, and the sea indulged in its strange discourse. All at once one wave broke against the rock with a kindly sound: it bore from its distant home the greeting of the flowers and trees.

The Brook has performed his office—he has brought the greeting to the flowers and trees of the bay; but to the teller of these tales he has brought no news of the loved one at home.

GATHERING MISTLETOE.—DRAWN BY FOSTER.

MY MISTLETOE MEMORIES;

BEING THE OLD BACHELOR'S RECOLLECTIONS OF THE LADIES HE HAS KISSED UNDER THAT PLANT—THOUGH NOTHING EVER CAME OF IT.

WITH AN ILLUSTRATION BY FOSTER.

I DON'T know how it is. There never was a man had a greater capacity for getting married. I am notoriously a chimney-corner character. I hate living in chambers. I envy all my married friends, and regularly fall in love with their wives—with the full privity and consent of the husbands, of course. I'll be bound to say there never was a poor fellow threw himself more in the way of the thing. I am well enough off to keep a wife in a pleasant, gentleman-and-ladylike style. I am not worse-looking than nine fellows out of ten. I am decidedly good-tempered. I am not ridiculously awkward, or spoony, or bearish. And yet, confound it all, I can't get married.

Nobody can say I haven't tried. I've tried in town, hard, these ten seasons. I've tried in country-houses; and they say every man has his chance there. I've done my Florence and Rome. I've yachted in the Solent, and all about there, and subscribed regularly to the Ryde balls. I've even gone the length of rigging myself out in a ridiculous green coat, and hat and feather, as one of the suburban toxophilites (though I never even hit the target), because there were a lot of girls in the club, and one was thrown a good deal together with them through the summer, in pic-nics, and that very provocative sort of thing. But all to no purpose. I can't do it. And yet how near it I have been, to be sure! So any one will say, I think, after reading these mistletoe memories, in which I mean to unburthen myself of some of my failures, which fell out at Christmas times, when people are particularly free and easy and sociable; and when, what with morning-room lounges, and rides, and private theatricals, and charades, and extempore Christmas gambols, there are no end of chances, as one may say.

I've had my share of these chances, I can assure you, and I think I did my best to profit by them (as I imagine my subsequent confessions prove), yet it all came to nothing. There was Fanny Hughes, now. Here's a bit of the mistletoe under which I kissed her, with the date upon it, 184—. Bless me, is it so long ago? Why then she must be some four and thirty now; and I—but I'd rather not calculate. It was at the Hugheses jolly old red-brick Berkshire house that I spent that Christmas, and a jolly party (as fitted the house) we were—the old folks fresh enough in heart to sympathise with us young ones (I say this advisedly, for I hadn't a grey hair in my whiskers *then*), and we young folks all determined on making a merry Christmas of it; and Fanny was the merriest of the lot. Dear Fanny Hughes (I beg the Rev. Mrs. Ingulphus Crabbe's pardon for remembering her by her secular name) was in complexion a blonde; in character the most *piquant* mixture of a blue and a romp that ever crazed a man. She rode like a Penthesilea, and when she rattled her light mare alongside of your steady hunter over the springy old park turf (not broken up for a century), with her bunches of golden ringlets flying back from under the brim of her black wide-awake—for she had adopted that becoming head-gear even at that early date—and her clear face glowing with the rapid motion, and her round bust heaving with the heave of the gallop, and her light laugh ringing through the air till the cows half a mile off looked up from grazing, and wondered if fairies were in the wind—I defy the soberest, flattest, most ditchwater-blooded of men not to have knocked under. And she was just as irresistible out of her riding-habit, for she sang charmingly, and every now and then flung into her pathetic songs such a comical twang, and dashed her mirthful songs with such an under-music of sadness, and then she talked so wittily, and had read such a great deal, and in so many tongues, and was so wayward and reckless in her judgment of books, and men, and things, that even if a man did not go out riding with her, and thus escape the Diana of the park, he was sure to find himself at her chair all the evening, and so fall a victim to the Minerva of the drawingroom. Now, I was both riding man and reading man, and so I was hit on both sides, and I confess I thought Fanny saw it, and had no particular objection. But she was such a romp that it was hard to say. I don't imagine she had a bit of conscious coquetry in her nature, but she couldn't resist the harum-scarum blood that made her light heart dance to all sorts of tunes.

The only real spoon of that party (if I may be allowed the expression) was the Rev. Ingulphus Crabbe, a sucking Puseyite divine—an "acolyte" he delighted to call himself—who had just taken orders, after coming out a mild fourth-class at Oxford. Oh, what a bore he was! He was oppressively humble, and wore his hair parted in the middle, with a long black outer garment (which looked like a surtout arrested half way in its growth towards a great coat), a waistcoat buttoned to the throat, and surmounted by a tight white stock with no visible tie to it, and close-shaven whiskers; presenting altogether a mortified, self-satisfied, and most conceitedly abject appearance.

No wonder Fanny laughed at him, and no wonder he was scandalized at her. I used to draw caricatures of him in ridiculous positions, which amused Fanny exceedingly. In fact, as a Cambridge man, I felt it my duty to put Oxford down in the person of the Rev. Ingulphus; and I thought I had succeeded. He used to bring Keble's "Lyra Infantium" into the drawingroom, and Prudentius, and other barbarous ecclesiastical poets, and laboriously translate them to Fanny, and ask her to set them to music, which she did, always choosing the most vulgar airs, such as "Jim Crow" and other early Negro melodies then popular, which, being played slowly, quite satisfied the Rev. Ingulphus, who thought them charmingly devotional. He fasted twice a week; never rode, nor skated, nor played hockey with us on the lawn; in short (though he rather imposed on some of the girls in the house), we men all voted him a prig and a spoon, and none seemed to take a more decided view of him in that light than my charming Fanny.

Well, Christmas came, and we had the mummers in from the village, and the yule-log in the great hall fireplace, and a dance afterwards under the mistletoe—under that very mistletoe of which a dried-up sprig is now lying on my table. I had been riding with Fanny in the morning, and I thought I had done everything but pop the question. I danced with her the first country dance, and I kissed her under this very mistletoe, and I determined to settle the matter that night, come what would.

Towards the close of the ball—for we kept it up very late that night—I looked in vain for Fanny. Nobody had seen her for the last dance or two. The Rev. Ingulphus was missing too; but as he had strongly denounced the affair altogether, and especially the mistletoe part of the entertainment, which he pronounced a heathenish and Druidic superstition, nobody was surprised at his absence, which was, indeed, rather a relief than otherwise. Where could Fanny be? I felt it would never do to go to bed without settling matters one way or the other. So I went to look for her. The drawingroom communicated with the hall by a billiard-room, and out of the billiard-room was a little morning-room, which Fanny called hers, but which was common property, for there was always sure to be some fun going on there.

She wasn't in the billiard-room, and she wasn't in either of the drawingrooms, and her maid was still dancing, so I knew she hadn't gone to bed. As I passed through the billiard-room, on my way to the hall again, big with my great resolve, and the arteries in my temples throbbing like Jullien's big drums, I saw a light in the morning-room for the door stood ajar, and heard voices, I listened; indeed, I had only to stop to hear. It was the voice of the Rev. Ingulphus. The tone was as passionate and tender as he could pitch it. In fact, he was in the very heart of a declaration. "Oh! by Jove," I thought to myself, "how I shall make Fanny laugh with this to-morrow. But let me see the lady," and, stealing to the door, I peeped in. They were sitting on a sofa together, very near each other, before the fire. Her back was towards the door, but there were the golden ringlets, and the head was resting on the black shoulder of the Rev. Ingulphus.

* * * * * *

That day four months Fanny Hughes was transformed into the Rev. Mrs. Ingulphus.

I have seen her since, accidentally; she is a good deal changed, and I see she will be a coarse woman. She is passionately devout; it is probable that Ingulphus and she will both go over to Rome. On second thoughts, though, I don't know that they will, for he has a good family living from the Hugheses; and as he has an almshouse in the parish with six old men and twelve old women, who don't object to any amount of morning service ("matins," as he calls it), and will go through an incredible quantity of genuflection and other ecclesiological posture-making on consideration of the very liberal doles which Mrs. Ingulphus is accustomed to serve out at the vicarage to those of the right sort, I shouldn't wonder if he stays where he is, as the bulk of the congregation have "suited themselves," some of them in the parish church of the next village, and some in the dissenting chapels (of which three have sprung up in the parish of the Rev. Ingulphus); and the bishop is an easy-going sort of a man.

And that was what my first mistletoe memory came to.

I didn't bear Fanny any malice, but I don't think I danced much the next year, and I certainly didn't feel disposed to make another trial of a romp. One has no security, I felt, with your fly-away style of woman; though how the Rev. Ingulphus contrived to do it I haven't the slightest notion to this day.

The Christmas after that I spent in Devonshire, not far from Teignmouth, in the grandest scenery of England, at the house of my old uncle Sparshot, a hard-a-weather half-pay admiral, who had married a Devonshire beauty with a good fortune.

Jack Sparshot, my cousin, was a great crony of mine; we were at college together, and I had skulled with him, town and gown rowed with him, been confined to gates with him, tumbled his bed when he slept out of college, and, in short, done all the offices of a Cambridge Orestes to his Pylades. Jack was a good-natured, harum-scarum, black-whiskered, apple-cheeked fellow, with a great deal of the old admiral's sailor-like frankness and kindliness, but with no more sentiment in him than an old special pleader. He was a capital shot, a good rider to hounds, and one of the most knowing cattle-breeders in Devonshire. In short, he was the *beau-ideal of a* country gentleman, according to western notions, thinking no more than he could help about anything not immediately growing out of the ground of his own county and his own estate. Among our Christmas party that year

was the widow of an old shipmate of the admiral, Mrs. Topsham, who was staying at Torquay for the benefit, she said, of her daughter Emily's health. Emily was with her mother. She was a tall, pale, slight girl, with soft brown hair, and great tender grey eyes, that looked on every human being, from the knifeboy up to my uncle, with the same imploring, appealing expression.

By the way, why is it one always describes a woman by her hair and eyes? One always does somehow as if, these given, everybody could fill up the rest of the picture.

Emily was in delicate health, always had been, her mother said, and she looked frail enough certainly. But I must say that I never could see any trace of the wear and tear of pain in her smooth white brow; and I can answer for it that her appetite was capital. However, she was *censée* an invalid, and she was such a pretty and interesting invalid, that one couldn't help wishing she might never get quite well; though, at the same time, it was absolutely necessary she should never get any worse.

She used to lie a great deal on the sofa, in the prettiest white cashmere peignoirs, with lots of shawls and burnouses about her, draped in the most picturesque way, and two or three times a week she would not appear at dinner, and on these occasions, when we came into the drawingroom, we were sure to find her in the prettiest sort of headdresses, half veil, half night-cap, all lace and muslin and delicate ribbons, in which she looked a something between odalisque and invalid, that was very bewitching indeed. And then, when you asked after her health, there was such an angelic tone of resignation in her voice, and such a depth of unrevealed suffering in her smile, such a piteous appeal in her great lamp-like grey eyes, with their black lashes, that you felt inclined to clasp her in your arms then and there, and vow to cherish, watch over, and wait upon her to the end of your natural life.

She didn't go out much. Indeed, her chest was so delicate, her mother said, that it was even dangerous for her to change from one room to another without precautions; and, accordingly, when she did migrate, as she occasionally did, to be a spectatress of our Christmas gambols, from the drawingroom to the library, she came hooded and shawled, like an Eastern Sultana, leaning with such a delicious pressure on the arm of the happy fellow who had succeeded in winning that place of honour, and sank always into the warmest and softest seat, which, somehow, every body (herself included) seemed to consider hers by right. And then the gentle look of thanks with which she rewarded her cavalier! She gave me two of those looks, and I was done for.

I can't express the tenderness I felt for this suffering angel. How I longed to take her up in my arms, like a delicate lamb, and carry her gently through the rough places of the world! Jack Sparshot, on the contrary, was *brusque* and boisterous with her, as with everybody else. Her sufferings seemed to make no impression on his coarse and unsentimental nature. He shocked us all dreadfully once, I remember, by suggesting that a good canter would do her more good than all the nursing in the world, and actually made the groom put a side-saddle on a young thoroughbred of his own, and brought it round for her, after putting it through its paces on the terrace, to show her how gentle it was—a performance in the course of which he knocked a whole row of stone garden-pots into the ha-ha.

When Christmas came, dear suffering Emily did her best to join in our sports. Dancing was out of the question; but her couch was brought down into the hall, and she lay wrapped in her shadowy draperies and looked on, like a Princess, while we danced before her. When I say "We," I didn't dance much; I spent the best part of the night leaning over her sofa, drinking in the "light of her eyes," listening to her soft flute-like voice, and thinking that, if angels ever were invalids, they must, while in that state, be uncommonly like Emily Topsham.

There seemed a sort of sacrilege in making love to a creature who appeared always on the point of winging her way to a better and a brighter world. I had never breathed a word of love to Emily, but, if ever a man showed himself over head and ears, by every look of his eyes, every vibration of his voice, and every act of his intercourse with a woman, I was that man. She must have seen it; but she was so sweet, and gentle, and tenderly trustful with everybody, that confound me if I could ever quite satisfy myself that she made any difference with any of the half-dozen young fellows who were in the same predicament with myself.

Of course the women hated her. Mary Sparshot, who had a good deal of Jack's coarseness, said, in her slang way, that she was a humbug, that her delicacy was a "do," and called her constitutional tendency to consumption "the interesting dodge."

But this was not to be wondered at, for Emily had all the men at her feet; and we were never happy unless when we were trotting about on her errands, or doing slavish offices to her, such as making up her pillows, another holding her eau de Cologne, a third fanning her, a fourth re-arranging the shawls over her feet, and so on, all but Jack Sparshot, who didn't scruple to say to Em ly's face much the same style of thing as his sister said behind her back.

Among other pieces of brutality that Christmas-night, he insisted on Emily's joining in the last cotillion, and absolutely succeeded in dragging the poor girl up from the sofa for the purpose. And when it came to the mystic ceremony under the mistletoe—(heigho! there's the sprig, labelled with her name and the date)—I was happy enough to have her hand to mine, and, for the first and the last time, I pressed a kiss upon her lips! That brute Jack Sparshot did the same just after me, with a smack like the explosion of a soda water bottle. She blushed and appeared disgusted at Jack's; she blushed, but did not appear disgusted at mine. Oh, what a night I had after that kiss! I mean mine, not Jack's. It was plain that it was no new sensation. People talk about the wretchedness of marrying an invalid wife, of turning one's house into a hospital, and so forth. I fet those who talked so were selfish brutes, and had never known an Emily Topsham.

I determined, come what might, to break it to her the next morning, and to offer my heart and hand, and fortune, such as it was, to promote her happiness. If she wanted a husband to defend her, I was ready. If she required a nurse to wait upon her, I was willing to take the duty. I would live at watering-places on the south coast. I had no objection to go abroad—as far as Madeira. In short, I was ready to be husband, lover, servant, sick-nurse, slave, and family physician, all in one.

When I saw her the next day, Jack Sparshot was leaning over the sofa, coarsely joking with her about his performance on the night before under the mistletoe, and obviously wounding the poor girl's feelings. And there he stuck the whole morning, though the hounds met in the neighbourhood, and there was no frost. I couldn't get an opportunity of throwing myself and all I had at her feet.

Unluckily a frost set in the day after, and there was no hunting for a week. Jack Sparshot was always hulking about Emily's sofa, and I never could get the dear girl to myself for a quarter of an hour a t that blank week, unless when the room was full of people. At last the frost gave, and it was with indescribable satisfaction that I saw Jack in pink at breakfast. I made an excuse for staying at home; and, as soon as breakfast was over and everybody scattered, I flew to dear Emily. She lay in a little room, half conservatory, half parlour, which had been christened her *boudoir*, and I thought I had never seen her looking more irresistible than she did among the green wine arum and the camellias, whose glossy leaves and bright cornelian blossoms brought out her ethereal style of beauty with tenfold effect. It was one of her "sick" days, too, and she wore one of those bewitching caps which made her lovelier ten times lovelier.

I wasn't master of myself. I did then what I never did before, and what I believe is seldom done by people who make declarations—off the stage: I actually went on my knees, and I poured out my devotion in that slavish attitude.

She cast down her lustrous eyes and let me finish, and then in her sweet voice she told me how honoured she felt by my preference, and so forth, but that her hand and heart were promised to another!

And whom do you think they were promised to?

Jack Sparshot! black whiskered, apple-cheeked, fox-hunting, cattle-breeding, loud-voiced, blustering, hulking Jack Sparshot! Yes; *he* had done it when I couldn't. And his success puzzled me just as much as the Rev. Ingulphus's. They were married in due course. Emily is still lovely, and still an invalid. But Jack Sparshot, I am thankful to say, is no longer jolly, and red-cheeked, and boisterous. He is grown a tamed, spiritless, sneaking sort of a fellow, something between a groom of the chambers and an apothecary, and spends his life in paying guinea fees to celebrated doctors, and trotting his interesting wife about from watering-place to watering-place; though Emily, I will do her the justice to say, always chooses the prettiest ones; and the best of the joke is, that she leads him a deuce of a life, by all accounts, and has always a set of sympathisers round her, who consider him as a brute, and her as a victim, and don't scruple to tell him so indirectly; and she encourages them in it, though nobody knows better than she does who is the victim in that establishment.

So I was well rid of my interesting invalid after all. She was, in fact, a very finished performer of precisely the same line of character, though on a higher stage, as the gentleman with a white nightcap on, who cranks "I am starving" on the flags, and takes sudden fits in the presence of well-known good Samaritans, unless there happens to be a policeman in sight.

However, I didn't know all this till a good many years after Emily became Mrs. Sparshot, and I won't pretend to say that I didn't feel an aching void for many a month after that morning in Emily's boudoir.

And now, have you still a mind for a third mistletoe memory? I believe I am an awful warning, in some way or other, though I don't exactly know what; so I don't mind going on in the hope that what I write may be useful to "persons about to marry."

Did you ever spend a winter at Boulogne? If you haven't you've no notion how dreary that seaport is, when it's too cold for bathing, and too windy for walking on the jetty, when, as a rule, there's nobody staying in the place but those who've made every other place too hot to hold them, and when there is nobody in the steamers whom one may have the fear of seeing on land, and when everybody who does land bears traces of recent seasickness, and when the ball-room at that establishment, down on the sands, is shut up, and you sometimes can't get any fish for a week together; and when, if it's a gale, you see the poor fishermen's wives and sisters in an agony of fear, saying their prayers to *notre Dame de Bon Secours*, and, in short, when everything is as much the reverse of jolly as it is possible to conceive. Well, I spent the winter of 184— (you cannot expect me to give the final figure, I am sure) at Boulogne, not because I couldn't leave it, but on account of the severe illness of a travelling companion with whom I had made a tour in Switzerland and Italy, and who knocked up on our road home.

I was determined, like Mark Tapley, to be jolly under the severe difficulties of the situation, as the French say; so I went everywhere, made acquaintance with everybody—that is, everybody that was not tabooed by the police and the English Protestant clergymen (two very safe detectors), and made excursions to Portel, and picked up a sort of acquaintance with the fishermen, and made a little quiet old bachelorish love to the pretty *matelottes*, in an innocent way; and, in short, extracted the utmost enjoyment I could from every thing about me.

There was a knot of presentable English there still, as I have said, and it was devised amongst us, as Christmas drew on, that we should assemble at the largest and pleasantest house of the set, for a regular John Bull Christmas dinner, and a Christmas-night's fun after it.

I may as well own at once, that I had, as usual, found an attraction, in the shape of a woman, even in this wintry waste of Boulogne. This was a Mrs. Wyndham Effingham, who had been married in India, and was now at Boulogne for the education of her two children, a boy and a girl. She wasn't more than five-and-twenty, and must have been left a widow about four years, as she had been that time in England, she told me. Mrs. Wyndham Effingham!—the name was suggested instantly—I met her unstantly at the English Protestant clergyman's, the very citadel of Boulogne respectability; and, besides, the two children were guarantees in their way.

Now, Fanny Hughes had cured me of romps, and Emily Topsham of interesting invalids, but I found in Mrs. Wyndham Effingham a woman who just fitted that miserable niche in my heart, never vacant for a time, ever vacant for a permanence. Maria (for she reappears to me under that name) was a pretty, black-eyed, agreeable, energetic, sensible brunette, clearly a woman who had had her difficulties in life, and had pulled through them by dint of a pleasant face, good heart, and a great deal of common sense. It struck me as odd that she never alluded to her husband. I concluded it was one of the common cases of an Indian marriage consignment, and that she had no particularly tender remin.scences of her purchaser.

I made her acquaintance through her boy, a sturdy youngster of some seven years old, whom I one day found in the fish-market defying to the combat four French boys, each bigger than himself, because they had called him a "*jeune goddam.*" The abominable *matelottes*, instead of taking the poor little hero's part, were egging on their cowardly young compatriots to go in and win, which they seemed in no way inclined to do, the fourfold combat having a mysterious dread of even the tiniest pair of English fists. Still, it would have fared ill, I fear, with little Willy Effingham if I hadn't come to the rescue, and cuffed the young rascals who were insulting him. Fearing that the French boys might follow and waylay him, I walked home with him to his mamma's (who had a very handsome apartment in the Rue de l'Ecu), and consigned him to Mrs. Effingham, whom I had met before, as I have said, and had, indeed, been introduced to at the English clergyman's.

I was struck by her homely and daily bread grace and good sense, and I must confess I saw her afterwards as often as I could decently contrive a pretext for doing so. And Boulogne is a town like Brighton, where one may always make sure of meeting all one's acquaintances in the place so often that it becomes a bore at last to pass them, as one never knows whether to go by with a bow, or a smile, or a word on the weather, or without taking any notice whatever.

Mrs. Wyndham Effingham and I accordingly became fast friends. She consulted me a good deal about her children's education, which, I must say, appeared to me to consist chiefly in a continued course of bad French and haricot beans; and I used to ask her advice about my friend's ailment, which was one of a kind (she said), "My husband used to be much subject to in India." "Died of it, probably," I thought to myself; but of course I felt a delicacy of intruding on the subject. I never heard anything of the late Mr. Effingham but in allusion to his complaint. No doubt he had been a horrid, cruel, wicked old Anglo-Indian, with a cotton saure and nankeen trousers. I couldn't help drawing a momentary comparison between my idea of the late Effingham and myself, and I felt comfortable.

Mrs. Effingham was of our Christmas party—the life and soul of it, indeed; and I believe we were all incomprehensibly John Bullish on the occasion. I remember we sang "God save the Queen" with a fervour of loyalty of which we had never conceived ourselves capable before; and "Rule Britannia" was chorused in a style of blustering defiance that was really unpardonable, considering we were in France. We were all a good deal affected after dinner, and there was an undefinable sort of God-blessing and shaking hands, among slight acquaintances, which I never could quite account for in a rational way.

Our Christmas dance was a great success. We invited some of our French friends to it, and the interest they took in the ceremonial, the frantic way in which they assisted at making the fog, and their ecstatic delight at the *ponche flambeyante* with the snap dragons, and the desperate efforts they made to drink "wass hail" and "trink hael" in the Saxon manner, are things not to be described. Neither can I adequately convey an idea of the dance performed by one of our French visitors, a furious *Anglomane*, who had once, unluckily for himself, been to Scotland, and had seen a few specimens of what he called les *Montagnards*, and who on this occasion gave us a French version of the Highland fling, with variations—due, I may charitably suppose, to the punch. I believe, if a *serpent de ville* had been there, he would have spent the night in the nearest *violon*, for as the French call their station-houses.

But the triumph of the evening with both French and English was certainly the mistletoe. I never saw the ocular privileges of that plant more violently drawn upon than that night in the old town of Boulogne. The way those Frenchmen entered into the spirit of this part of the entertainment with "*les jeunes mess*," as they persisted in calling every lady in the room under forty, was perfectly startling. I am glad to say, however, that I succeeded in preserving my pretty widow's cherries intact—I mean for my own private use. I was the only man who kissed Mrs. Wyndham Effingham's lips under that mistletoe. I believe I was the first that offered to do so, and she seemed rather taken aback.

Before I left the house that night I had determined to turn this preference to account; and, after carefully weighing the *pros* and *cons*—under which latter head Master and Miss Effingham cut a large figure—I determined to avow my passion next morning, and ask the widow's hand. Next day was pleasant and sunshiny. I met her on the jetty, her roses not a bit faded by the late hours of the night before.

The Dover steamer was just smoking in between the piers, as in a few hurried words I told her the state of my affections, my family, and fortune (for I felt she was a woman of business), and offered myself and my advantages, personal and contingent, to her acceptance. She blushed—that I expected; and then she laughed—which I did not expect; and then she was apparently about to make an apology for laughing—for I suppose I looked annoyed—when suddenly fixing her eyes on the scanty and sea-sick passengers who were clambering up the ladder on to the jetty, near which we stood, she gave a short scream, ducked under the *demane* ropes like a diver, and before I had time to close my mouth, which had opened involuntarily in my amazement, she was hysterically hugging a lathy gentleman, with a yellow face and a large cloak, who seemed rather embarrassed at this passionate recognition, at which the grinning *douaniers* and gaping *matelottes* "assisted" (as the French say) with much apparent satisfaction.

Obeying a sort of mechanical impulse, I had followed her to the ropes; and judge of my feelings when, releasing the tall gentleman, she turned, and introduced to me—Mr. Wyndham Effingham, her husband!

She wasn't a widow, after all—only a grass-widow, as the Irish call it—one of those very little married Indian wives who come home with the children, after a few years' marriage, leaving her husband to feather his nest and ruin his constitution in Burhampore, or Hyderabad, or Badgery-wollah, as the case may be.

It was too bad. She ought to have mentioned him sooner; but she told me afterwards she hadn't the slightest idea—didn't know she had a live husband, and, moreover, had no conception I felt anything for her warmer than friendship. Now, what the deuce is it in me that will not allow women to see when I'm in love with them? They never do, somehow, and now, I suppose, they never will; and that's the reason why I still continue to subscribe myself

"THE OLD BACHELOR."

MISS HENNY.

BY CALDER CAMPBELL.

In the old, very clean, not very large, but very dull "borrowstoun," in the north of Scotland, where almost the whole of that educational system which was intended to fit me for the common arithmetical and grammatical requirements of life was carried on, there was one small street, wider than the others perhaps, which certainly contained houses of a more antique build, amongst which not a shop was to be found, who e fame rested upon the number of ancient unmarried females of a respectable rank in society that resided in it. We wicked urchins of the Grammar School called it Old Maid-street; and, if there was a locality in all N————, that abounded with more modest worth, more genuine charity, more practical usefulness than any other, it was that very street. I affirm this at the outset of my sketch, lest by any chance, our readers, you should turn from it as containing nothing but a commonplace diatribe against a class of women which I reverence, and in which I have found individuals possessing every feminine endowment that can grace the mind. I have discovered amongst "old maids" such qualifications of intellect—and, where the brightest lights of intellect were wanting, of heart-goodness—as justify almost any amount of praise I may be inclined to lavish on them.

There were actually eleven spinsters in that street, not one of whom was reproached by such condemnatory epithets as are by some considered to be the fitting attributes of the race. People said that, if a twelfth intruded into the charmed circle, the harmony that was known to prevail amongst them would evaporate. Not unlikely, since a straw may light a conflagration; and the first permitted plant of ragwort may fill the farmer's field with many weeds; but luckily, in my youthful days, the original number remained unaltered. There was not one of these women who could lay claim to the very uninteresting title of "faultless monster;" there was not one who had not a natural freckle on her temper, a human wrinkle on her disposition; there were even one or two—perhaps more—who had fewer beauties than defects in their mental construction; but where will you find the perfectly spotless drift of snow? As soon as it has reached the earth, there will something belonging to that earth mingle with it, either springing from its couch, downfalling from its canopy, or windwafted to it by atmospheric influences.

Amongst them, however, was one who became at a very early stage of my existence an object of peculiar interest to me. Not wholly unmercenary was my predilection for Miss Henny, for she was the dear and consistent friend of my own favourite cousin Jeanie—herself an old maid now, and one who has won love and regard from all who knew her by a steady course of usefulness, piety, and benevolence. Besides which, Miss Henny had many ways of winning the affection of a boy whose natural inclinations tended strongly towards the creature comforts of buns, marmalade, and *floury scones* covered with honey. Above all, she had a roomful of books, which she not only loved to read herself, but which she loved to lend to others to read, provided great care was taken of them. Now, I was as fond of reading all sorts of old fashioned books as I was of feasting on short-bread; and to her I owe my first impressions of nature derived from St. Pierre, my first worship of ideal harmony gleaned from Spenser; my first serious, but not gloomy, views of religion from Flavel's quaint and gentle pages. I should not forget, that among those books were a few of a description that acted upon my mind with a sort of fascination not altogether wholesome. There were some old black letter romances: Mrs. Radcliffe's "Udolpho," Charlotte Smith's "Solitary Wanderer," Mrs. Roche's "Children of the Abbey" and "Evelina," then actually a new book, at least in our part of the world.

Miss Henny Rose at this time might have been some fifty years of age. In figure she was large, robust, muscular; I used to think she would have made a capital drill-sergeant, she stood so erect, and insisted so strenuously upon every one else doing the same. Her face had no beauty derivable from contour of features; the latter, indeed, were masculine; and a *soupçon* of moustache, which seemed but a shadow of her thick, blackeyebrows, began to invade the upper lip of a mouth somewhat large in itself, but garnished with very white and even teeth and a smile that was very sweet and not unfrequent. Her eyes were black and large; their expression at times was that of intense thoughtfulness; it seemed as if she were looking at something beyond that outward object upon which they were fixed; and, as she sat abstracted in this position, I have watched her from the window-seat, where I used to read of an evening until my thoughts of what hers might be have startled me. A serious smile was often in those eyes, but it was evident that tears had been no unfamiliar things, though a serene tranquillity was their now general expression. Yet, when aroused by indignation at what she deemed unworthy conduct, I have seen them light up with a fire that betrayed the existence of feelings suppressed but not extinguished. She was without any living relations, having been the only child of a poor but proud Highland gentleman, on whose death she became heiress to some property which brought her in about £100 annually. And truly she

was considered rich by many of her sisterhood in the neighbourhood, though to heard her wealth in bank or coffer was not her forte. She was quietly and judiciously charitable, and the real delight she took in doing good taught her a financial economy not natural to her free and liberal character. Miss Henny's chief self-indulgence was to assemble a party of young folks to what we used to call "a grand tea." A few elderly persons were always there, but the feast was avowedly prepared for her juvenile guests, and it is wonderful how mirthful she became in administering to the mirth of others, and with what ease she prevented gaiety from degenerating into boisterous romping. And what tea she gave us! Never since have I drunk such tea, not even in that Eastern land where, fresh and fragrant from China, the aroma it exhales, as the catty containing it is opened, perfumes the saloon. Yes, once I drank of "the cup that cheers, but not inebriates," and acknowledged it equal to that of Miss Henny's brewing. It was prepared by Mrs. Leigh Hunt, and sent down to us by her to her husband's studge as "tea, just as she used to make it for Keats!"

Then the accessories to Miss Henny's tea were choice and delicate; the wholesome brown bread sliced and covered with the best, richest, primrose-hued butter of Strathspey, flour scones, hot and well-buttered oaten bannocks, crisp, and sweet with marmalade or honey! Merry games followed our innocent feasts; sometimes, too, a little dance, for an ancient spinnet stood in the room, and there was always some one who could play a reel, or, may be, a country dance. Sometimes one of the girls would sing old ballads, such as "Barbara Allen," or the "Heir of Lynn;" and sometimes, in the long winter evenings, we would gather round the fire, and listen to such stories as fairly made our young hearts leap within us. We had tales of witch and of warlock, of water-kelpie that sang sweetly on the brown waters of the Nairn till the traveller drew near, when, with discordant shrieks, the fiendish creature "melted away 'neath the water, cooking its tail up just like a big skate." We had traditions of haunted cairns, and of Highland raids of fairies heard on the hill side by the shepherd, who, putting his ear to the roots of the bracken, hears the sound of their voices; and of tasks that tell of the common avocations of life—the pouring of water from pail to pan, the kneading of bannocks, and the whirring of spinning-wheels. There were love stories too; but more about ghosts, and of the *Bodach nan Cluoteo*, or Old Man in the Mantle, that is known to appear on the grey rocks of Ardclach, and on the moors of Brasmoray, though Miss Henny insisted that it was nothing but a monstrous bird. In those modern days poor Miss Henny would have been sorely condemned for encouraging the legendary lore which followed her cakes and cream. But we took no harm that ever I could discover; and, if I continue to cling to a little belief in the supernatural to this day, I can conscientiously assert that it has at no time caused me the slightest discomfort.

"If I had minded that this was the 1st of August, I should not have invited you here to-night," said Miss Henny, at the breaking up of one of her parties, as she helped my cousin Jeanie on with her cloak; "yet ken what happened to me long ago, my dear? Ay, ay; well, I should be thankful that I have forgotten it myself. But God is good! He makes us to remember, and he makes us to forget even as He thinks it is best for us! It was a sore grief to me, many a day, but the guilt of blood, or of the desire to shed it, was never upon my soul. God bless you, bairns, and dinna think o' what I have been saying to Miss Jeanie." The latter part of this speech was addressed to a few young people, who like myself had heard with some wonder the whole of what had been said; nor had we passed her threshold before we began to descant on it, as we followed our senior up the long lane that led past the kirk.

"I should like to know what melancholy occurrence Miss Rose alluded to, as being connected with this day," said I to my companion, a very pretty girl whom I generally contrived to escort home on similar occasions.

"I think I do know," replied Mary Ann; "but boys should never be told such things, they always make fun of them."

"Make fun of what?" cried I; "besides, I am not such a boy, after all. I am to get a cadetship next year, and perhaps when I wear a red jacket——"

"Red jacket, pooh!" said she, rather disdainfully I thought "it would have been better if Miss Henny had never seen one. Why, it was an officer that she—but I had better hold my tongue."

"Good gracious, Mary Ann! you are quite mysterious to-night. You surely don't mean to say that she murdered a soldier?"

"Well, admitted Mary Ann, "there might be that she somehow killed an officer—he was a real captain; but by all accounts he quite deserved his fate."

I had no time to investigate the claims of the real captain to be slain by lady hands, for we reached our adjoining abodes, and parted for the night. From it not long after I gathered from my cousin Jeanie the revelations of Miss Rose's history—a simple story, out true, which I shall relate in my own way.

Rose of Rosebarn, in Ross-shire, the father of my heroine, had run through a considerable property, in the manner then, as now, peculiar to *fast* men. He had married a woman as extravagantly inclined as himself; and when she died, leaving Henrietta to the care of her husband's sister, it was fortunate for the poor motherless girl that she fell into such excellent hands as those of Mrs. Cameron, who, herself a woman of strong understanding, sincere piety, and practical sense, brought up her niece to be a useful and amiable member of society; so that on her decease, which happened when Henrietta was in her twenty-fifth year, she had the satisfaction of knowing that she had done her duty by the girl, and that the annuity she had settled upon her was safe, judiciously placed beyond the reach of her reckless brother. Mrs Cameron had resided for many years at Rosebarn, where the influence she exercised over the laird was not without these beneficial results which, more or less, conduct and temper are sure to command. But on her death the frivolous and dissipated habits of the man again broke forth, unrestrained by any feelings of regard for his daughter, who had some difficulty in prevailing upon a maiden relative to come and reside with her, whose presence might in some measure protect her from the society of the troop of lawless and ill-mannered guests whom her father encouraged to spend night and day at the hall. About a year after the decease of her aunt, a certain Lieutenant Murdoch was introduced to her by her father, as an officer on furlough from his regiment, then in the Peninsula. Mr. Murdoch was a handsome man, some forty years of age; and how it came to pass nobody knew, but so it was that he became violently smitten with Miss Henny, who, though by no means beautiful, possessed comeliness, good nature, and good sense. In after days, Miss Henny was wont to declare that her heart never fully responded to a warmth of affection, which was yet flattering, if not appreciated; but circumstances threw them together; and, believing that he was the most respectable and best behaved of her father's associates, she at last consented to become his wife in the course of two years, provided nothing occurred in the meantime to alter her favourable opinion. Murdoch professed himself satisfied, as he owned that, for a year or two, his means would not enable him to marry.

His stay at Ross-shire lasted six months after they had come to this understanding; but, long before he went away, circumstances had occurred to strengthen Henrietta's conviction that she had acted prudently in postponing the certain promise of her hand. Reports reached her of the former life of dissipation led by Murdoch, and she was dissuaded from ever fulfilling her engagement by insinuations that insanity prevailed in his family. To these whispers Henrietta turned a deaf ear, but she could not conceal from herself that of late the lieutenant had become the inseparable companion of her father in all his wildest escapades. They spent weeks together at Inverness, whence they were sure to return with empty purses and tarnished reputations. They played hills as for cards incessantly, and drank whiskey punch until each night ended in noisy intoxication; and at length they took to fox-hunting in their cars, till one afternoon, after a mad scamper over heath and hill, Mr. Rose was brought home senseless from a fall, from the effects of which he never recovered.

Leaving a penitential letter, replete with such promises as none are so ready to make as men who contemplate no reform, Murdoch left Rose-urn for Inverness, whence he speedily departed to join his regiment. Henrietta read the plethora of protestations with a cold heart and a contemptuous lip; she felt that she had never loved the man, and cared not to think of him. Her father died within a few weeks after the accident, and, but for the generous precautions of Mrs. Cameron, Henrietta would have been almost a beggar. Her father died insolvent, Rosebarn was hers no longer, and before the year was over, fresh disclosures and discoveries were made of the utter profligacy of the absent lieutenant, which induced her to despatch a letter to him, putting a complete end to all matrimonial speculations between them. In the course of time she heard that his situation in Inverness had received intelligence of his promotion, but that he had been compelled to sell out. Habits of inebriety had become so frequent that he was advised to quit the army, as the only means of escape from impending expulsion by court-martial: a severe wound in the head, received in action and whilst gallantly encouraging his advancing men, entitled him to some degree of favour, and he was allowed to sell his commission. He came home—a total wreck! and his relatives ascribed his dissolute habits, which they termed eccentricity, to insanity; but the truth of the matter was, that he was a confirmed drunkard. There is a line of pseudo-benevolent philosophers, who rank all vices as proofs of insanity: it is a false and dangerous theory, for insanity is a disease of the *intellectual* nature; whereas vice, having no taint of the insane, is wholly evidence of *moral* disorder.

Henrietta Rose had retired with her aged relative to a neat little cottage near Dingwall, and a most unwelcome visitor there was Captain Murdoch! He denied having received her letter, and urged his suit with indelicate obstinacy that would listen to no word of denial or rebuke. Resolutely and civilly Henrietta acquainted him with her full cognizance of his misconduct, and declaring that she neither loved nor esteemed him, requested him to withdraw. The scene that ensued was terrible. Murdoch retired a few hours, but returned in such a state of frantic intoxication that Miss Rose was obliged to summon the assistance of some men who were working in the fields near her cottage, and it was only by force that he was ejected from her disturbed dwelling. In the greatest alarm of repeated intrusion she accepted the invitation of a worthy minister, whose manse, situated in a wild hilly country, was some miles from Dingwall, and here she and her cousin owed the enjoyment of several tranquil weeks to the hospitality of her host and his wife.

But the time was close at hand when tranquillity was to be dispelled. One fine forenoon in early August, Miss Henry, who had been walking with the minister through his corn-fields—beginning to yellow in the late harvest of Ross-shire—left him at a little bothy in the glen, where a sick parishioner claimed his kind offices, whilst she pursued her way up a steep rocky path that led to a mountain cairn, said to be the last resting-place of a celebrated warrior who fought his death in the wilds time. Henny had not hitherto visited this spot, where Mr. Matheson promised to join her, and she had reached it, and sat herself down to rest her limbs wearied with the ascent, whilst she admiringly surveyed the extent of wild and romantic country visible from her exalted position. The cairn was nothing but a huge accumulation of grey stones, singularly enough placed on a jutting corner of the rock, which in this place was completely bare of vegetation, though beneath it verdure flourished rankly at a great depth, nurtured by the irrigation of a brown hill stream which no summer's heat had power to drink up. Opposite the cairn, across the narrow glen or ravine, there was a long stretch of steep cleft-land—not so high, indeed, as the promontory on which Henrietta rested herself, but shaggy with tufted shrubs and hazel trees laden with ripening nuts Along the sides of these brass ran a little track that led as well as the steeper path by which she had ascended to the cairn, extending laterally behind it and diverging thence into several branches. As Henny sat there, she was aware of a movement among the hazels on the opposite ridge, and presently saw a figure emerge from the coppice, into which, however, it again disappeared. She thought no more of it, concluding it to be some peasant looking for early nuts, and had, indeed, reverted to meditations that were seldom idle or selfish, when a loud laugh behind her, and the next moment a rude grasp and pressure of rude hands on her shoulders, frightened her into the utterance of a shrill cry, reiterated when she found herself held by Murdoch, his eyes inflamed by drink or delirium, his dress in ragged disorder, and his hands and face distorted by filth and neglect.

After the first intensity of her terror had in some degree subsided, finding that her struggles to release herself were in vain, she endeavoured to soothe him by gentle entreaties; but he continued to laugh the idiotic laugh of drunkenness, as he insisted on carrying her down the cliff in his arms.

"You are now my bride," said he; "you break no more promises with me, for if you do not let me carry you now to the minister down there to be married, I swear to you that I'll jump with you in my arms down from the cairn to the glen!"

And as he spoke, he lifted her in his arms, till she shuddered lest he should indeed keep his threat to put his threat into execution.

At that moment a shot was hred at no great distance, and Murdoch's grasp relaxed for a moment. In the next, Henrietta had extricated herself at the expense of her dress, a portion of which remained in his hand. Staggering wildly from him, she sprang across the ledge of the cliff on which rested the outward part of the cairn, and found herself in a position so perilous that her brain whirled as she gazed around her. In advance of her, at a very few paces distance, the path ended abruptly in a mass of slaty perpendicular cliff, which she could neither ascend nor pass; below her descended the bare sneet of rock, at least sixty feet; the cairn divided her from her assailant, and already he was near at hand, for, as she stood panting on the narrow space which lay between her and destruction, he appeared at the top of the cairn, and in another moment was again beside her.

As he laughed loudly, pointing to the opposite ridge of hazel, Henrietta's eyes fell upon the form of Mr. Matheson, and she uttered a cry for help. He was proceeding slowly to join her by the track across the glen which conducted to the cairn through the hazel copses. He heard her cry, and saw her situation; but the circuitous nature of the path would prevent him from reaching her in less than ten minutes, and in ten minutes what might not happen? As this thought flashed, whilst a fearful struggle commenced on that dangerous mountain-side. Henrietta was robust and muscular, and, in repelling Murdoch's attempt to seize her round the waist, clutched his right wrist with a force so convulsive, that, his feet at the same time coming against a block of rugged slate he slipped and fell on his knees, dragging her down with him, until he had almost reached his maiden relative. As they wrestled, panting, both silent, two other individuals appeared on the spot so recently occupied by the minister, and the spectacle they beheld seemed to rivet them in terror to the ground they stood on. They beheld what Murdoch himself had no cognizance of; they saw that he knelt on the very brink of the precipice, to which his back was turned, and down which glared the terrified eyes of Henrietta, in full consciousness of their impending doom. At that instant one of these spectators, impelled by some impulse, and in opposition to the desire of his comrade, raised his fowling-piece, and, levelling at the cairn directly above where Murdoch and his victim crouched, discharged it with a loud report, which then, as before, had the effect of loosening Murdoch's grasp. Suddenly withdrawing her hold of his wrist, she pushed him from her with her whole force, and felt back herself, senseless, on the rock. Fortunate insensibility! for it saved her from the fate which awaited Murdoch, whose left arm, shaken from her by the weight with which she came to the ground, was no longer linked with her body. He started on his feet, the better to regain his hold of her, but, heedless of the chasm behind him, stepped back, and—*fell!*

When they came to look for him they found but his body—a shattered and formless mass!

Henrietta was conveyed, in a deep swoon, by Mr. Matheson and the two gentlemen, who happened to be neighbours, to the manse, where for many days a violent brain fever threatened her life. But she recovered, as we know, although for months, nay years, she was afflicted with a deep melancholy, which yielded at length to time and the pious reasonings of kind and judicious friends. She became at last convinced that she was no murderess; and, learning the true uses of affliction, that it is sinful to forget our duties to others in our indulgence of selfish sorrows, she became gradually the cheerful, charitable, busy, and helpful Christian we all loved so well.

Dear Miss Henny was eighty-four years of age when a short illness carried her off; but she retained her senses to the last, submissively enduring the pains of a severe agony, and resting with a cheerful faith on the consolations of a creed which fortifies us in weakness and soothes us in sorrow.

NATIONAL CHARACTERISTICS.

Shakspeare, with that intuitive perception which in him was so remarkable, sometimes hits off a characteristic difference in a single word. Not seldom, he illustrates, in this manner, the entire distinction between two nations. Thus, in regard to the French and English character, the *Dauphin*, in "Henry VI.," is made by him to demand of *Sir William Lucy*—

> On what *submissive* message art thou sent?

Whereto the latter, in the true spirit of his country, replies—

> *Submission*, Dauphin! 'tis a mere *French* word;
> We English warriors wot not what it means.

Herein consists the superior independence shown in the history of the English people, compared with that of the French. In the works of revolutions, it is England that has set the example; those of France, with the exception of this last unparalleled Napoleon demonstration, have been but re-enactments of dramas which had been previously rehearsed on the English stage. The people of England will not tolerate the notion of submission, but have ever been the first, in modern history, to cast off the yoke of oppression. They have no patience with tyranny, and take the earliest opportunity of declaring their determination to be free. But this determination implies a previous state of mind—the possession of the highest faculties in the individuals who compose the nation—the whole of those qualities that go to constitute manhood or bravery. There is, in particular, a self-concentration implied—a personal reliance on interior convictions—and a correlative resistance to mere external authority, which remarkably distinguishes an Englishman. It it is the truth that makes him free, it is because it makes him, at the same time, independent; and he knows truth, not by report, but because he is a true man. An Englishman, in this respect, as an incarnation (so to speak) of truth, becomes as it were an oracle to his race; and thus it is that he takes the lead in the march of Freedom.

With the Frenchman it is, for the most part, the reverse of this. He depends much more on the approbation of his neighbour, and that in an inverse ratio to his self-esteem. Undecided in his own convictions, and weak in his own character, he lives rather in the opinion of his fellowmen, than maintains an independent existence of his own. He is a poor actor fretting and strutting his hour on life's stage, who would perish if not applauded. The applause may come from the demons in the pit, the "human mortals" in the boxes, or the gods in the galleries; but it is all the same; it is still applause. Our histrionisms may not command the praise of a Hazlitt, but it will of the callboys. To most Frenchmen it would be indifferent either. There are some who would aim at both, and evince sufficient versatility to secure both. There are time-servers and placemen, who make a point of suiting themselves to their company, and are for the occasion whatever it requires. They live to please, and so that they are pleased in return, seem to themselves to fulfil the duty for which they live.

Perhaps, after all, however, this distinction between the two countries is too broadcast. "There are rivers out of Britain:" there are also good and honest men in all countries. France possesses many men of moral and intellectual independence; England also harbours many a parasite, many a craven—

> That lets "I dare not" wait upon "I would,"
> Like the poor cat i'th' adage.

No doubt, this is the case; nevertheless, let us have been unjust in our national characteristics, our distinction must yet be maintained as between individuals. One man is proud, and another vain. That reposes on his own judgment; this depends on his neighbour's appreciation. That works for his own satisfaction; this for the recompense of reward. These broad outlines of character are very important. The former individual will devote himself to a cause, even to martyrdom; the latter will seek exclusively his own interest. The one stands alone; the other herds with the crowd: the one erect, like a "column of true majesty," resolved, bold, and unalterable; the other crouching, cajoling, artful, and ever changing. You can depend upon the one, because he depends upon himself; on the other none can depend, not even himself.

If, however, on the one hand, there is something profoundly derogatory in an excessive love of approbation, there is, on the other, frequently a repulsive and disagreeable severity in a preponderance of self-esteem. A character thoroughly amiable will blend the opposite attributes. Men like Wordsworth, who have been blest with the consciousness of superior power, have frequently been found erring by reason of this one-sidedness; while a Goethe, acting in a more social spirit, has gratefully gained over to himself the suffrages of contemporary intellects. We should respect others as well as ourselves. Society is a bundle of relations; nay, if we believe certain philosophers, the world itself is nothing more—man is nothing more. At all events, we know that "one touch of nature makes the whole kin." This "one touch of nature" let us seek to cultivate, and confess to a common fellowship. Nothing becomes the highest genius so much as the grace of condescension.

The spirit of liberty itself requires that there should be mutual concessions. Out of these arises the expediency of law. Our spontaneities require regulation. Life is of itself a method, and morality nothing but the manner in which it is spiritually developed. We owe a duty to our inferior brethren, which we should be always willing to pay. There is one great reason for this which constantly prevails with the generous. The less gifted take from us many a burthen; they bear for us the yoke which, if it galls not them, would us. Let us think continually of the saying of the elder Napoleon, "Respect the burthen!" The burdens borne by the class are various; some of them of Nature's appointing. The burthen of incapacity—what a burthen! Some are born knots; mysterious dispensation! Should we not bear with him who had to bear the burthen of idiocy? Then there are the evils imposed by society, such as exclusion from the means of knowledge. The highly-gifted should bear with the different degrees of ignorance. Let such recollect that they are teachers, others are the taught. If there should be docility on the one part, there should be amenity on the other. The crowd, too, as deficient in self-reliance, are specially open to the love and approbation of him the teacher may take advantage. We would not, therefore, have the British people flatterers, as if they were a French mob; but we would have the truth spoken to them, only in a spirit of condescension, and also such commendation bestowed on their efforts as their earnestness might merit. And thus by a reciprocation of the duties, the greatest amount of benefit may be realised, both to the man of superior talents and those whom he would have to be his disciples.

To superior genius, after all, the task ought not to be a hard one. As a productive power, its highest acts are the offspring of spontaneous benevolence. Let the same sentiment be carried out in its other relations and to its ultimate results, and the desirable harmony—the octave of the high and low—will be simultaneously produced.

There are, of course, other attributes besides those I have mentioned, by which character is distinguishable. Our faculties are legion; they are infinite in number and in excellence. It is not to be supposed that no specific man can exhibit them in their perfect combination; so that we fail to perceive any in the integrity of his nature. Every individual thus falls short of the Standard of Humanity. Thus every specimen is incomplete, because whatever faculties are exhibited, many more are concealed. Here, then, the highest and lowest are reduced to a sort of equality. Neither realizes the ideal perfection of which man, in the aggregate, is held to be capable, but every man puts forth the general idea only in parts and fragments. This sense of general defect should teach humility even to the richest in nature or fortune's gifts. Genius itself is only a prerogative instance (to use a Baconian phrase) of this defect. It is a development of certain faculties to the prejudice of others—a manifestation of aptitude in some particular direction. Let us reflect that this is a phenomenon sometimes significantly exemplified in idiots; and that thus the extremes of intellectual energy and weakness meet in a common property. For both there is evidently an appointed channel. Take either out of its appropriate elements, and it perishes: neither can exchange its sphere with the other; and, doubtless, the idiot equally with the poet has his task to perform, though we fail to appreciate, nay even to understand it. The scale of both in Creation is marked, the end of both determined, by one and the same great Authority and Original.

WORKS OF NEW NOVELISTS.
THE FAIR CAREW, or, Husbands and Wives. In Three Volumes
"The Fair Carew" evinces much of a much higher order than we are accustomed to meet in works of this character. There is a string of quiet, easy raillery pervading the whole work, that reveals a knowledge of the human heart, freedom of style, truthfulness of aim, and purity of moral."—Literary Gazette
"Clever, and very clever, this work certainly is. Both eg much smarter in style have we for some time met with. The course of the story flows on safely and steadily, and carries the interest of the reader on to the end."—Athenæum
"One of those rare works of fiction which exhibit a faithful view of human nature. Some of the characters are painted with extraordinary skill."—Sunday Times.
"The Fair Carew" is the most attractive creation that has shone for some time past in the pleasant world of fiction."—Observer
"This is a novel in which a consummate knowledge of the human heart is manifested. It probes deeply into the springs of motive and action."—Weekly Dispatch.
"One of the cleverest novels that has appeared for some time. For striking and graphic delineation of character, we can find no parallel to it save in 'Jane Eyre.'"—Weekly News.
II
FLORENCE SACKVILLE, or, Self-Dependence. By Mrs BURBURY 3 vols post 8vo.
"This is a first novel—we hope it will not be the last, by its author. Mrs Burbury possesses a clear appreciation of humour and pathos, a firm hand in noting down the boundary lines and salient features of character, and a constancy to the leading up and purpose of her story. The story of poor Milly the pathos of which is fearful—and Aunt Sally are to us in placing Mrs Burbury high among modern novelists."—Athenæum.
"The most promising novel we have met with for some time It is an extremely careful, artful piece of writing, containing several sketches of character, finished and truthful in a high degree; and the spirit in which it is written is as much to be praised as the correctness. We strongly commend this novel to favourable attention."—Examiner
III
TWO FAMILIES: an Episode in the History of Chapleton. By the Author of "Rose Douglas." In 2 vols. (Just ready.)
IV
AGATHA BEAUFORT; or, Family Pride. By the Author of "Peggy Oglvie." (Just ready.)
London: SMITH, ELDER and Co. 65, Cornhill.

To be had of all Booksellers.
INTERESTING LITERARY PRESENTS.

HOULSTONS, 82 Paul's Churchyard, and Water-lane.

I. A KEY to the EXERCISES. Price 2s 6d.
2. A READING COMPANION to the FIRST GERMAN BOOK, consisting of Extracts from the best Modern Authors, with Explanatory Notes. By the same Editors Price 4s
3. HANDBOOK of GERMAN VOCABULARY. Price 4s.
4 THE FIRST FRENCH BOOK: on the Plan of "Henry's First Latin Book." By the Rev T K ARNOLD, M.A. Price 5s 6d.
"Mr Arnold has succeeded in preparing a work admirably adapted to meet the wants of young pupils. The plan is based on the philosophical supposition of the changes of consonants together with the frequent references to Latin words and idioms by way of illustration and comparison, render our superior to all existing and other introductions, even from the pen of a native writer The sound principles of induction and repetition which have secured for the author a reputation widely extended as well deserved are here happily exercised. His accurate discrimination of idiom is very satisfactory and complete; whoever thoroughly masters it, will rarely want anything further on the subject."—Athenæum
5 A KEY to the EXERCISES. By M. DELILLE. Price 3s 6d.
6. HANDBOOK of FRENCH VOCABULARY Price 4s 6d.
Now complete in Twelve Volumes, in each; 1s 6d. extra cloth; or, in Six Double Volumes, 2s 6d. e ach, gilt edges,

VARIETIES.—Fragments of general interest.
Subscribers ordering the Stamped Edition have their copies forwarded direct from the Office, and receive it by the early mail on the morning of publication.
THE LITERARY GAZETTE is re-issued in Monthly Parts, and may be had, free of expense, in all parts of the country with the Magazines.
London: REEVE and BENHAM, 5, Henrietta-street, Covent-garden.

NEWSPAPERS.—Gratis,—A NEW LIST of all the LONDON and WESTERN PAPERS and MAGAZINES, with prices, politics, and days of publication, had gratis of JOHN NASH and CO., 5, SAVILLE-PLACE, REGENT-STREET, and 4, Upper Weymouth-street, Portland-place. The "Times" and all other daily papers forwarded by the morning and evening mails. JOHN NASH and Co. beg attention to the following Mail," it being an evening edition of "The Times," published three days a week, price 5d, in time for the morning mails. Also to the "Athenæum," a paper we l suited for the clergy and country gentlemen, published three times a week, price 5d 6d per quarter

CHRISTMAS PARTIES.—Gentlemen, during the festive season, should be careful that their Shirt-Fronts, Collars, and Wristbands are of the most fashionable description; for at no period of the year do Gentlemen undergo such close scrutiny from the fair sex—the most stoic, the waltz, and the polka giving them opportunity of detecting any little flaw in a Gentleman's exterior. Mr. DAVIS'S EUREKA SHIRTS are the perfection of airy and fit. The EUREKA SHIRTS, 7s 6d. Address, RICHARD FORD, 185, STRAND

MUSIC

NEW SONG, the POLAR STAR, dedicated to Mrs Victorina Rose. Written by AUGUSTA M. WYCKS, Authoress of "Scriptural Musings," &c. Music composed by WILLIAM LAYLAND.
"We were perfectly unobjectionable, which cannot always be said of modern musical ballads."—Worcester Herald
"A very pretty ballad, with words above the average merit of such compositions, and expressive of graceful sentiment."—New Monthly Belle Assemblée.
"The vocalist may be startled by the idea of an eight-sheet song; the length of the musical composition before us, however, will not fatigue the singer or weary the hearer, as it contains considerable variety, the melody taking a fresh movement descriptive of the words at the commencement of each verse. The air is general graceful and sweet, and the accompaniments full, and somewhat German in style. We recommend it to confidence to our musical readers."—The Critic
London: R. COCKS and Co., New Burlington-street; and of all Music-sellers.

MESSRS. COCKS'S NEW MUSICAL PUBLICATIONS
PIANO MUSIC.—Brinley Richards's Recollections of Wales, 1 to 3, each 2s. The Sinclair's Practice, 12 books, forged by ditto, 3s and 4s. The Classic Hours, Sacred Music, 12 books, 3s and 4s each. PROFESSOR OF MUSIC AT THE UNIVERSITY OF OXFORD.

MUSICAL SUPPLEMENT.] SATURDAY, DECEMBER 20, 1851. [GRATIS.

SONGS.

THE BARLEY AND THE HOP.

[AIR—"The Curly-headed Ploughboy."]

I.

'TWAS in the morning early,
The grass was wet with dew,
That young and lusty Barley
Went o'er the fields to woo.
His cheek was like the cherry,
His beard like threaded gold,
His laugh was loud and merry,
His step was brisk and bold.
He sought his lady, smiling,
And falling on his knee,
Exclaim'd, "Without beguiling,
I've come to marry thee!"

II.

Oh, modest was the maiden,
And comely to be seen,
Her robes of green array'd in,
And gemm'd with diamond sheen.
Her hair, in ringlets yellow,
Hung clust'ring o'er her eyes;
Her breath was sweet and mellow,
Like balm of summer skies.
"Sweet maid!" quoth he, "thy beauty
Excels the flaunting Vine!
To love thee is a duty;
I die to make thee mine!"

III.

All blushing to behold him,
She strove to answer, "Nay!"
But softly whisp'ring, told him
To name the happy day.
Hop shook her golden tresses,
The bearded Barley sprang,
And birds in green recesses
Their bridal chorus sang.
Long may this couple flourish
In ev'ry frothing can,
Our drooping strength to nourish,
And cheer the heart of man!

IF HIS HEART NEVER THROBB'D WITH AFFECTION.

[AIR—"Poor Robin's Maggot;" or, "If the Heart of a Man."]

I.

IF his heart never throbb'd with affection sincere,
If his eyes never glisten'd with sympathy's tear,
If still unrelenting
To Guilt, that repenting
Implored him, with sobs, not to strike, but to hear;
Untarnish'd his fame and his honour may shine,
And the praises of thousands his worth may enshrine;
But I shall not, I may not,
I will not, I dare not,
Consent to receive him as lover of mine.

II.

But if he be modest, pure-minded, and true,
If from faults of his own his best sympathies grew;
If warm in his feeling,
To Sorrow appealing,
He pities and loves where the harsh might pursue;
Unknown to the world, he may wander apart,
At the sound of his name no applauses may start;
But I shall not, I may not,
I will not, I dare not,
Refuse him my friendship, my hand, and my heart.

I LAY IN SORROW, DEEP DISTRESS'D.

[AIR—"Hey, Boys, up go we."]

I.

I LAY in sorrow, deep distress'd:
My grief a proud man heard;
His looks were cold, he gave me gold,
But not a kindly word.
My sorrow pass'd;—I paid him back
The gold he gave to me;
Then stood erect and spoke my thanks,
And bless'd his Charity.

II.

I lay in want, in grief and pain:
A poor man pass'd my way;
He bound my head, he gave me bread,
He watch'd me night and day.
How shall I pay him back again
For all he did to me?
Oh, gold is great, but greater far
Is heavenly Sympathy.

NOTES ON THE MELODIES BY SIR H. R. BISHOP.

THE BARLEY AND THE HOP.

"THE CURLY-HEADED PLOUGH-BOY," who "whistled o'er the lea," is one of those pleasing airs with which our highly-gifted and truly national composer, William Shield, has enriched the music of his country. It was written for the musical entertainment called *The Farmer*, which was first performed at Covent Garden Theatre in 1798. Of the merits of Shield as a composer it has been very justly remarked, that "he struck out for himself a style of writing, pure, chaste, and original. His prominent characteristic, however, is simplicity. No composer has ever woven so few notes into such sweet and impressive melodies, while the construction of the bass and harmony is alike natural, easy, and unaffected. We cannot open one of his operas without being instantly captivated with this quality of his music. In such delightful entertainments as *Marian* and *Rosina*, his airs breathe all the freshness, and purity, and beauty of rural life. Ballads, in all the different modes of sentiment and description, abound in his operas; and it is probable that as much of Shield's music will descend to posterity, carrying with it the intrinsic marks of English genius, as of any other writer since the days of Arne."

IF HIS HEART NEVER THROBB'D WITH AFFECTION.

"POOR ROBIN'S MAGGOT;" OR, "IF THE HEART OF A MAN."—This is one of the many beautiful airs selected by Gay for *The Beggar's Opera*. The earliest title of it we are able to trace is "Poor Robin's Maggott," or fancy; under which name it appears in *The Dancing Master*, a collection of dance-tunes, the first edition of which was published in 1650. The construction of the melody would however warrant the belief that it is much more ancient than the date of that work. A slightly altered version of it was published in *The Convivial Songster*, of 1782, to the song entitled "Would you win a young Virgin;" and is identical with that to which Gay, in 1720, wrote Macheath's song in *The Beggar's Opera*, "If the Heart of a Man is depress'd with cares."

I LAY IN SORROW, DEEP DISTRESS'D.

"HEY, BOYS, UP GO WE," from which this air has been taken, was one of the dance-tunes published about the middle of the seventeenth century, in Playford's *Dancing Master*. In the following century we meet with it in several of the ballad-operas, words having in each instance been adapted to the music. As a Cavalier song, probably with the words by D'Urfey, it is said to have been honoured with the approbation of Charles the Second. This is very doubtful; but even were it not, from that monarch's little feeling for English music, it may be surmised that the Royalist words formed the principal merit of the song in his estimation. The judicious alteration of the original measure from jig-time to what is technically termed common-time has been followed in the present instance, to the manifest improvement of the air, which affords another proof of the adaptability of many of our old and almost forgotten "tunes" to worthier purposes than those to which they have been hitherto applied.

THE BARLEY AND THE HOP.

Gaily, but not too quick.

Air, "The curly-headed Ploughboy."

THE ILLUSTRATED LONDON NEWS

No. 538—VOL. XIX.] SATURDAY, DECEMBER 27, 1851. {SIXPENCE. WITH SUPPLEMENT, GRATIS.

THE FRENCH REPUBLIC.

UNIVERSAL suffrage has confirmed the President of the French Republic in the perilous sovereignty which has been the aim of his ambition throughout life. As far as the results of the votes of Saturday and Sunday last are known, it would appear that at least three-fourths of the French people have declared themselves in favour of the extension of his powers for the ten years which he has demanded. Such unanimity is remarkable. We in England must cease to look exclusively from an English point of view upon this fact, and the events which will necessarily flow from it, and endeavour to realise to our minds what is the state of the mind of France, that not only acquiesces in the act committed by Louis Napoleon upon the 2d and 3d of December, but positively approves of it by its remarkable vote on the 20th and 21st. Perhaps, in lieu of offering to our readers any speculations written in England upon the phenomena presented by French politics at this time, we shall please them better, and aid them more effectually in forming a judgment upon the causes which have produced a result so singular, and the consequences that will ensue, by laying before them the following letter, written from Paris by a gentleman upon whose impartiality every reliance may be placed, and whose knowledge of France and of Frenchmen is both intimate and extensive. There must evidently be reasons of which we in this country are not generally aware, why a nation like the French, which has striven so long and so passionately for freedom, and which has given the world so many proofs of its enthusiasm in the cause, should, at this late period of its history, not only accept a noose but actually run its head into it—as if it preferred it—and as if, above all earthly blessings, it most coveted the luxury of having a strong-willed and inflexible master:—

"PARIS, Dec. 23.

"All traces of the late short and sharp struggle have disappeared. The gay city of Paris is even gayer than usual The Boulevards are crowded with vehicles. The fine weather of Sunday drew immense crowds of holiday folks into the Champs Elysées, the Boulevards, and all the other resorts of pleasure-seekers. The theatres are crammed every evening. The funds continue to rise; and those who affect to be in the secret assert that they will yet reach the quotation of 110 before they will either retrograde or remain stationary. Satisfaction is on every countenance. A season beyond all precedent for the brilliancy and number of its *fêtes* is anticipated. The shopkeepers are in high spirits. The prospect of that dearest of all objects, a full till, opens out before them; and though an Englishman, on recalling the events of the last few days of the present month, might see a colour of blood on the pavement, everything wears to the French at this moment that more agreeable tint of crimson, which is known as the '*couleur de rose*. may perhaps be asked whether this gaiety is not forced; and whether, like a desperate man resolved to have one day's pleasure before he takes some fatal leap or draught, the Parisians, uncertain of the future, are not determined to make the most of the present moment, and to say, like the fool, 'Let us eat and drink, for to-morrow we die.' But as far as I can judge, this is not the real state of the case. Revolutions, like other great things, loom largely when seen from afar off; and the French have a business of pleasure to do which not even street fighting is always allowed to interrupt. There was a new piece at the Opera, and it was a grand success, on the evening of the day on which Louis XVI. was beheaded: and on the night of the 3d of this month, when some very brutal massacres by the soldiers were taking place on the Boulevards, Louis Napoleon was at the French Opera, in the midst of a brilliant and crowded house, to witness the first representation of the new ballet of 'Vert, vert.' But the present state of public opinion in France seems to be not simply a passive acquiescence in the military rule which Louis Napoleon has established, and which is to last as long as he may consider it necessary, but a palpable satisfaction in being relieved by his act from the painful uncertainties of the last few months. The French know the worst which is to befal them, and they reckon that, if not for ten, at least for two

VISIT OF GENERAL MAGNAN TO THE HOSPITAL OF THE VAL DE GRACE.—(SEE NEXT PAGE.)

or three years, they shall enjoy sufficient repose to attend to their business; and they begin to love their business much better than they love theories of government.

"In fact, as far as I am enabled to judge, the prevalent ideas in the French mind seem to resolve themselves into two. The first is a kind of lassitude bordering upon disgust of politics and of political men. They are weary of revolutions. They have tried every form of government, and every form of government has failed. Nothing is stable, nothing is satisfactory. Liberty has disappointed them, interfered with their business, led to nothing but bloodshed, and just for the novelty they are quite willing to try what the strong hand will do, and to leave theories alone. The second feeling is far more potent with them. It will scarcely be credible in England to what an extent the 'Socialophobia,' if I may coin a word to express the idea, has been carried in France. Socialism is something vague, dreadful, monstrous, and insupportable in the eyes of the middle and upper classes in France. They scarcely know what it means. They make no distinction among the series of sects into which Communism and Socialism may be divided, but lump them all together, conflicting and antagonistic as they are, as the great object of their horror and execration. The most stupid exaggerations of the atrocities committed by bands of Socialists in the provinces are eagerly believed; and the Government, with its eyes open to the importance of the 'phobia,' for its own purposes, takes care to make the most of every incident. The division of the goods of the rich among the poor, community of wives as well as of fortune, robbery, murder—every crime that it is possible to imagine—is put down to the discredit of Socialism; and the unthinking *bourgeoisie* believes all. Socialism is the great bugbear of France; and weary as the French may be of revolutions, and of theories of human perfectibility—sick at heart as they may feel at continual civil commotion—I am convinced that, had it not been for the panic and horror inspired by the imaginary designs of the Socialists, Louis Napoleon would not have had the votes which have showered upon him. The proclamations upon the walls call upon the French to support 'society,' to save the 'domestic hearth' from 'spoliation and violation,' to rescue 'their wives and daughters' from the much-dreaded Communists; in short, it is a perfect frenzy. Louis Napoleon and his advisers probably know how unreasoning the fear is; but they work it pertinaciously, and have done so for months past—we have seen with what success. The working classes in Paris shrug their shoulders, and give a peculiar smile on reading these and similar proclamations, as much as to say, that, whatever truth or falsehood there may be in the allegations against Socialism, the day of the working classes is yet to come. One thing seems tolerably certain, that Louis Napoleon need not fear the working classes at present. All parties, seeing the triumph he has achieved, and the legal authority which has been given him by so many millions of voters, are ready to fold their arms and await events. We shall know in a week or two what kind of a Constitution is to be *octroyée* by the congenial spirits of the Elysée, and how large or how small is to be the amount of liberty to be enjoyed by the French. We shall also see the end of the present provisional ministry, and whether any of the men of talent, character, and influence in the country will accept the Government as a Government *de facto*, and in that capacity consent to serve it, if not for its own sake, for the sake of France. We shall also see whether the President will relax in the rigour of his military rule, now that his seat seems secured to him; and whether the army will consent to remain under the odium of having no other and more brilliant work to do than a civil warfare. The position of the President for the next few months will be one of extraordinary difficulty. People will not always be contented to be deprived of the liberty of speech and writing; and the army will yell, like the hounds of Acteon, if it do not get flesh for its tooth in some part of Europe or Africa. *Mais nous verrons.* In the meantime Paris laughs, and sings, and rejoices; and men with small or with large fortunes, and men striving to reach a similar position, rub their hands for satisfaction, and exclaim with the *Constitutionnel*, Now we can breathe!"

ILLUSTRATIONS OF THE PRESIDENTIAL ELECTION.

At page 776 we have illustrated what may be termed the official machinery of the Presidential Election. The first Engraving shows a long line of voters applying at the Municipality, or Mairie, for their voting tickets. The issue commenced on Wednesday week, and continued on Thursday. The crowds at the different places were very great, and of all classes. At first, from the immense number of applicants, some confusion ensued; but order was soon restored, and the issue proceeded in the regularity shown in the Illustration. The second Illustration shows one of the polling-places, with a number of voters proceeding in the most orderly manner to give their votes.

VISIT OF GENERAL MAGNAN TO THE HOSPITAL OF THE VAL DE GRACE.

The Illustration upon the preceding page shows a pacific incident in the records of the last month in Paris; viz. General Magnan, attended by his staff, proceeding to visit the wounded in the military Hospital of the Val de Grace, whither great numbers of persons were carried during the Insurrection. The Val de Grace is placed in what was once the most richly-ornamented convent of Paris. It is situated in the Rue St. Jaques: the architecture is by the elder Mansard; the vaults of the dome is beautifully painted on stone by Mignand, and is reputed to be one of the finest frescoes in France.

English Prisoners in Morocco.—The *Journal des Débats* borrows from the *Spanish Military Gazette* the following details relative to the shipwrecked English who have fallen into the hands of Moorish pirates. They are extracted from a letter dated Melilla, Nov. 16:—"The English crew are still in the power of the people of Riff; one sailor is dead: whether naturally or not, is unknown. There are five remaining; it is believed that they would speedily be delivered, as a merchant vessel freighted by the English Consul at Malaga had come to convey them to Gibraltar, but the natives have raised their claim, and now demand 200 dollars (£40) per head. These poor sailors, since the beginning of their captivity, have slept on the bare ground, which is a great hardship in the present season, and after being deprived of their clothes. Their only food sailors are accustomed, and which is of no service in enabling them to support the inclemency of the weather."

Treaty between Great Britain and the Sandwich Islands.—A copy of the treaty of friendship, commerce, and navigation, between Great Britain and the Sandwich Islands, signed at Honolulu on the 10th of July last, has just been received. It is one of entire reciprocal freedom, with the exception, as regards navigation, of the coasting trade of the respective countries. British whalers are to enjoy the privileges lately conceded also to those of the United States of entering certain ports in addition to Honolulu and Lahaina, and are to be allowed to trade to the amount of 200 dols. without the payment of duties of any kind. They may also, upon paying the ordinary import or export charges. A provision is inserted for the surrender of naval or military deserters, which, in consequence of the proximity to California, is not without importance; and there is also a clause for the establishment of a British packet agency, in case there should at any time be established British mail-packets touching at a port of the islands. The ratification of the treaty is to take place by the 10th of May next.

New Zealand.—A Parliamentary blue book has just been printed, containing a great deal of statistical information respecting New Zealand. Last year the population of the colony was 4067, being an increase of 675 on the previous year. The actual revenue of the year 1850 was £2905 16s. 8d., and the expenditure £3018 19s. 11d. In 1850 the exports were £7.16, being a decrease of £1376 10s. on the preceding year. It is stated that the decrease had arisen by the increased population consuming the flour which otherwise would have been exported. In 1850 the imports were £17,807 2s 6d., being an increase of £3258 1s. 6d. on the preceding year. There has been a great increase in the number of acres fenced, cleared, and cultivated last year, compared with 1849. It appears that the native population within the districts of Wellington, Wakanui, Otaki, Manawatu, Rangitike, and Wairarapa, in the province of New Munster, is 4711, of which number 2955 are Christians. Of those stated to be Christians, 1148 can read and write, and 444 can read only. There are 39 churches and chapels within the province.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

Paris, Wednesday, Dec. 24.

The agitation of politics has not arrested the advance of grand architectural improvements in progress in Paris for a single day. The sum of two millions of francs has been allocated within the last few days for indemnifying the inhabitants of the houses in course of demolition between the Tuileries and the Hôtel de Ville. In connexion with the union of the two palaces, the Louvre and the Tuileries, which forms part of this magnificent plan, the long-desired *locale* for the annual exhibition of modern paintings and sculpture has at length been determined upon. It is to be the new gallery about to be constructed, extending from the Rue de Rivoli to that part of the Louvre which forms the wing corresponding to the entrance of the museum. This wing, which must be familiar to every visitor to Paris from its ruinous unsightly appearance, having been commenced under the Empire, was never completed. It will now be finished, and form the entrance of the modern gallery, which will join that part of the Tuileries at present used as a barracks, and form the north side of the Place du Carrousel. The architecture and decorations will match that of the opposite gallery facing the Seine. The Place du Carrousel is to be considerably lowered, so as to give the arcades opening to the river side more elevation, and, consequently, a more imposing effect. This will also allow of a terrace, which it is intended to raise at the entrance of the Louvre, facing the Place du Carrousel. It is to be reached by flights of steps, and decorated with vases and statues. Judging from the plans, these improvements, when completed, bid fair to render the Place du Carrousel one of the most magnificent palatial courts in Europe.

Among the other architectural ornaments of the capital, the intended renovation of the Church of St. Geneviève (the Pantheon) must not be forgotten. This splendid temple, which has just been restored to the service of religion for which it was originally raised, dedicated to St. Geneviève, is even more interesting from the historical facts connected with it, than from the magnificence of its architecture and the splendour of its internal decorations. The first Christian church built in Paris was constructed in the immediate vicinity of the present edifice at the commencement of the fourth century, in the reign of Clovis, whose body, together with that of the patron saint, St. Geneviève, was one day buried in this denomination, with its shrines and other sacred insignia of the faith, transferred to the present building. It was desecrated by the sanguinary mobs of 1793, when it was converted into a Temple of Reason, and a last resting-place for great men—the ignoble Marat being there interred by the side of Voltaire and Jean Jaques Rousseau. Napoleon, in 1806, restored it to its religious purposes, and it remained "l'Eglise St. Geneviève" until 1830, when it was again deprived of its sacred character, in obedience to the short and popular frenzy of that day. Great embellishments were added by the late King, who made it a temple to receive the remains of great public characters who died while in the service of their country—a step that cost that Monarch the goodwill of the clergy, which he was never afterwards able to regain. The whole cost of the building is set down at 25,000,000 francs—a sum which will be considerably increased by the renovation it is now about to undergo; and which, it is said, will render it one of the most splendid churches in France.

I must not part with architecture without mentioning that an enterprising Vitruvius has constructed a house near Clichy entirely of hats, the only material used being old hats, of which 80,000 were required for the construction. The architect declares that his house is more warm, more secure, and altogether superior to any dwelling of the same size in Europe.

Some sensation has been excited here among the English residents by a report of a Mr. Flynton, who died here a few days since, having, "by his last will and testament," left to the celebrated Countess of Bocarmé the whole of his fortune. This is found, however, to require preliminary proceedings, to have the testament annulled on the ground of lunacy.

The celebrated Gunsoo has appeared at the Italian Opera in Verdi's "Ernani," and though he came out at a moment the most unfavourable, in the very midst of the din and tumult of insurrection, was at once recognised as one of the greatest *artistes* of the age. I shall turn to this fine singer in his next character. Mdlle. Cruveili appeared last week in Donizetti's "Figlia del Reggimento," but, in spite of all her genius and the charming freshness of her voice, she does not please like Sontag, who's assumed awkwardness and airs of the camp were irresistibly delightful. Mdlle. Cruveili requires the stronger elements of high dramatic passion to call forth her powers: without them she is nothing—with them the most elaborate perfection of vocal skill appears tame and inanimate in comparison.

Mdlle. Rachel has made her *rentrée* at the Français in her best character, *Camille*, in Corneille's "Horaces." Though the great tragedian was unable to excite interest in Italy—for a decided failure the excursion is stated on all sides to have been—her enthusiastic reception at home must have afforded ample compensation for the wounds of her *amour propre*. Her impersonation of *Camille* was grand beyond description; and, though her reappearance took place at a moment when the *emeute* was at its height, every part of the theatre was crammed. She has since appeared in Scribe's drama, "Adrienne Lecouvreur," in which she also performed well—but it is not Rachel: the part is not of sufficient force to call forth her genius; besides which, the long dying scene with which the play closes is simply a distressing display of physical sufferings, fitter for the Porte St. Martin than the Français. A sister of Mdlle. Rachel, Mdlle. Sarah Felix, engaged at present at the Odéon, has been essaying several characters in the highest order of comedy. Her performance has that degree of merit that you cannot find anything in it positively to censure, but it contains, unfortunately, nothing to make one forget either the actress or the stage. Some of our critics, however, always remembering she is the sister of *the* Rachel, are exuberant in their praises, and are doing their best to spoil her with self-conceit.

FRANCE.

The election of Prince Louis Napoleon as supreme head of the Executive may be regarded as a *fait accompli*; for, although the official returns of the number of votes in his favour or against him have not yet been made up, and will not be completed prior to Tuesday or Wednesday next, yet sufficient has become known as to the main result of the examination of the electoral returns to show that the vast majority of the nation, in fact, nine-tenths of the electors, have availed themselves of the restored right of universal suffrage to pronounce in favour of his assuming the chief office in the State for the next ten years, and undertaking the herculean task of giving a practical and working political constitution to France.

The returns from all parts of the country, including also the metropolis, as far as they are yet known, show that 5,100,000 electors have voted in the affirmative, or for Louis Napoleon, while only 800,000 have voted in the negative, or against him. This extraordinary success surpasses the anticipations of the most ardent adherents of the Elysée.

The *Times* correspondent notices some curious specimens of comment, laudatory and otherwise, which have been found attached to several of the voting tickets. He says:

"Nearly 1200 of these tickets have been annulled, in consequences of their containing words of an illegal character, or eulogistic of the President, without speaking of events of all kinds. Some of these commentaries have been found to be of a menacing character. For instance, in one section of the sixth *arrondissement* a bulletin to the following effect was found:—"*Non!* from hatred to caposism, from respect to legality, from contempt for Louis Napoleon Bonaparte, ex-President of the Republic." "*Oui!* under the pressure of the state of siege, from fear of bayonets, and for the death of French honour."

In a section of the seventh *arrondissement* others were found to this effect:—"*Non!* because the Constitution has been audaciously violated by a General of intoxicated soldiers." "*Non!* because Bonaparte committed, on the 2d of December, the greatest of crimes." "*Non!* because to say '*Oui*' would be to approve of pillage, robbery, and assassination." "*Non!* because I wish for the maintenance of the Republic, and the development of its first nations." "*Non!* because, for the satisfaction of justice, Bonaparte and his accomplices ought to be capitally punished."

In the same section, however, were found tickets of another description. Over the word "*Oui!*" written or printed in large letters, were the words "Louis Bonaparte is the friend of humanity. He will save France from the brigands of Socialism." On another, equally large, were—"Vive Louis Napoleon Bonaparte—the man who has saved us; and may he soon be our Emperor!"

In a section of the twelfth *arrondissement* was found one with a still more significant comment than any yet noted, thus—"*Non!* in the name of family, of religion, and of property. In the name of family, for France cannot be ruled by a ——. (Here follows an indecent expression.) In the name of religion, for France cannot be governed by those who have violated their oaths. In the name of property, for France cannot be governed by those who pay no regard to that of their neighbours. *Non!*"

In the same *arrondissement* about a hundred tickets, I am assured, were found alternately sarcastic and laudatory; for instance, "Oui, that Bonaparte may be always our President." "Vive le Neveu de l'Empereur!" "Heaven protect our France." "He has saved France." "Long live the Emperor Napoleon and his nephew!" On some were found merely "A bas Ratapoil," but without either the affirmative or negative monosyllable, "Ratapoil" is a creation of the *Charivari*, and was supposed by that witty journal to impersonate the military qualities of the Society of the Dix-Décembre. All these and similar tickets were set aside, and they appeared to produce rather an unpleasant effect on the numerous persons present.

There is a singular dearth of news on all other topics, as though the all-important question of the Presidential election had absorbed everything else, and stood out alone, in bold relief, the great fact of the week.

Several decrees have been issued during the week, by which the organisation of the gendarmerie throughout the entire country has been modified, and fifteen generals of brigade, twenty colonels, and various lieutenant-colonels in the army have been promoted to the next superior rank.

The ex-representatives, MM. Duvergier de Hauranne and Bixio and General Laydet, lately confined at St. Pélagie, were set at liberty on Monday.

M. Napoleon Bonaparte, son of the ex-King Jerome, it is understood, has acceded to an intimation sent him, on the part of his cousin, the President, to leave France, and has quitted Paris for London. M. J. Favre has also taken his passport for a foreign country.

A new law of the press is spoken of, which, if its rumoured provisions are carried out, will be found a very restrictive one, and not likely to promote what is regarded at the present day as "the liberty of the press." It is said that it will repeal all existing laws on the subject, and will enact as follows:—

Every editor of a journal at present in existence, or to be published in future, will be bound to deposit security money to the amount of 200,000f. (£8000), which in case of conviction may be increased to 400,000f.

The Executive Power will reserve to itself the right to suspend the publication of any journal of which the suspension may appear necessary.

Offences of the press are no longer to be submitted to a jury. Special tribunals are to be constituted for that purpose.

Offences of the press are to be classed in three catalogues:—

1st. An attack on the President and on the principle of Government.

2d. Excitement hatred amongst citizens.

3d. An attack on religion, family, or property.

Each of these offences may be punished by imprisonment for five years, by transportation for 20 years, or by a fine of from 5000f. to 100,000f.

The President has terminated the draft of the Constitution. He asked the advice of several persons, it is said, on various points, but it is himself alone who has drawn it up, and M. de Persigny who has copied it. It is to be promulgated immediately after the proclamation of the result of the vote for the Presidential election.

SPAIN.

We learn from Madrid, by telegraphic despatch, that the Queen Isabella was delivered of a Princess on the 20th inst.

PORTUGAL.

Accounts from Lisbon, dated the 19th inst., state that the Queen opened the Cortes on the 15th, in a speech which promised reforms, retrenchments, a railroad to Spain, and other improvements. Representations from the freeholders and the Bank proprietors had been addressed to her Majesty, but apparently with little success.

The news of the late French Revolution appears to have given great satisfaction to most of the Portuguese.

UNITED STATES.

We have accounts from New York to the 9th inst.

The triumphant entry of Kossuth into New York on Saturday, the 6th inst., is almost the only subject noticed in the advices by this arrival.

Kossuth landed at Castle Garden at twelve o'clock, and immediately the procession entered New York. It consisted of twelve regiments of militia, and carriages containing the Governor and Lieutenant-Governor of the state of New York, senators and representatives in Congress, heads of departments of the United States, senators and members of Assembly of the State, officers of the army and navy of the United States, joint special committee of the Common Council, the Board of Aldermen, Recorder, City Judge, and District Attorney, and members of the bar.

In the streets through which the procession passed various devices of welcome were displayed, and the enthusiasm of the crowds by which they were filled was unbounded. Kossuth was subsequently present at the review in the Park, and in the course of the afternoon briefly addressed large assemblages from the balcony of his hotel.

The *New York Herald* thus speaks of the "demonstration:"—

The reception of Kossuth by the city of New York, on Saturday, was a spectacle of the most imposing character. The scene on the Bay, on Castle Garden, on the battery, in the park, and for three miles along Broadway—the banners, and the arches, and the grand procession, the thunder of the cannon and the shouting, the whole moving panorama of the day—was something for the recollection of a lifetime. At two o'clock there were not less probably than two hundred and fifty thousand people in and near Broadway. The moral effect of this pageant will be felt throughout this vast Republic, throughout the Continent, and throughout Christendom. It is the first grand response of the people, the sovereign people, the free, independent, generous, and powerful people of the United states, to the principles of Republicanism, of which Kossuth is the exponent and the champion. There appeared to be a general knowledge in the multitude that the reception was destined to fall upon the popular mind across the Atlantic; and that Austria, Russia, and even France, would feel the weight of the rebuke against them of "the young giant of America." The movement, indeed, doubtless be followed up, and it is possible that the influence of American enthusiasm may rebound with startling effect upon the slumbering elements of revolutions in Europe.

On the following Sunday and Monday Kossuth did not appear in public; but several meetings were held to make arrangements for dinners which it is proposed to invite him to, and for the presentation of addresses.

The President's son and private secretary, Mr. P. Fillmore, had waited upon Kossuth at the Irving House, on the day of his arrival. Mr. Fillmore had been called to Washington in his respects to the Governor of Hungary, now the guest of the city of New York. His father, the President, would be pleased to see and welcome him at the seat of Government, and desired to know when it was his intention to be in Washington. Kossuth replied that his movements were uncertain, and it was somewhat doubtful whether he should go to Washington at all. The course of the United States Senate in reference to his visit there made his situation far from agreeable, and himself undetermined in his intentions; and Fillmore was politely informed that circumstances would self-invited to the country by an act of Congress initiated in the Senate. Now, had I known that, in the same place where I was invited, the same body would now decline to bid me welcome, I would have thought that I was not a welcomed guest: so much the more as the President of the United States has formally invited the Congress in his message to consider what steps are to be taken to receive the man for whom he sent a frigate to Asia, complying with the will of the same body in which now a resolution of no further political tendency—the simple resolution to bid me a welcome—was withdrawn, on account of an expected opposition. Under such circumstances I would not have wished to intrude.

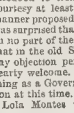
In the Senate, at Washington, on the 8th, Mr. Seward introduced his resolution welcoming Kossuth to the nation and the capital. He asked that it be read a second time now, with the purpose of acting on it. Mr. Shields, of Illinois, introduced to resolution, which he intended to move as an amendment to Mr. Seward's resolution, to the effect that a committee of three senators be appointed by the Chair to introduce Louis

Kossuth to the Senate of the United States. He said the same course was pursued in the case of Lafayette. Each branch of Congress received him separately. He proposed now to adopt a similar course in the reception of Kossuth. Kossuth was now the guest of the nation, and, if it was intended to treat him courteously, it should be done in the spirit of courtesy at least. He could see no impropriety in receiving him in the manner proposed, and was sorry Mr. Foote's resolution was withdrawn. He was surprised that Mr. Underwood should have objected to that resolution. In no part of the world would Kossuth be received more enthusiastically than in the old State of Kentucky. Mr. Underwood disclaimed having any objection personally to the reception of Kossuth, and giving him a hearty welcome. What he objected to was the Government doing the thing as a Government. He objected to the consideration of the resolution at this time. The subject then dropped.

Lola Montes was at New York, in search of an engagement as *danseuse*.

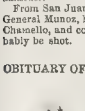
From San Juan de Nicaragua we learn that on the 19th of November General Munoz, his officers, and 27 Americans, were captured by General Chamorro, and committed to prison, and that the whole party will probably be shot.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.



SIR F. L. ROGERS, BART.

Sir Frederick Leman Rogers, seventh Baronet, of Wivelscombe, in the county of Devon, was the eldest son of Sir Frederick Leman, the fifth Baronet, M.P. for and Recorder of Plymouth: he was born the 11th February, 1792, and succeeded to the Baronetcy on the demise of his eldest brother, Sir John Leman, the sixth Baronet, the 10th December, 1847. Sir Frederick Leman, the seventh Baronet, had married, the 12th April, 1810, Sophia, daughter of Colonel Charles Russel Deare, of the Bengal Artillery, a gallant officer, who fell in action in 1791. By this lady, Sir Frederick leaves, besides three other sons and four daughters, as eldest son and successor, Frederick, now the eighth Baronet, born the 31st of June, 1811, and married, the 29th Sept., 1847, to Georgiana Mary, daughter of Andrew Colvil, Esq., of Ochiltree and Craigflower, N.B. Sir Frederick Leman, the seventh Baronet, died on the 13th inst., at his seat, Blachford, Devonshire.



SIR BRUCE CHICHESTER, BART.

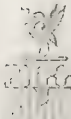
Sir John Palmer Bruce Chichester, Bart., of Arlington Court, in the county of Devon, was the eldest son of Colonel John Palmer Chichester, by his wife, Agnes Hamilton, niece of the celebrated traveller James Bruce, of Kinnaird. Sir John Palmer Bruce Chichester was created a Baronet in June, 1840. He had previous y served in the British Navy, and had married, in 1838, Caroline, daughter of Thomas Trenchard Wait, Esq., of Southwick Park, Hants, by whom he had a son and successor, the present Baronet, born in 1843. Sir John died at his residence in Eaton square, on the 15th inst. Sir John Chichester was first cousin of the gallant Sir Charles Chichester, who so distinguished himself in the service of the Queen of Spain.

SIR T. S. GOOCH, BART.

Sir Thomas Sherlock Gooch, fifth Baronet, of Benacre Hall, in Suffolk, late representative of an old and honourable Suffolk family, was the eldest son of Sir Thomas, the fourth Baronet, by his wife, Anna Maria, daughter of Sir Surrey: he was born in 1795, and married, in 1826, Mariana, daughter of Abraham Whitaker, Esq., of Lister House, county Hereford, and sister of Charlotte Maria, Countess of Bradford, and of Lady Wilbraham. By her the venerable Baronet had issue three sons and three daughters. The eldest son is his successor, Sir Thomas Sherlock Gooch, the sixth Baronet, who has been twice married, and has issue by both alliances. Sir Thomas Sherlock Gooch died at his seat, Benacre Hall, on the 16th inst., in his 85th year.

William Hayward, Esq.,

The first Baronet of this family was William Gooch, a distinguished soldier in the wars of Queen Anne's time, and Colonial Governor of Virginia, who was created a Baronet the 4th Nov., 1746



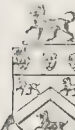
J. M. W. TURNER, ESQ., R.A.

Joseph Mallord William Turner, one of the first landscape-painters this country has produced, was born in Maiden-lane, Covent-garden, in 1775. His father, (the son, it is said, of a barber), he had the advantages of an accurate rather than a liberal education. His primary studies, some of which are still in existence, were architectural designs. Before he had completed his thirtieth year he was on the high road to fame. As early as 1799 he exhibited his first work, a water-colour drawing of the entrance to Lambeth Palace, at the annual exhibition of the Royal Academy; and in 1796 his first oil painting. In November, 1799, he was elected an associate; and in February, 1802, he attained the rank of a Royal Academician. We shall not here attempt to trace the vast series of his paintings, from the earlier productions, such as "Wreck," in Lord Yarborough's collection; the "Italian Landscape," in the same gallery; the pendent to Lord Ellesmere's Vandervelde; or Mr. Munro's "Venus and Adonis," in the Titianesque manner, to the more modern and original, and, as some think, unintelligible productions of his later years, such as "Rome," the "Venice," the "Golden Bough," the "Témeraire," and the "Decline." But, while these great works processed rapidly from his palette, his powers of design were no less actively engaged in the execution of those marvellous drawings that have formed the basis of the modern school of "illustration." The series was immense, embracing the topography of this country in the "River Scenery" and the "Southern Coast"—the scenery of the Alps, of Italy, and great part of Europe—and the ideal creations of our poets, from Milton to Scott and Rogers, all imbued with the brilliancy of a genius which seemed to address itself more peculiarly to the world at large when it adopted the popular form of engraving. These drawings are now widely diffused in England, and form the basis of several important collections, such as those of Petworth, of Mr. Windus, Mr. Fawkes, and Mr. Munro. So great is the value of a set, that one hundred and twenty guineas have not unfrequently been paid for a small sketch in water-colours; and a sketch-book, containing chalk drawings of one of Turner's river tours on the Continent, has brought the enormous sum of 600 guineas. The prices of his more finished oil paintings have ranged in the last few years from 700 to 1200 or 1400 guineas. All his works may now be said to have acquired triple or quadruple the value originally paid for them. He had undoubtedly realised a very large fortune, and great curiosity will be felt to ascertain the posthumous use he has made of it. His personal habits were peculiar, and even penurious; but in all those related to his art he was generous to munificence. And we are not without hope that his last intentions were for the benefit of the nation, and the preservation of his own fame. He was never married, nor was not known to have any relatives nearer than cousins; and his wants were limited. He resided for many years in the same house in Queen Anne street were the pictures by his own hand, which he had constantly refused to part with at any price: of these the "Rise and Fall of Carthage" and the "Crossing the Brook" rank among the choicest specimens of his first manner.

This great painter, not inaptly termed the English Claude, died on the 20th instant, aged 77. Mr. Turner has always maintained the utmost reticence in pecuniary done, and we believe there is no painting of him. A sketch, however, remarkably like him, taken without his knowledge, appeared in No. 158 of the Illustrated London News: it was accompanied by a detailed account of his principal productions.

W. F. HANDLEY, ESQ.

William Farnworth Handley, Esq., of Newark, Notts, an eminent banker there, and a magistrate and deputy-lieutenant for the county of Nottingham, was born on the 9th Oct., 1790. His career in the business of banking was most prosperous; his firm, of which he was the senior partner, was that of Handley, Peacock, and Co., having establishments at Newark, Sleaford, and other neighbouring places. Mr. Handley represented the borough of Newark in Parliament for a short period, some years ago, in conjunction with his friend, the present Lord Chancellor, then Mr Serjeant Wilde. Mr. Handley never married, and his very large real and personal property will devolve, it is said, on his three nephews and two nieces, the children of his next brother, John Handley, Esq., of Muskham Grange, Notts. Mr William Farnworth Handley died on the 4th instant, at his residence, North-gate, Newark.



DR SADLEIR.

The Rev. Dr. Frane Sadleir, Provost of Trinity College, Dublin, was the second son of the late Thomas Sadleir, Esq., of Co leto , and the uncle of Thomas Sadleir, Esq., of the same place, and of Board of Works, both in Tipperary, the present representative of the Irish branch of that good and honourable family. The future provost was born in 1778. Having become an assiduous student of Trinity College, he obtained a fellowship there in 1815, and he was appointed provost on the death of his predecessor, the Rev. Dr. Lloyd, in 1834. Endowed with much literary of fortune, and great kindness of heart, the deceased provost Sadleir filled his high and important office with the most satisfactory manner to all those with whom he came in contact. Dr Sadleir was a Whig, and his advocacy of Catholic emancipation during the struggle of that measure was earnest and unceasing. Dr. Sadleir married Letitia, daughter of Joseph Greer, Esq., of Belgrove-a, in the King's County, by whom he leaves four sons and a daughter. The rev. provost died on the 14th inst., aged 78.

The family of Sadleir is one of high distinction, both in England and Ireland, and springs from the famous Sir Ralph Sadeir, of the time of Henry VIII. and Queen Elizabeth.

DR. PRIESSNITZ.

Vincent Priessnitz, Doctor in Medicine, the celebrated discoverer of what is called the water cure, was a native of Prussia, and was born the 5th October, 1800. He was of humble parentage, and led himself a lowly life, until the idea of healing mankind by the aid of water only occupied his thoughts and energy, and attracted for him a cosmopolite notoriety. Of his singular establishment at Greffenberg, in the Brandenburg province of Prussia; of its strange sanitary system of wet sheets, douches, and diet; of the numbers and enthusiasm of its votaries, of the imitations and imitators of this new quackery throughout Europe, and particularly in England, so much has been said and written, and so much is known that the subject needs not here further detail or comment. The judgment of the Paris Academy of Medicine upon Priessnitz and his so-called discovery of hydropathy is this:—That learned body says, "that, without being a universal panacea, the use of cold water in certain cases is decidedly beneficial, and that its effects in the medicinal art were long known before the time of Priessnitz." Whether this be so or not Dr. Priessnitz was true to his own views to the last. When the illness of death came upon him, he clung still to his own cure, and refused all extraneous aid. He died on the 28th ult., in his 52nd year—rather an early age for one who had found out a wonderful secret for prolonging life.

WILLIAM JACOB, ESQ., F.R.S.

This venerable and profound writer on science and agriculture was born in 1762. His work entitled "An Inquiry into the Precious Metals" has been held in high estimation. His other principal productions were "Considerations on the Price of Corn;" "Tracts on Corn-Laws;" "View of Agriculture in Germany," Mr. Jacob, who was formerly Comptroller of Corn Returns in the Board of Trade, died on the 17th instant, at his residence, Cadogan-place, aged 88.

REAR-ADMIRAL RENWICK.

Rear-Admiral Thomas Renwick entered the British Navy early in life, and was midshipman of the *Brunswick* in Howe's action, and lieutenant of the *St. Florenzo* during her spirited escape from the mutinous fleet at the Nore. He was at the capture of the French frigates *Resistance* and *Loire*, in 1797. He also assisted at the taking of the French frigate *Seine* (which the *St. Florenzo* hove off the shore), and of several corvettes and privateers. The *St. Florenzo*, whilst Renwick was still on board that vessel, in company with the *Amazon*, boarded three French frigates near Belleisle, in 1798. While commanding the *Combatant* and *Mercurius*, Renwick was actively employed in the North Seas and the Baltic, and received the thanks of the Commander-in-Chief for important services. The Admiral died on the 3rd instant, at Clifton, near Bristol. It was Admiral Renwick's suggestions and recommendations that led to the formation of the present Coast-guard Service. The Rev. T. R. Smyly, Rector of Charlinch, Bridgwater, is married to a daughter of Admiral Renwick.

GENERAL ANDERSON.

General Paul Anderson, C.B., K.C., Colonel of the 78th Highlanders, and late Governor of Pendennis Castle, was the second son of James Anderson, Esq., of Grace Dieu, in the county of Waterford, by his wife Susanna, youngest daughter of Crustmas Paul, Esq

Paul Anderson entered the British army March 31, 1788, and rose through all the grades to that of Lieut.-General, which he attained Jan. 10, 1837. He was made a General by brevet in 1851. His services were many and valuable. He was in the storming of the Spanish redoubt, the siege of Cadiz, and in the West Indies. He was wounded in the side at the attack on Morne Chapel, St. Lucia. He acted as aide de-camp to Gen. Sir John Moore in the expedition to Holland, and also to Egypt, where he was wounded in the arm. He was in the Walcheren expedition, and at the siege of Flushing. In the last glorious moments of Sir John Moore, Anderson was his faithful companion.

The following note is attached to a sash placed in the United Service Museum:—

"My dear Hay,—I send you my sash, which was used in carrying my noble and lamented friend Sir John Moore from the field of battle at Corunna into the town, and afterwards in letting him down into his grave at the ramparts, where he was buried by his persons. staff, as he always made me promise that wherever he fell there should he be interred; and I have to request that you will present it to the Committee of the United Service Museum, in order that it may remain it worthy to be preserved in that institution as a relic of that great man who devoted his life to the service of his country.—I remain, &c.,

"P. Anderson, Lieutenant-General."

The gallant General Anderson d'ed in Bath on the 17th inst.

Munificent Bequests to Charitable Institutions.—The late Miss Elizabeth Sebbon, of Islington, has left certain leg cies, altogether exceeding £70 000, to the following religious and charitable institutions; viz. £1,000 to the Missionary Society, £1,000 to the British and Foreign Bible Society, the Deaf and Dumb Asylum, and to the School for the Indigent Blind, St. George's-fields, £2000 to each; to the National Benevolent Institution, and the Friendly Female Society, £7000 to each; to the Society for Clergymen Disabled by Sickness, £2500 to each; to the Governesses' Benevolent Institution, £1000; to the City Missionary, the British and Foreign Sailors' Society, and the Prince Albert's Labourers' Friend Society, each £2000; and to the Islington Dispensary. £200, all free of legacy duty. Mrs. Benwell takes a like interest in £30,000. The personal estate was estimated at £120,000, being independent of the freehold estate. This benevolent lady, from her long residence in her property near Highbury, and her numerous acts of generosity, had become endeared to all, both rich and poor, who were constant witnesses of her liberality and open heart. Servants had lived with her for periods varying from 20 to 45 years. She lived to the age of 72, without the interposing of any illness, till the last, which was of short duration. She died at her residence, Sebbon's-buildings, on the 28th of November last.

The late Mrs. Anna Maria Everett, of Bedford-square, has bequeathed to the Foundling Hospital, the Bloomsbury Dispensary, the Charlotte-street Lying-in Charity, and the St. Giles's Charity Schools, to each £50, free of duty.

The late John Mills, Esq., of Bath, has left the Stamford and Rutland General Infirmary £100; and to the Society for Promoting Christian Knowledge, £50.

By will of the late Solicitor to the Treasury, George Maule, Esq., has been proved in Doctors' Commons, and the personal estate valued at £45,000.

The late Mrs. Maria Taylor, of Brighton, died possessed of £100,000. Her son is left principa. legate

General the Right Hon. Lord De Blaquiere has bequeathed the bulk of his property to his housekeeper.

The Commissioners of Woods and Forests.—A Parliamentary blue book has just been issued containing the report of the Commissioners of Woods and Forests, dated 30th July last. The total receipts of the commissioners for the year ending 31st March, 1850, amounted to £1,338,027 19s. 5d., and the expenditure to £841,533 11s. 10d., leaving a balance of £496 494 7s. 7d., of which £246,646 2s. 5d. was in cash, and £226,948 2s. 2d. was due from individuals. The liabilities of the commissioners on the 31st March last were £1,258,454, of which £1,228,480 was for principal due, and £29,983 16s. 8d. for interest.

City Orthopædic Hospital.—A very full meeting was held on the 20th inst., at the London Tavern; Ralph Lindsay, Esq., F.S.A., in the chair. John Gurney Fry, Esq., and James Gurney, Esq., were unanimously elected as trustees, and J. Ivatt Briscoe, Esq., as vice-president. The report stated that there were 366 patients on the books, the immediate admission without the letters of recommendation causing a great number of new applicants to apply for relief. Among the donations announced was the liberal one of £100 from the chairman, who has on previous occasions rendered efficient service to the charity.

The Aurora Borealis was seen from Messrs. Ellis and Son's observatory, Exeter, on Tuesday evening, from 9.58 to 10.20 local mean time.

The Society of the Inner Temple has admitted the members of the Universities of London and Durham to the same privileges as those enjoyed by the members of the Universities of Oxford, Cambridge, and Dublin.

Mrs. Bloomer, author of the new style of dress, has an article in the last number of her American paper, in which she says that, could she have foreseen the notoriety and ridicule which she has incurred, she would never have commenced the movement.

It is intended to hold a Protestant meeting in Liverpool, early next year, to take into consideration the Maynooth grant.

Prince Albert has generously transmitted to the treasurer of the Slough Mechanics' Institution a cheque for £20, as his Royal Highness' donation to its funds.

The Government have refused to take upon themselves the guardianship of the birthplace of the poet of England; the debt of £400 still remains unliquidated by the committee who effected its purchase; affairs are, therefore, in *statu quo*.

A Vienna letter of the 19th, in the *New Prussian Gazette* of Berlin, states that Marshal Radetzsky has received the most extensive powers to crush with great energy any revolutionary movement in Lombardy.

"The Austrian and Russian powers is in part drawn by the following statistics. data:—In the year 1462 the Russian empire covered an area of 100,000 square miles, and its population was 6,000,000. In 1584 the same area was 7,500,000 square miles; population, 12,000,000. In 1689, 14,000,000 square miles; population, 15,000,000. In 1725, 19,000,000 square miles; population, 20 000 000. In 1825, 50 500 000 square miles; population, 55,00,0,000. In 1851, 60,000,000 square miles; population, 65,000,000.

On Tuesday the b s of an emigrant, on board the ship *Oregon*, lying in the Prince's Dock, Liverpool, was struck broken open, and £600 stolen. £570 was in sovereigns; there were also four £50 Bank of England notes, two £10, and two £5 notes.

ELECTION INTELLIGENCE.

Greenwich.—The address of Admiral Stewart to the electors has been issued, apologising for his non-appearance amongst them, having been suffering from a severe attack of influenza, but hoping soon to be enabled to afford personal explanations that might be required.

Stockton.—A requisition to James Watts, Esq., a merchant, of Manchester, has been forwarded by a body of Liberal electors, requesting him to become a candidate at the next general election.

Leominster.—The rumour that Mr. Frederick Peel would be a candidate for Bristol at the next election is contradicted on authority: he will seek again for the suffrages of Leominster.

Ipswich.—Mr. Charles Gilpin, a member of the Court of Common Council, is announced as a candidate for Ipswich, by the local papers, at the next election.

The Newport Boroughs.—In case of a vacancy, Mr Lindsay, the merchant and shipowner, of London, is men ioned as a candidate.

West Kent.—A strong contest is expected at the next election. Sir Joseph Hawley, Bart., of Canvening, and Mr J. Wharton, a county magistrate, of Maidstone, will stand on the Liberal interest; and Sir Edward Filmer, one of the present members, and Viscount Holmesdale, probably, on the Conservative side. It is not stated whether Mr. T. Law Hodges intends to retire.

Plymouth.—Mr. G. T. Braine, deputy-chairman of the Eastern Steam Navigation Company and director of the Plymouth Great Western Docks, has issued an address to the electors of this borough, offering himself as a candidate for its representation. He states that he is by education and conviction an advocate of free trade, while in matters of general policy his views are in accordance with those of the Liberal party; that he is warmly attached to the Church of England, and opposed to any concession of spiritual or temporal power to the Church of Rome.

SOULOUQUE AND THE DOMINICANS.

(*Extract of a Letter from Port-au-Prince, Oct. 15, 1851.*)

It may probably prove interesting to you to have an account of the proceedings that have taken place in bringing the Haytian Emperor to a final arrangement. His Imperial Majesty, Soulouque, or Faustin I., is a despot over a Negro reign, very ambitious, and possessing on y about a third of the island of St Domingo; but he is ambitious of possessing the whole island. He has a navy (such ragged fellows!) a squadron of eight ships—two corvettes, two brigs, and four schooners; and as an immense revenue from export and import duties. He, as well as his people, hate the whites, and would exterminate them if they could. Now, the St Domingos, the Spanish portion of the population, wished for a Republic, and are acknowledged as such, not being strong enough to protect themselves against Soulouque (or Faustin I.), and knowing that if they should be conquered by the Blacks, they would, in all probability, be massacred, have appealed to the powerful Governments of Europe and North America for protection. England, France, and America have agreed to their request, and they have proceeded to work to prevent Soulouque from commencing any aggressions on his neighbours. All the persuasions that the Consuls could urge have failed to get a decisive answer from him; and it was determined to go quietly to blockade him, and take possession of his squadron, if he would not give an assurance that he would not molest the other inhabitants. Some three months ago he collected together a large army of some 9000 or 6000 men, infantry and cavalry, and proceeded to the north of the island to Cape Haytien, accompanied by all his squadron. This was ostensibly to lay hold of a rebel, Prince Bobo, who is trying to upset his Government, and was going on well in the north, where the Emperor is not at all popular. But, as Cape Haytien is close to the frontiers, the Consuls stopped on land, when once there, and stopped he would invade Dominica; therefore, as large a squadron of men-of-war as could be collected, by the French (the Americans have no men-of-war on the island at present), was sent to Cape Haytien, which the Emperor's motions, and to be ready to act, and the Consuls intimated formally to the Governor of that city attempting to enter the town, that if he should go down upon them. The *Infernale* and *Devastation* (English, will the *Otaver* and *Milan* (French), have been employed in this service for the last two months. In viewing the Emperor from peace to piece, and actions, they found that many letters have passed between the Consuls and the Minister for Foreign Affairs, but nothing satisfactory has been demanded of the Emperor therefore, as large a squadron of men-of-war as could be collected, by the French (the Americans have no men-of-war on the island at present), was sent to Cape Haytien, which the Emperor's motions, and to be ready to act, and the Consuls intimated formally to the Governor of that city attempting to enter the town, that if he should go down upon them. The *Infernale* and *Devastation* (English, will the *Otaver* and *Milan* (French), have been employed in this service for the last two months. In viewing the Emperor from peace to piece, and actions, they found that many letters have passed between the Consuls and the Minister for Foreign Affairs, but nothing satisfactory has been demanded of the Emperor. Three months ago he collected together a large army of some 9000 or 6000 men, infantry and cavalry, and proceeded to the north of the island to Cape Haytien, accompanied by all his squadron. This was ostensibly to lay hold of a rebel, Prince Bobo, who is trying to upset his Government, and was going on well in the north, where the Emperor is not at all popular. But, as Cape Haytien is close to the frontiers, the Consuls stopped on land, when once there, if he should go down upon them.

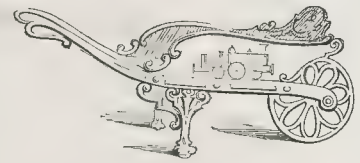
ENGLISH AND FRENCH STEAMERS IN THE HARBOUR OF GONAIVE, HAYTI.—(SEE PRECEDING PAGE.)

RAILROADS IN CANADA.—COMMENCEMENT OF THE ONTARIO, SIMCOE, AND HURON RAILROAD, IN TORONTO.

The inhabitants of the frozen and hitherto imperfectly understood region of Canada have not, until very recently, availed themselves, to the extent which has been within their power, of those estimable advances in the general progress of public improvement which the people of the neighbouring Republic have made. With the boundless resources of a country, the fertility of whose soil is proverbial, and enjoying the succour and support of the mother country, the people of Canada, composed of a mixture of race from all nations, would appear to have been hitherto absorbed in the idea of individual gain in whatever position of life fortune or the force of circumstances might happen to have placed them. Individuality has been the active and paramount feeling, to the exclusion of others and those of a more extended nature, at all times necessary to be cultivated in a new and thriving colony. It is true that clearings in the immense forests of Canada have been made to a great extent; towns and cities have arisen; canals have been dug; and other public works have been commenced, and some completed, at an enormous expense to the colony, without yielding in return an advantage commensurate with the outlay, from the circumstance of their not being adapted to the peculiar wants and requirements of the different sections of the country in which such works have been constructed. At length, however, the spirit of public enterprise appears to have burst forth, and Canada will, no doubt, at an early period, present to the world satisfactory proof that she participates in the feeling of all the nations of Europe, that railroads are indispensably necessary to keep pace with the rapid increase of the commerce, population, intelligence, and wealth of the colony.

The accompanying Engraving is gratifying evidence of this fact. It shows the ceremony on the occasion of turning the first sod of the "Ontario, Simcoe, and Huron Railroad," on the 16th of November last, which line of road is intended to connect Lakes Ontario, Simcoe, and Huron by a direct communication northward from Toronto, now a central point of travel and traffic. The company was incorporated by act of the provincial Parliament, 12 Vic., cap. 199, and received the Royal assent of her Majesty in Council, 29th of August, 1849. Its capital is £500,000; and the length of the projected road is about seventy-five miles, through a most fertile section of the province, abounding with well-cultivated farms of great extent, and wanting only facilities for the cheap and expeditious transport of their immense produce to market.

The ceremony of breaking ground for this road was characterised by a degree of enthusiasm on the part of the public, which, on no other occasion, can be found on the records of the history of Canada. The weather was fortunately fine, and the day was ushered in with the music of bands of surrounding townships, whose societies and public companies had turned out on the occasion, as well as those of the city and the garrison.



RAILWAY WHEELBARROW.

SILVER SPADE.

By previous arrangement made with his Excellency the Governor-General, it was pretty generally understood that his amiable consort, the Countess of Elgin, would honour the company by turning the first sod; and the attendance of elegantly-dressed persons to witness the ceremony was very numerous.

Their Excellencies and suites were escorted from Elmsley House to the ground by a guard of honour, and on their arrival they were received by the directors of the company; the president, the Honourable Henry John Boulton, M.P.P., conducting Lady Elgin to an elegant pavilion erected for her reception. At this moment a Royal salute was fired from the garrison; the band on the ground, the 71st Highland Light Infantry, under the command of Lieut.-Colonel Sir Hugh Dalrymple, playing the National Anthem. The cheering having subsided, the mayor of the city, John G. Bowes, Esq., as the representative of the civic body of Toronto, read to his excellency the address of the directors of the company and the city council, to which his Excellency replied. The silver spade, prepared for the occasion, was then presented to her Ladyship by Major D. P. De Witt, one of the engineers of the company, and the ornamental wheelbarrow was presented by Milton Courtright, Esq., one of the enterprising contractors for making the road. The Countess of Elgin then raised the first sod, and throwing it into the wheelbarrow, it was wheeled a short distance by the Governor-General, and then turned over, amid the most enthusiastic cheers. Shortly after the ceremony, his Excellency and suite took their departure from the ground, and the different societies, forming themselves in the order in which they came, followed soon after to their respective places of assembly. Thus, without the slightest annoyance or interruption, or any casualty of any kind, terminated the celebration of breaking ground of the Ontario, Simcoe, and Huron Railroad, an event of the highest importance to the city of Toronto and Western Canada, and which it is hoped is only the forerunner of many more of a similar character.

COMMENCEMENT OF THE ONTARIO, SIMCOE, AND HURON RAILWAY BY HIS EXCELLENCY THE EARL OF ELGIN.

THE APTERYX,

IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S PARK.

AMONG the recent discoveries in Zoology, there is scarcely a more astonishing fact than the revelation of the ancient bird life in New Zealand, which has been made and recorded in the "Transactions of the Zoological Society," and in some similar works to which Professor Owen and Dr. Mantell have contributed the result of their correspondence with that country. The researches of the first-named eminent physiologist, who, from the view of a single bone, originally conjectured the existence of those gigantic species which he has since described with such felicity, have established the truth that at least ten species of wingless birds now extinct or nearly extinct formerly inhabited the islands of New Zealand in considerable numbers; that they differed essentially from any of the five ostrich-like birds which are now found in America, Africa, Australia, or the Indian Archipelago; that they not only existed within the era of man's appearance on those islands, but that their destruction was of comparatively recent date, if it in truth really is the fact that the whole of the Moas have been exterminated and inhabit the earth no longer.

Allied to, and contemporary with, the Moas, were the birds belonging to the genus *Apteryx*, of which at least three are still found in New Zealand. These birds, generally known under the native name of Kiwi, are entirely nocturnal in their habits, and probably are indebted to that circumstance for the existence which they still maintain in spite of all the dangers which surround it.

For a long time after its first discovery and its early description by Dr. Shaw, the *Apteryx australis* remained a very rare bird in museums; so much so, that, at one time, nothing but the production of the original specimen (which still exists in the museum at Knowsley) would convince some of the foreign *savans* that such an anomalous form actually existed.

As discoveries increased, it became more and more important to scientific men to obtain such illustration of the habits of the apparently extinct birds of New Zealand as comparison with the Kiwi could afford; and various attempts have accordingly been made to bring living specimens to Europe. It was reserved, however, for Capt. Erskine, R.N., of H.M.S. *Havannah*, to succeed in this attempt, and he has now, perhaps, rendered one of the most interesting services to physiology which can be imagined, by bringing the first living specimen of this rare and most singular bird, this link, as it were, between the present and the dim past of a great Polynesian creation of which New Zealand was the last abiding-place.

The habits of the *Apteryx* are, as we have said, strictly nocturnal. During the day the bird stands or sits sleeping and motionless; as twilight comes on his energies revive, and during the whole night, apparently, he searches actively for food, and travels rapidly from place to place in a singular shambling but not unrapid gait. When by chance the bird is compelled to change his attitude from the perpendicular to an oblique direction, he appears to be constrained to support himself by the beak in addition to his feet. This organ, which is not less singularly constituted than the other parts of his structure, is peculiarly adapted to serve this purpose, by its hard and bony texture towards the point. Imperfect vision during day is compensated for by an extraordinary development of the olfactory nerves, and the apparently anomalous position of the nostrils, which are perforated at the very end of the beak. As the *Apteryx* plunges deeply into the loose earth in search of food, its powers of perception must be vastly increased by this disposition of so important an organ; and it is not difficult to understand how effectively he must clear every place which the bird inhabits. Its most favourite food since its arrival in this country is earthworms, of which it devours a considerable number nightly. A writer in the *Literary Gazette* has compared the first aspect of this bird to that of a quadruped. The texture of the feathers, the colour, and the crouching attitude in which it habitually reposes, certainly remind one of a hedgehog. Its means of defence appear to be its sharp claws, which it uses with freedom and activity, kicking in the fashion of a cassowary.

The liberality and zeal of Lieut.-Governor Eyre led him to procure and to transmit to the Society, in the care of Captain Erskine, this rare addition to the rich collection which the Zoological Society have with such laudable perseverance now pushed to a height which seems to render nothing impossible to them. The long list of donations from other sources which figure in a Report now before us gives most gratifying evidence of the rapidly increasing desire to support this popular institution; and we cannot but applaud the enlightened and liberal conduct of gentlemen in the position of Lieut.-Governor Eyre and Captain Erskine, who use the advantages at their command in distant regions for the promotion of knowledge among their countrymen at home. There is no spot on the earth's surface, of the same extent, which affords more interesting subject for zoological inquiry than the islands of New Zealand; and it is now to be hoped that the success which has attended this attempt to present to Europeans one of the wingless types so characteristic of the Fauna of that region, will induce Mr. Eyre and other eminent friends of science there to continue their efforts until we have had equal opportunities of studying the whole of them.

APTERYX IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

ARCTIC EXPEDITION.

Of the perils and providential deliverances witnessed by "those who occupy their business" in the waters of the Icy Regions, Dr. Scoresby and others have given many vivid and truly heart-stirring descriptions; but we question whether any instance of more frightful peril, or more merciful and providential deliverance, is upon record than that which recently, in the late Arctic expedition, happened to H. M. S. *Intrepid*, Lieut. J. B. Cator, R.N., lately promoted to the rank of Commander. The ship was forced upon an iceberg, where she was held for twenty hours, on and off, in a state of anxious suspense, which can be more easily conceived than described. The Commander of H. M. S. *Pioneer*, Lieut. Osborne, with the Commodore on board, watched her for eight hours, without being able to render her the least assistance, and, as we have been informed, the latter has publicly stated, that, "if he had been within reach, he should have ordered her commander to abandon the ship for the sake of the ship's company," so hopeless seemed the possibility of her escape.

Commander J. B. Cator, not many days after passing his examination

H. M. ARCTIC STEAM-VESSEL "INTREPID" DRIVEN FORTY FEET UP AN ICEBERG, IN BAFFIN'S BAY.

for mate in Macao Roads, there being no other mate on board, commander of the H. M. S *Herald*'s boats in the Canton River in 1841, for which service he was promoted to the rank of Lieutenant. He was First Lieutenant of H. M. S. *Britannia* in 1847, when that vessel triumphantly towed off the *Great Britain* steam-ship from the strand in Dundrum Bay, and obtained great credit for the admirable arrangements made in that extraordinary undertaking, which was completed without loss of life or limb. To his courage when Lieut.-Commander of H. M. S. *Avon*, and to his personal exertions in extinguishing the fire in a barque which threatened destruction to every vessel, 32 magistrates, in a memorial to the Lords Commissioners of the Admiralty, ascribed the saving of all the shipping in Limerick harbour. His own description of the awful position of H. M. S. *Intrepid*, under his command, to a relative, with which we have been favoured, together with the two Sketches of the vessel in her perilous position, bespeaks self-possession so truly characteristic of the gallant officers and seamen of the British navy, and so highly creditable to himself, that we are persuaded our readers will be more gratified with the perusal of his own simple narrative than with any further comments. The two Sketches will illustrate it.

I the position of H M S *Intrepid* on the iceberg, under pressure of the floes of ice.

2 The position of H. M. S. *Intrepid*, supported on the iceberg by wedges of ice, which kept her as it were in stocks, from falling over on her side.

H. M. Steam-vessel *Intrepid*, at sea, Sept., 1851.

My dear ——, As you are always anxious to hear of me, I send you an account of [illegible] my ship on the 27th and 28th August last, and of our [illegible] providential deliverance.

[illegible] ng of the 27th August, notconsidering my vessel in a safe position, at 11 20. A.M. I got a stern warp out and have her port broadside to the floe, and [illegible] ran astern berg; about a cable's length of a mile distant, hoping that as there was water on the south-west side of it, in case the floe should break away, I should be enabled by the help of steam to get clear without damage (wind S.S.)

A little after 5 P.M., the stern anchor drew, the ship swinging head to wind. At the same time large pieces of the floe, having broken off, left me in a slight closing on my portbeam, which, added to a rotten floe, prevented my hauling her broadside again. To it I tried to do, but without success. At 6 P.M. I observed the floe to be in motion, and ordered steam to be got up with all speed. It no sooner began to move rapidly towards the berg, and seeing in a moment our steam could not be got up in time to be of use, as our only chance I hauled her starboard broadside to the floe, which would carry her with it clear of the east end of the berg; for I felt sure that were she driven in contact with it no human exertions could save her from becoming a total wreck. My feelings may be better imagined than I can possibly express them, when I found the floe split to the westward of us, and that it was driving against the berg with fearful speed.

The position of H. M. S. *Intrepid*, supported on the iceberg by wedges of ice.

I now looked on her destruction as certain; but as we [illegible] were I saw her rise to the heavy pressure. At 6.30 P.M. it struck her on the starboard quarter, but only to her channels. I took advantage of this respite to get my two whale-boats and dingy on the floe, when, from seven to nine P.M., the pressure again came on with unabated violence, forcing her taffrail 40 feet below the level of the floe on the side of the berg. The masts of course were now running near ten feet above the bulwark, many pieces of which we prevented from falling on board with carpets, &c. Sometimes when on the point of being worn, or tumbling in on our decks, the floe would again sink, thereby relieving us from great pressure. The berg elevated at this time a little to me to windward, and the pressure soon after ceased. To piled-up masses it then sat [illegible] sloping, leaving the ship suspended on the side of the berg, with two small wedges pieces, one at the outer side of the outer starboard, and the other at her bow, being the only support to keep her stationary and upright in that dangerous position. Fearing she would fall over on her broadside (her starboard, or off side), as she had listed over, I had the hatchways battened down fore and aft. I now got over her bows, and walked under her bottom to the screw sternpost, and, as far as the eye could detect, she had received not so much as a rub, although the pressure sustained made the timbers and [illegible] quietly fore and aft. I had provisions got up, ready to pass to the boats on the [illegible] occasion opportunity offered. At 10 P.M. the pressure again came on [illegible] piling up around us. At 11 to 12 P.M. the floe was shot clear. At 2 A.M., August 28th, the floe split to the southward of us, and [illegible] stood off [illegible] S.E., and then the pressure ceased on us, and I [illegible] moving [illegible] rolling up about two cables' length to the [illegible] A.M. the floe split in several places, allowing a rush of water for a moment close to the vessel, which again swept away what had supported her, except a few small pieces of detached masses of ice not before landed to. I now felt sure, and I think all on board with me, that the vessel must fall over on her broadside. At 9.30 A.M. the props gave way, and she went, to our joy, [illegible] almost instantaneously, from the enormous pressure without sustaining the slightest damage. I was now in hopes I should have been enabled to get her round the north end of the berg, but at a quarter to 10 A.M. another very heavy pressure came on, forcing the ship a second time up the berg, and within a foot or two of her former position. At 10 A.M. the ice became stationary. One whale-boat and the dingy were crushed to atoms, &c.; but as it was through spar by the last floe, the ice coming overboard before the men could get to their rescue. I now had the preserved meats passed on to the floe. Soon after, "water" having been reported to me under the lee of the berg, and having observed the *Pioneer* steam past it to the northward, I was in hopes she might be there. I therefore sent two men to the top of it to see where she was. On their return they reported her being four or five miles to the northward. They were hardly on board, and the provisions scarcely out of the ship, before the floe began to split in several places, drifting the men and [illegible] them doing their utmost to keep in sight of the vessel, but to no purpose, the floe driving north too fast for them; they launched the boat and tried to pull up, but were obliged to give up and put her on the floe again.

I now got the pinnace, my only remaining boat, ready for launching over the gunwale, and this I felt to be a most [illegible] mockery, for, had the vessel fallen over, of which she was in danger a second time, the boat would have shared the same fate as the other two, in a moment. The berg would have been then our only chance. Overcome, and that with fervent hope, at this [illegible] I [illegible] that I am sure many of us would have lost our lives in attempting to get on to it, and, in all probability, those who had been happy enough to have gained it, would have been frozen to death before assistance could possibly have been rendered them. "The temperature stood on board at 32°; the one degree above freezing point; it was also blowing hard at the time from S.E. On the berg the temperature would have been much lower, and the heavy [illegible] was too steep for any one to move about upon in order to keep their blood in circulation." About 3 before 1 P.M., the ship again slipped off the berg, and went a little ahead. I was again in hopes I should have been able to get her round the north end of the berg; but at 1 P.M. a heavy floe, 5 feet thick, came down on us at the rate of three miles an hour, forcing the vessel against the berg, for the third time, with great violence, making her under-part and ground to most frightful extent, carrying away her rudder and screw-framing. This I consider to have been the worst pressure of any, as it listed her over seven degrees by the pendulum" from the berg. I feared the last would have run on board, and so have overwhelmed her, but fortunately she rose to it. Had I not suspended the vessel could have believed it possible that any vessel could have withstood such tremendous pressure. At 2 P.M. again it came on gently as the pressure had commenced, it was of off, and the ship floated once more. I ordered the jib to be hoisted, and she rounded in safety the north end of the berg. "On rounding the berg, the *Pioneer* came right ahead, [illegible] from [illegible] [illegible] [illegible]

it, to form and to lead a more powerful party than is at present to be found in the House of Commons. Whether he will do so, remains to be seen. But a question more immediately important is, whether any change in the foreign policy of the Government will result in consequence of this secession; and whether Lord Granville, the young, rising, and very able statesman, who has accepted the arduous post of Foreign Secretary (rendered doubly arduous by the fame of his great predecessor)—will follow in his footsteps, and carry out his policy, with as much vigour, and with more discretion; or whether an alliance with absolutism is to be the new policy of the Whigs. These questions must for the present remain unanswered, and we must await the meeting of Parliament for more precise information. The Ministry is said to be fully conscious of the loss which it has experienced, and as fully aware of the necessity of strengthening itself by the infusion of new and tried men into its ranks. By the promotion of Lord Granville it gains nothing; for his Lordship was already in office, and gave it all the support which his popular name and admitted talents could bestow. This fact renders it all the more probable that some further changes will be made; and that, in spite of family connexion, it will be deemed prudent to have a Chancellor of the Exchequer whose name shall not be the most blundering inefficiency, and a Colonial Secretary who shall not impede the pacification of Kaffraria, and be a stumbling-block which none of our colonies can get over.

THE "ILLUSTRATED LONDON NEWS," ITS SUPPLEMENTS AND DOUBLE NUMBERS.

THE busiest year in the annals of newspaper history approaches to its close; and we take advantage of the opportunity to say a few words, not in self-laudation, but in explanation of the course that we have been compelled to adopt to keep our readers and subscribers *en courant* of the interesting events which have marked its progress. The Great Exhibition of the Arts and Industry of all Nations called upon the conductors of all the public journals of the metropolis to make extraordinary exertions to spread through the land the record of the marvels contained in the Palace of Industry. If it called upon those newspapers to bestir themselves which merely report and describe events by the ordinary language of words, it still more urgently called upon such a journal as the ILLUSTRATED LONDON NEWS, which a contemporary has called "the wonder of the 19th century," to produce not merely a record in language, but in "pictures," of the treasures of art which were congregated together in Hyde Park, and to perpetuate, for the instruction of distant readers and of posterity, in a manner more thoroughly and effectively than any non-illustrated periodical, however able, might hope to do, the triumphs of art and manufacture effected by the various nations who contributed to the display. It has been universally admitted, that, high as were the expectations which were formed of the powers and resources of this Journal to illustrate the Exhibition in a worthy manner, we not simply equalled, but surpassed, them. The long series of Exhibition Supplements, though we were of necessity obliged to charge our subscribers double price for them, were, we may state, so well received by the public, notwithstanding the extra charge of sixpence, that a large increase in the number of our subscribers commenced with the first week in May, and has progressively continued from week to week up to the present time. Our circulation now exceeds by several thousands (we need not say by how many scores, as those who desire more precise information may procure it at the Stamp Office) the numbers which we issued prior to that period. For this appreciation of our efforts we are deeply grateful, and shall do our utmost, at all times, to maintain the high position we have attained, and to increase the beauty, the interest, and the permanent usefulness of our Journal. We shall spare neither cost nor labour to make it worthy of the unprecedented favour which it has gained, and, we trust we may say without vanity, which it has deserved. We shall never incur the labour and expense of producing a Double Number without being previously satisfied that the public expects it of us, and that the importance of the events to be illustrated demands it; but we have already made arrangements to present gratis, during the year 1852, to all old subscribers, and to subscribers commencing at the conclusion of the present Volume, a series of twenty Half-sheet Supplements, illustrated in the highest style of which the art of wood engraving is susceptible, and embracing the general subjects of Literature, Art, Music, &c., which, in consequence of the small space at our command in our ordinary Number, we might otherwise be compelled to pass over. When we state that, inclusive of the stamp, the cost to us of a single gratuitous Half-sheet Supplement is upwards of £600, our readers may form some estimate of the expense which we thus voluntarily incur to merit their favour and to increase our own usefulness at the same time; and, bearing this in mind, they will not, we trust, consider, upon the comparatively rare occasion when we issue a Double Number, that we tax them unduly. The Musical Supplement alone, which we issue at the charge of Sixpence, could not be offered by any other agency than our own at less than five times the money. We only mention these facts *en famille*, as it were—though it must be confessed our "family" is a rather numerous one—and, as we said before, not in laudation of ourselves, but simply in explanation, and that of old, as well as new, friends may know the arrangements we have made.

RESIGNATION OF THE OFFICE OF FOREIGN SECRETARY BY LORD PALMERSTON, AND APPOINTMENT OF EARL GRANVILLE.

The following announcements of Ministerial changes were made in the *Times* and *Globe* of Wednesday last:—

A few days ago, after the departure of all the Ministers from London, and at the near approach of Christmas, a Cabinet Council was unexpectedly summoned, although no assignable cause of public interest had occurred to explain this sudden requisition. This Cabinet was held on Monday, the 22nd inst., and it was remarked with surprise that Lord Palmerston, one of the most assiduous members of the Government, was not present. From these circumstances suspicion was excited, and rumour became rife. We now have it in our power to remove all further uncertainty on the subject, for we are enabled to announce, that from the day on which that Cabinet was held Viscount Palmerston ceased to hold the office of Secretary of State for Foreign Affairs, or to be a member of her Majesty's Government.

We are enabled to announce that Lord Granville has been appointed Lord Palmerston's successor. The eviden e of statesmanlike abilities and attainments which have been afforded by all the noble Lord's recent speeches are abundantly sufficient to justify his promotion to a more elevated position of public trust.—*Globe.*

THE NEW FOREIGN MINISTER.—Granville George Leveson-Gower, second Earl Granville, and now her Majesty's Secretary of State for Foreign Affairs, is a comparatively young man, having been born in 1815. He graduated at Christ Church, Oxford; was for a short time *attaché* to the British Embassy in Paris, and subsequently Under-Secretary of State for Foreign Affairs; he was appointed a railway commissioner in 1846, in which year he succeeded to the Earldom; Master of the Queen's Buckhounds, July, 1848; Vice-President of the Board of Trade, May, 1848; was M P for Morpeth, from February, 1837, to February, 1840; and sat for Lichfield, from September, 1841, to January, 1846; was appointed a Deputy-Lieutenant of Salop, 1846; Second Major, Staffordshire Yeomanry, 1848. Earl Granville was, it must be remembered, chairman of the council of the Royal Commission of the Great Exhibition of 1851. The first Earl was a distinguished diplomatist; he was uncle to the second Duke of Sutherland, and was long known as Lord Granville Leveson-Gower.

DIPLOMATIC CHANGES.—We have reason to believe that the Marquis [illegible] and that Sir H. Bulwer is likely to repla[illegible] arrive in England at [illegible] French Republic. In the place of Count Walewski, who is about to return to France.—*Herald* of Wednesday.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert, with the Prince of Wales, the Princess Royal, and the younger members of the Royal family, left Osborne on Saturday last, upon their return to Windsor Castle for the Christmas holidays.

The Royal party left Osborne at half-past ten, and, crossing the Solent in the *Fairy*, Royal steam-tender, took the railway at Gosport, proceeding thence by special train to Windsor.

On Sunday the Queen and the Prince Consort walked in the slopes, and afterwards attended divine service in the private chapel of the Castle.

On Tuesday her Royal Highness the Duchess of Kent dined with her Majesty and the Prince consort. General Sir Julius Hartmann, Lieut.-Colonel Muller, and Captain Grundell had also the honour of joining the Royal dinner party.

On Wednesday his Royal Highness Prince Albert enjoyed the sport of pheasant shooting in the Royal preserves.

The Marquis of Ormonde and Lieut.-Colonel the Hon. N. Hood have succeeded Lord Waterpark and General Sir F. Stovin as Lord and Groom in Waiting to her Majesty.

We believe the honour of having her Majesty within the princely halls of Dunrobin may be looked for next year. Active preparations are going on with the view of putting the grounds and new outbuildings in a tasteful condition, and a number of masons are in constant employment.—*Inverness Courier.*

DISTRIBUTION OF HER MAJESTY'S CHRISMAS BOUNTY TO THE AGED POOR.—On Monday her Majesty's Christmas bounty was distributed at the Royal Almonry-office, Middle Scotland-yard, by the almoners and sub-almoners, to 400 men and women above sixty years of age, each of whom received 5s., the money being paid in two new half-crowns, issued for the purpose from the Mint. The average age of the recipients was 82, 50 of the number being upwards of 90 years of age, and three centenarians

Lord John Russell arrived in town on Wednesday morning from the seat of the Duke of Bedford, Woburn Abbey, Bedfordshire. His Excellency the Russian Minister had an interview with his Lordship at his official residence in Downing-street. In the afternoon Lord and Lady John Russell left town for Pembroke-lodge, Richmond Park.

Yesterday (Friday) her Majesty held a Privy Council at Windsor Castle for which the summonses had been issued on Wednesday to the Ministers and officers of state. At this Privy Council the seals of the office of Secretary of State for Foreign Affairs were delivered to the Earl of Granville, who replaces Lord Palmerston in that department of the Government.

The Duke of Wellington has left Apsley House for Strathfieldsaye for the holidays.

The Duke and Duchess of Sutherland and the Lady Constance Leveson-Gower have arrived at Trentham Hall, from the Earl of Carlisle's, Castle Howard. The Marquis and Marchioness of Stafford have arrived on a visit to their noble relatives, from Lilleshall.

The Duke and Duchess of Beaufort and Lady Henrietta Somerset returned to Badminton Park on Wednesday, from visiting the Marquis and Marchioness of Ailesbury at Tottenham Park. The noble Duke and Duchess will entertain a numerous family circle at his Grace's hospitable seat during the holidays.

The Marquis and Marchioness of Anglesey will entertain a large party at Beaudesert during the holidays.

The Marquis and Marchioness of Ailesbury have been receiving a succession of visitors at Tottenham Park. Among the company assembled were the Duke of Cambridge, the Duke and Duchess of Beaufort and the Ladies Henrietta and Geraldine Somerset, Viscount and Viscountess Castlereagh, the Earl and Countess of Shelburne, the Earl and Countess of Glengall, the Earl of Carnarvon, Viscount and Viscountess Sydney, Mr. Bentinck, Mr. Henry Baring, Mr. Henry Percy, the Earl of Cardigan, the Countess Flahault and Mlle. de Flahaut, Hon. Nina Blake, &c.

Lord John Russell proceeded from Windsor Castle, on Monday evening, to his residence, Pembroke Lodge, Richmond Park. His Lordship returned to town on Tuesday morning. His Excellency the French Ambassador had an interview with the noble Lord at his official residence in Downing-street. His Lordship left town in the afternoon on a visit to the Duke of Bedford, at his seat, Woburn Abbey, Bedfordshire. Lord Lansdowne left town on Monday night for his seat, Bowood Park, Wiltshire:

PRIVATE THEATRICALS.—On the 18th inst. Sir Percy and Lady Shelley opened their pretty little private theatre, in the new Christ-church, to the surrounding nobility and gentry. The pieces represented were, "The Gentleman over the Way," a translation from the French, by Sir Percy Shelley; and an extravaganza, entitled "A Castle in the Air, King of Sardes," constructed from the combined pens of the Hon. Gramfylly Berkeley and Sir Percy Shelley. The Hon. Gramfylly Berkeley, M.P., Sir Percy and Lady Shelley, Miss Reynardson, Miss Mary Reynardson, and Capt. W. Wingfield, were the principal performers. The pieces went off with the greatest possible *éclat*, and, after the performance, the guests were entertained at supper. Among the company present were the Earl and Countess of Malmesbury, the Hon. Mr. and Mrs. Berkeley, the Hon. and Mrs. Frank Berkeley, Lord and Lady Walter Kerr, Admiral and Mrs Topham, Colonel and Mrs. Craycroft, Major York, &c. The theatre is to be again thrown open, with a series of performances. The scenes of the scenery, machinery, and decorations was painted and arranged by Sir Percy Shelley.

Mr. G. F. Young, we are sorry to say, has been very seriously indisposed. After the labour and fatigue of the public dinner given to him by the Protectionists visiting London on the occasion of the cattle show, the hon. member for Scarborough sought repose at Hastings, and on Sunday, the 14th inst., was there seized with paralysis. The last accounts state that he is much better, and will soon be able to attend to business.

His Excellency the French Ambassador, the Count Walewski, has taken the mansion of the Hon. Captain Arthur Duncombe, M.P., in Grosvenor-square, where the *Chancellerie* has been removed from Lord Burrington's, in Belgrave-square.

The Duke and Duchess of Norfolk will entertain a numerous family circle at Arundel Castle during the recess. Lord and Lady Foley and Lord and Lady Edward Pitzalan Howard have left town en route to their Graces.

There has been a succession of hospitable gaieties during the last few days at Stoneleigh Abbey, in commemoration of the christening of the heir to the title and estates of the barony of Leigh. The ceremony took place at the parish church of Ashow, and was attended by the Duchess of Northumberland, the Marchioness of Westminster, the Earl and Countess of Macclesfield, Lord and Lady Guernsey, Lord Says and Sele, the Ladies Octavia and Agnes Grosvenor, the Hon. Mrs. and Mr. C. B Adderley, M.P., the Hon. R. B. Leigh and Lady Elizabeth Lawley, the Hon and Rev. C. and Mrs. Twisleton, &c. The heir received the baptismal designation of "Gilbert Henry Chandos." His sponsors were the Duke of Westminster, the Hon. E. Chandos Leigh, and the Hon. Mrs. Adderley. At the end of the baptismal ceremony a breakfast was spread at the Abbey, and in the evening a dinner was provided. On the following day Lord Leigh entertained his numerous Gloucestershire and Warwickshire tenantry to dinner at the Abbey, in true baronial style. In the evening there was a display of fireworks in the park. On the succeeding afternoon the children of the parochial schools at Westwood Heath, Ashow, Stoneleigh, and Stonleigh were regaled in the riding-school, and subsequently the poor of the same parishes.

THE ROYAL BARON OF BEEF.—This noble old English joint was brought into the Royal kitchen at Windsor Castle on Tuesday. The process of roasting commenced at eleven o'clock on the morning of that day, and was not completed before eleven o'clock at night. The baron, which was cut from a handsome Devon ox, weighed 430 lb., and was placed cold on a side table at the Royal banquet on Christmas-day.

NATIONAL SPORTS.

Horses, as well as riders, will have a leisure time of it in all that relates to steeple-chasing, the only fixture between the present time and the middle of January being the Brentwood on Tuesday next; it does not promise anything very imposing, either in the character or the quantity of sport. The only coursing appointments next week are the Great Smeaton (Yorkshire), commencing on Tuesday, and the Aston (Nantwich) on Thursday.

TATTERSALL'S.

MONDAY.—Some liberal investments on the 2nd Chester Cup, and an immense improvement in Derby betting for the Metropolitan, were the most, in fact the sole, features of the betting this afternoon. Market prices at the close

FINE ARTS AT MANCHESTER.—We are happy to learn that Mr. E. M. Ward's picture of Louis XVI. in prison has obtained not only the hundred guinea prize offered this year by the Manchester Institution of the Fine Arts, but also the Heywood gold medal, and accompanying money prize, in the same city. We gave an Engraving of Mr. Ward's picture in the ILLUSTRATED LONDON NEWS last exhibition season.

From the last report of the Commissioners of Woods and Forests, just [illegible] appears that the new Record Repository, now being built in Rolls-[illegible]-house, will cost £40 000. It will contain 321,600 [illegible] of [illegible] 1234.3 t. cubic feet will be required for records, and the rem[illegible] for air, &c. It is expected that there will be room for more records than there are, at present.

LAW INTELLIGENCE.

THE GOLD-DUST ROBBERY.—In the Court of Exchequer, on the 20th inst., before the Lord Chief Baron and a special jury, the action of the firm of Rotlischild against the Royal Mail Steam-Packet Company, to recover £[illegible] the value of the gold dust stolen on the South-western Railway, was tried. The Attorney-General, Mr. Bramwell, and Mr. Wills appeared for the plaintiffs; and Sir F. Thesiger, Mr. Crowder, Mr. Greenwood, and Mr. Bovill were counsel for the defendants. The latter contracted to deliver in London a number of boxes of gold dust, at the freight of 1½ per cent, from Panama: out of 263 boxes, 11 belonged to the plaintiffs. The boxes arrived safely at Southampton, but at Winchester it was supposed that three boxes were stolen. The discovery of the robbery took place at Nine Elms: and one man at Winchester, and another man (who has since committed suicide) at the Central Criminal Court, were convicted of participating in the robbery. A variety of legal points having been reserved for the Court above, the Lord Chief Baron (whose summing up was favourable to the defendants) left the simple question to the jury, whether there had been negligence on the part of the defendants; and the jury returned a verdict for the plaintiffs, stating that, in their opinion, the defendants had been guilty of negligence. The verdict was therefore entered for the plaintiffs, subject to the points reserved, based on the bill of lading, in which losses by robbery and dangers of the road, both in England and America, were especially excepted therein.

In the case of Dr. Granville, adjudicated a bankrupt, as a boarding and lodging house-keeper, before the Court of Bankruptcy, on the 30th, an immediate certificate of the second class was granted, his Honor considering that, although he had acted unwisely in speculating as a farmer, as an importer of seltzer water, and on a Thames River Improvement Company, his expenditure as a physician had been kept within his income, and his accounts were clear and explicit.

The Lord Chancellor and the Lords Justices sat together for the first time, on Saturday, in the Court of Chancery, to decide on the interpretation of certain sections in the Bankrupt Law, arising out of a decision of Mr. Commissioner Evans, who refused protection to a bankrupt named Stanton, a watchmaker and jeweller in Buckingham, because he would not produce a certain cash and stock book. Twice had this matter been argued before the Court of Appeal, and finally it was submitted to the settlement of the congregated power of the appellate jurisdiction. Mr. C. P. Cooper and Mr. Simpson, for the bankrupt, contended that the Commissioner could not refuse protection except in cases provided for in the 256th section; or, admitting that such protest were refused, it could form no ground for granting a judgment or decree enabling the assignees to arrest the bankrupt. Mr. J. Russell and Mr. Simpson, for the assignees, maintained that the provisions of the act as to the offences of bankrupts bore out the Commissioner in his interpretation thereof. The Lord Chancellor and the Lords Justices Cranworth gave judgment entirely confirmatory of the view taken of the act by Mr. Commissioner Evans; but the Lord Justice Knight Bruce expressed his dissent, remarking upon the great severity, hardship, and consequently inexpediency of a provision which crushed almost every section of the act of Parliament which had been brought under their attention. The application to dis harge the bankrupt from the confinement in which he is placed, by the creditors taking him in execution on the Commissioner's certificate, is therefore refused.

The *Law Times* suggests a remedy against the plunder of poor persons, on the part of the harpies who frequent the law courts, by requiring that in all cases of defence the bill of costs shall be delivered to and taxed by the officer of the court, by the clerk of the arraigns at the assizes, by the clerk of the peace at quarter sessions, and by the clerk to the magistrates before justices. Such a provision should be made compulsory by law, so that the taxed account should be given to the prisoner to assure him and his friends that he has been fairly dealt with.

RINGING OF BELLS AT CLAPHAM.—Vice-Chancellor Kindersley, on Tuesday, delivered judgment in the case of Soltau v De Held, granting an injunction to restrain the defendant, and all persons acting under his direction, or by his authority, from tolling or ringing the bells, or any of them, in the edifice occupied by the Redemptorist Fathers, so as to occasion any nuisance, disturbance, and annoyance to the plaintiff and his family, occupying the adjoining dwelling-house, situate in Park-road, Clapham. This long-litigated cause has been frequent y before the Courts of Law and Equity. In 1847 Mr. Soltan purchased one of two dwelling-houses, forming originally Lord Teignmouth's mansion-house, with pleasure grounds. In July, 1848, the adjoining house to that occupied by Mr. Soltan, was bought by a religious order of the Roman Catholic faith, called the "Redemptoris. Fathe.s." The appropriated the ground floor for worship, and appointed the Rev. Frederick De Held as priest; the house was then called "St. Mary's Catholic Chapel," and in August, 1848, the bell was put up. Some petitions in authority, caused a belry to be erected. The bell was rolled and rung for five days in the week, five times every day; it was rung six times on Saturday, and on Sunday the ringing began as early as six o'clock in the morning. In the annoyance of the plaintiff and his family. Mr. Soltan wrote to the superiors complaining of the nuisance, but received no answer. In November, 1848, the Redemptorist Fathers registered their house, under the provisions of the 31 George 3, as a Roman Catholic place of worship. Upon, as the bell-ringing continued, the plaintiff and his neighbours wrote to Dr. Wiseman, and had an interview with the cardinal's solicitor, who stated that the bells were only rung for public purposes, but stated that the belfry bell should not ring at six instead of five o'clock. No other concession was made. In May last a church capable of holding 400 persons was erected on the ground attached to the premises of the Redemptorist Fathers, and a steeple or tower 60 to the north-west of their house, in which the church was called "Our Immaculate Lady of Victories," and the bell-ringing became more frequent than ever; so loud was the peal that the plaintiff and his family could neither rest or read. Soltan swore on his own behalf, and he brought an action against the defendant in the Court of Exchequer, which was tried on the 13th of last August, and obtained 40s. damages and costs. Shortly after the action had been commenced, the bell detached to the chapel, was removed from the roof to one of the sides; but from the 13th of August to the 9th of November neither the bells of the church nor of the chapel were rung, but on the Sunday, the 9th of November, the bell-ringing was resumed, beginning at a quarter before nine A.M., for six minutes; at twenty minutes past ten, A.M., for the same time; three bells at a quarter before seven, for the like space of time; one bell at half-past six P.M., for ten minutes, and three bells at ten minutes to seven P.M., for ten minutes; and since that date the bells had rung on Sundays regularly at these hours The defendant insinuated that he should order the six bells to be rung each on week days; their weight was 28 cwt. 2 qrs. 14 lb., the largest bell being 2 cwt. and their size in diameter amounted to 3 feet each The plaintiff's bedroom was within 20 yards of the bells of the chapel and church, and he had been compelled to remove a daughter, who was in a delicate state of health, to a more quiet residence. If he were compelled to leave through the nuisance, it would be at a great pecuniary sacrifice. The Vice-Chancellor, in referring to the legal point of the case, stated that in his view it was quite immaterial whether the bell rinying were a public nuisance or not. To the plaintiff it might be an intolerable nuisance, but to persons at a distance it might produce the most pleasurable sensations. Poets of all ages had written of the delight of listening to village bells, on some fine summer's evening, at a distance. It was the plaintiff who was the sufferer, and not the public generally; and it did not follow because a thing was a nuisance to several individuals that it was a public nuisance. The remedy was by indictment at law, and by information of the Attorney-General in equity, and so, in case of a private nuisance, the remedy was by action at law or bill in equity. The plaintiff had established the right at law to prevent the nuisance of which he complained. His Honor did not go on the legality or illegality of ringing bells. The plaintiff did not come to the nuisance, it came to him after a residence of 30 years in his house, with 21 years more of his lease unexpired. The distance of the tower in the shape of rent was an important indication of the fact of nuisance. His Honor's opinion was that the extent of bell-ringing was an invasion of the comfort of a man's home, and the plaintiff was entitled to the injunction. The church that had been erected was not in the eye of the law a church; it was no more so than the chapel or meeting-house of any denomination of Protestant dissenters. A church in law is that building of which there is but one in the parish, or but one in the parochial district, where the parish is divided by act of Parliament, each building being vested in the person of the parish, of whom there are churchwardens. Consecrated churches are appointed by law, the churchwardens having the custody of the belfry. Unless in special cases of churches founded by the Crown or by act of Parliament, parish churches are under the jurisdiction of the Bishop of the diocese. The edifice of the Fathers at Clapham was not under the jurisdiction of the Bishop of Winchester, in whose diocese Clapham is situate. It is but a chapel, it is no church; it has no privileges, and the privileges of a church in the same way that a parish church has the privileges of having bells or ringing bells. He would not intimate that it was unlawful for Roman Catholics to have bells attached to their places of worship—he did not avoided and would avoid that question; but it must not be assumed that the building stood on the footing of a parish church. His Honor concluded a long and elaborate judgment by stating that the plaintiff had diligently asserted his right from the beginning, and was entitled to the injunction, though not precisely in the terms he had asked.

PATENT LAW REFORM.—A public meeting of the National Patent Law Amendment Society took place on Tuesday, at the Hope Savings Hotel, London-hall, G. Shepherd, Esq., in the chair. Several speeches were made in support of patent law reform; and the honorary secretary announced that many addesions had been received since the last meeting It is resolved to apply to Parliament in the next session, Mr. Campton suggesting that, in order to obtain the concurrence of the Government, the association ought to press for the adoption of a modified form of the plan proposed by the Government committee on the Privy Seal and Signet Offices in 1849.

It appears, from the report of the Commissioners of Woods and Forests just print d, that on the 31st of March last there were 1013 men employed on the new Houses of Parliament—742 upon the works and 271 upon the workshops and on the Thames bank, and 103 at the other establishments.

Amongst the items of expenditure, as sanctioned by votes of Parliament, by the Woods and Forests, are—Public buildings and Royal palaces, [illegible] Ordnance office, Pall-mall, £[illegible] 60; Bank of England, £[illegible] 1 [illegible] Parliament, £[illegible] 3 4s. 10d.; new Houses of Parliament, £1,342 5s 9d.; Nelson Monument, £1,253 1s. 10d.; new Houses of Parliament, £1,342 5s 9d.; Nelson Monument, £1,253 1s. 10d.; Ambassador's house at Constantinople, £7814 14s. 7d.; Windsor Town improvements, £[illegible] 761 9s. 9d.; new Forest drainage, £1118 2s. 2d. The account is up to the 31st of March, 1851.

DRURY LANE.—SCENE FROM THE PANTOMIME OF "HARLEQUIN HOGARTH; OR, THE TWO LONDON 'PRENTICES."

SURREY.—SCENE FROM THE PANTOMIME OF "THE KING OF THE GOLDEN SEAS; OR, HARLEQUIN BLUE-CAP AND THE THREE KINGDOMS."

CHRISTMAS PANTOMIMES AND ENTERTAINMENTS.

THE Lord Chamberlain this year has placed some restrictions on the Pantomimes, and required the comic portions to be submitted to official investigation, as well as the introductory dialogue. The difficulties of this regulation, however, have been surmounted, and this class of pieces is still as amusing and the ever, have been surmounted, and this class of pieces is still as amusing and the present year more expensively got up than ever. Owing to Boxing-night being on Friday, our Illustrations are from full rehearsals; but we have full confidence that they will be found to be strictly correct.

DRURY LANE.

Boxing-night presents this establishment under an entirely new phase—a re-decorated theatre and a vigorous management. The fronts of the boxes, ceiling, proscenium, and cornices show wreath in the style of Louis XVI., with blue and white and gold, panels, intersections, compartments, draperies, frings, and elaborate designs, which, particularly on the ceiling, have a splendid effect. The latter is painted in relief, with classical arrangement of coves and shields, alternating with vases of flowers, these being surmounted by a cornice and basin-trade, with panels supporting figures in a recumbent position. The centre of the ceiling is filled in with a blended ground representing the sky, and with garlands of flowers surrounding the chandelier, which is a new one, manufactured by Pellatt and Co. A complete gas apparatus has been laid down throughout the theatre. Her Majesty's box, also, deserves particular notice, for its superb decorations and its highly emblazoned insignia of Royalty.

The pantomime selected by the present *entrepreneur* is entitled "Harlequin Hogarth; or, the Two Apprentices Frankford." The opening portion is, we understand, from the pen of Mr. Robert Morton; and the "comic scenes" are by Mr. Nelson Lee. In the former a desire to convey a moral is manifested. The spectator is carried to the swamp of *Idleness*, where, amidst dark caverns, *Idleness* is discovered asleep, and *Ignorance* forging the fetters of *Superstition*. But *Industry* and *Knowledge* approach, and a smiling landscape appears—all is changed from Idleness to animation. The ruined mill becomes a busy printing establishment, and signs of diligence abound on all sides. The subject of the pantomime is then discussed and chosen; and, in accordance with the design intended, we are taken to the foot of Blackfriars-bridge in 1751, where and when the two premises of the Hogarthian story are presented as having just arrived in the metropolis; viz. *Toby Crocket*, the industrious youth (Mr. W. H. Payne), and *David Drone* (Mr. G. Marshall), both on their way to the house of their new master, *Deputy Pygby*, a grocer (Mr. Marshall). We next find them in a double-bedded room, where *Crocket* puts *Drone* to bed; after which a series of pic orial visions presents the course of the story. On awaking, *Drone* gets misled. Looking out of the window, he becomes an inmate of the Thieves' Kitchen, and is admitted a member of the honourable fraternity. Other destiny awaits *Crocket*. In *Pygby's* shop, up with the lark, he finds safe and profitable occupation. Ultimately they approach to attempts the abduction of his master's daughter, who, however, is rescued by the industrious *Toby*. At this juncture all parties meet in the cellars beneath the shop, which change to a beehive, under the dominion of the Lord of fairies, and the usual transformations take place. *Crocket* becomes *Harlequin*; *Drone*, the *Clown*; the grocer, *Pantaloon*; and the daughter, *Columbine*—a character interesting personated by Miss Faiser. The scenery is attractive throughout, and that of the fairy beehive singularly novel and effective. The *tableau* at the conclusion is emblematic of the Triumph of Industry, in which all the resources of the extravaganza of this theatre are brought to bear. Mr. Bunn's management has clearly begun in a manner both to deserve and command success.

HAYMARKET.

The Christmas extravaganza here is, as usual, by the Brothers Brough. It is entitled the "Princess Radiant; or, the Story of Mayflower," and is founded on one of Count Anthony Hamilton's fairy tales. The Count himself is introduced into the drama as *Prologue*, apologising for the highly intricate nature of his plots, explaining preliminaries, and introducing to the audience some of the leading characters in a parody on "The House that Jack Built." The piece opens with Fairy-ongar Palace, and the Court of *Hardcake the Great, King of Candy* (Mr. J. B and), whose daughter has the misfortune to be too beautiful, with eyes so lustrous as to kill or blind all who gaze at her. The returns of "killed and blinded" increase daily. *Prince Bullfinch* (Mrs Fitzwilliam), travelling under the assumed name of *Pooh pooh*, in quest of his lost brother, *Prince Phœnix*, undertakes to find a remedy for the *Princess'* eyes. The fairy *Serena* instructs him in the process. He seeks the witch *Deviata* (Mr. Bonfield), whom he is to deprive of three things—a maiden, named *Mayflower* (Miss Colsins), kept a prisoner by the witch, and destined to marry her deformed son; a magical mare, and a magical hat. To fall in love with *Mayflower*, and to carry her off, are easy tasks; as, also, with her aid, are the other two achievements. But *Deviata* will have her revenge. Disguised as a Bloomer lecturer, she visits the Court of Candy, and rouses the female population to a sense of woman's rights. The town is besieged by a band of amazons. *Mayflower*, in the confusion, is made prisoner. *Prince Phœnix*, though transformed into a parrot, now comes to the assistance of the good and the loving. He, though thus also disguised, has fallen in love with *Radiant* and *Deviata*, to prevent their union, endeavours to wed *Pooh-pooh* to the *Princess*, and works a spell on *Mayflower*, which changes her into an old and decrepit woman, and disappears with her as a dead. But *Pooh-pooh's* love survives a l trials; wherefore *Serena* happily interferes, and, by restoring *Mayflower*, defeats the arts of the witch, and makes the lovers happy. *Phœnix* also recovers his proper shape, and all pass merrily at a marriage feast. Such a plot indicates more than ordinary ambition on the part of the authors; and, with the excellent acting by which it is illustrated, this extravaganza promises to be very successful.

LYCEUM.

Mr. Planché has again resorted to the Countess d'Almois for his subject. The "Prince of Happy Land" is the title of the Christmas spectacle. The hero is in love with a Baron's daughter, who from her birth has been confined in an under-ground apartment, to secure her from a threatened misfortune should she see the light of the sun before she was twenty years old. A black princess, in love with the *Prince*, but rejected by him, resolves on revenge. An opportunity arises; for the *Prince*, in offering for the hand of the fair prisoner, sends a carriage so constructed that the light of day cannot enter it. Seven days are yet wanting of the required age. The black princess, accordingly, lies in wait, and, while the attendants are engaged, cuts the covering of the carriage. The fatal glint of day pours in on the discovered beauty, and she is turned by the *Bad Fairy* into a white fawn, at which the *Prince*, while hunting, fires. But the *Good Fairy* rectifies the mistake. The cast involves the strength of the company—Madame Vestris, Miss St. George, Miss Lenza, Miss Martindale, and Mrs. Grove. The leading actors, and Messrs. F. Matthews, Baker, Sidney, and Horncastle. The scenery is by Mr. Beverley, whose name is a sufficient guarantee for its magnificence.

PRINCESS'.

The pantomime at this excellently conducted theatre is the joint production of the Brothers Sala and Mr. George Ellis. Its title indicates its origin:—"Harlequin Billy Taylor; or, the Flying Dutchman and the King of the Island of Harlicnoo," conducts us to the ballad of "Billy Taylor the gay young fellow," and the legend of the "Flying Dutchman." The piece is compounded of these two stories. The piece opens with some subaurics concerned with sprites, and water nymphs at their Christmas revels, in which *Billy Taylor* enacts the hero. He is, however pursued by *Vanderdecken*, the flying Dutchman. Wrecked on a wo rtiful island, he is about to be married to a black Princess, when *Pretty Poll of Plymouth Pearl* arrives, and incontinently insists him for his infidelity; whereupon arises the requisite comic chan.es—the *Clown*, Exmore; *Harlequin*, Cormaci; *Pantaloon*, Paule, *Columbine*, Miss Leclercq.

ADELPHI.

The managems t here have gone no further than the nursery for a subject. "Little Red Riding-hood" is the title and the theme of the Christmas piece. The dre-sed wolf is represented by Mr. Frank Matthews, whose accoutrements are in character and taste. Miss Woolgar impersonates a German fop, one *Otto von Rosenberg*; and Miss Fitzwilliam performs *Little Red Riding-hood* herself. The scenery is very appropriate, effective, and even splendid.

SADLER'S WELLS.

Mr. Greenwood, the acting lessee of this theatre, is one of our best concocters of popular pantomimes. The title of the present is "Harlequin and the Yellow Dwarf; or the Enchanted Orange Tree and the King of the Golden Mine." We are carried by it in imagination to California; and the treatment justifies the expectation. Much humour is shown in the introduction of the characters of *Old Style*, where the old-fashioned revellers of our early associations are feasting in the true and legit antique fashion, until challenged by *New Style*, who arrogates to herself the attributes of art and science, and reveals a posterity the progress of modern invention. *Old Style*, however, insists on the old custom of a pantomime, and accordingly commences with Mother Bunch's tale of the "Yellow Dwarf." The Fairy Desert and the Fairy Queen succeed, with the interview of the *Princess Alfaur* and the *Yellow Dwarf*. The *Dwarf* saves from the lions, and demands in return her hand; which being declined, he presents her with a lock of his hair, and disappears; but at the bounce to her own bondoir Alfaur appears to have been a dream; when *Cal furma*, King of the Gold Mines, appears to claim her in marriage. The *Dwarf* prevents the nuptials, and carries off the heroine in a storm of thunder and lightning to the Castle of Polished Steel. After the customary pantomime business conducts the *Dwarf* loses the *Princess*, when the *Desert Fairy* appears and effects the transformations. Mr. Rochez is the *Clown*, and Mr. Fearne performs the *Sprite* or *Yellow Dwarf*; Miss De Vere sustains the part of *Columbine*, Mr. G. Fenton *Harlequin*, and Mr Naylor *Pantaloon*. One scene, called "Nobody's House," is to be distinguished for its wonderful changes; but all the scenery, which we should mention of rare excellence, does credit to Mr. Fenton. Success is certain.

CITY OF LONDON THEATRE.

Mr. Nelson Lee is one of the proprietors of this house, as well as author of its pantomime. He has served himself well; and the subject he has chosen is historical. being entitled "Oliver Cromwell; or, Harlequin Charles the Second, Water and the Maid of Patty's Mill." Cromwell, Charles, and Patty's Mill are historically located, is the subject and the oak in which the secreted himself is a prominent object. The Dismal Swamp, or Secret Haunt of Rebellion, opens the Introduction, which consists of *Charles's* antagonism to *Old Noll*, and the love of young *Charley* and the *Maid of Patty's Mill*. The fairy Queen, *Diamond*, then changes *Charley*, the *Miller's* apprentice, to *Harlequin* (Mr. A. Stevens); *Kitty Clover*, the *Maid of Patty's Mill*, to *Columbine* (Miss Rose King); *Charley* to *Clown* (Mr. George Parry); and *Oliver Cromwell* to *Pantaloon* (Mr. More.ll). Three *Sprites* are sent as protectors to *Harlequin* (the Nicole family).

The tricks are ingenious, and their popular application will doubtless secure the success of the pantomime.

ASTLEY'S AMPHITHEATRE.

The subject this year has been taken by Mr Nelson Lee from *Punch*, and is entitled "Mr. and Mrs Briggs; or, Harlequin and Punch's Festival." In a wild romantic dell, six sprites, *viz. Chuckseed, Groundsel, Sowsorrel, Nightshade, Hemlock*, and *Wormwood*, join to carry the rural maid weeds and brushwood. The lark is then heard, and the *Fairy Hope* makes her appearance at early dawn on her encantated steed, and calls together the fairy court, who appear on fairy steeds. The Royal cavalcade of *Dame Nature* is then seen approaching, consisting of ponies, camels, buffalos, deer, &c., forming one of the most effective processions ever introduced in a pantomime. *Dame Nature* arrives at the close in a car drawn by six horses. The Queen informs her subjects that she is displeased with *Earth*, that *Nature* seems quite out of fashion, Being fatigued, she requires a little rest. Desiring her court to retire for a brief period, she endeavours to rest, but is prevented by the sound of an approaching railway carriage. *Art* arrives. *Nature* advises him to pass on, and not interfere with her quiet home. *Art* tells her she is jealous of his success, at which *Nature* laughs most heartily. *Art* waves his sceptre, when Paxton's Crystal Palace in all its splendour appears, and *Nature* is reconciled. *Punch* being directed to go out at once to *Earth*, with instructions to call on Nelson Lee and select material from his pantomime repository, which he does by adopting the humourous adventures of *Mr. and Mrs Briggs*, which precede the transformations. The pantomime is produced regardless of expense, and its success may be considered certain.

SURREY.

The pantomime at this house is by Mr E. L. Blanchard, who has preferred a Persian fable to a fairy legend; making, moreover, his fabulist for the nonce under the name of Hafizal Pun, to whom is attributed the story of the "King of the Golden Seas; or, Harlequin Blue-cap and the Three Kingdoms—Animal, Vegetable, and Mineral." The dialogue portion of this pantomime affects the burlesque; and, notwithstanding the precautions of the Lord Chamberlain, is amply stored with political puns and popular parodies. In the Golden City the *Emperor Ekrampane* insists on the marriage of his daughter *Szechorina* with the great *Grumpaffa*, King of the Ugly Isles. But *Prince Blue cap* also claims her hand, and ultimately gets the imperial consent, on condition that he shall set forth at once and win three treasures, from the animal, vegetable, and mineral kingdoms. These he wins, and returns with the golden scissors of the "King of the Golden Seas; or, Harlequin Blue-cap and the Three Kingdoms—Animal, Vegetable, and Mineral." The dialogue portion of this pantomime affects the burlesque; and, notwithstanding the precautions of the Lord Chamberlain, is amply stored with political puns and popular parodies. In the Golden City the *Emperor Ekrampane* insists on the marriage of his daughter *Szechorina* with the great *Grumpaffa*, King of the Ugly Isles. We shall notice the new entertainments at the Olympic, Marylebone, and Punch's Theatres next week.

ROYAL "MARIONETTE" THEATRE.—On the site of the once-popular Gallery of Practical Science, in Adelaide street, Strand, a very elegant theatre has just been constructed for the performance of a *troupe* of *artistes* of an extraordinary character. Vaudevilles, spectacles, burlesques, and bal ets will here be represented by "Marionette or mechanical figures, who are said to excel in their very gesture." The scenery will be remarkable for artistic truth, the dresses for their splendour and strict adherence to historical authority, and the decorations for their gorgeousness and correctness.

MUSIC.

THE LYRIC, MADRIGAL, AND GLEE CLUB.

The last meeting of the first series of concerts took place on Monday, at the Whittington Club. The principal singers were Miss Thornton, Miss A. Wells, Mrs. Cox, Miss A. Cox, Messrs. Foster, Pope, Hobbes, Donald King, Herring, Ball, H. Buckland, Wilkinson, and Mattocks. The selection comprised Sir H. Bishop's "Now by day's reviving lamp," "Oh, rather each flower," "Give me a cup of the grape's bright dew," "A cup of wine," and "Welcome, welcome, lady fair;" Dr. Callcott's "Mark, the merry elves of fairy land," "With signs, sweet rose," and "Green thorn;" Horsley's "By Celia's arbour;" Evans's "Say, mighty Love;" the Earl of Mornington's "O lord of eve;" Welch's "Merry ripples;" Spofforth's "Hail, smiling morn;" Stevens's "Ye spotted snakes," Maxsingh's "Rhoderich Vic Alpine;" Dr Arnold's "In summer's cool shade;" Morley's madrigal, "Fair Phœbe;" and G. W. Martin's madrigal, "Come, let us all a-Maying go." Mr. J. A. Longhurst was the pianoforte accompanyist, and Mr Shoubridge the conductor.

A second series of these excellent concerts is announced, to begin early in the new year.

LONDON SACRED HARMONIC SOCIETY.

Notwithstanding the bad weather, the attendance on Monday night, for the annual performance of the "Messiah" in the Christmas week, was considerable. Mrs Sunder.and, Mrs Temple, Miss Dolby, Messrs. Lockey and Phillips, were the principa. singers; Mr. Surman was the conductor; Mr. Jolley, the organist; and Mr. H. Blagrove, leader of the band. The sublime oratorio was preceded by a new Christmas anthem, by Mr G. W. Morgan, the organist of South Hackney Church, performed under his direction, and the verse parts sung by Mrs. Temple, Miss Dolby, Messrs Lockey and Phillips. The words are from Luke ii., v. 8 to 14, "There were shepherds." The execution was imperfect, but the composer has evidently studied the best masters of the church school. Sung by voices only, this anthem will be effective. It is in the key of C, with a clever change in the key in the verse, "And the angel said," and again in the words "And suddenly." The next performance will be on the 30th of January, when Handel's "Samson" will be given.

SACRED HARMONIC SOCIETY.

According to the annual custom of this society, Handel's "Messiah" was performed in the Christmas week, on the Tuesday evening. Mr. Bowesmith was the organist, Mr. Cooper the principal violin, and Mr. Costa the conductor. The vocalists were Misses Birch and Dolby, Messrs. Lockey and Phillips.

THE CECILIAN SOCIETY.

The annual performance of Handel's immortal oratorio, the "Messiah," took place at the Albion Hall on Wednesday. Mr. G. Beardman was the organist, and Mr. Gadsby the conductor. The vocalists were Mrs. John Roe, Mrs. Dixon, Mrs. Seymour, Mr. J. W. Barsham, and Mr. Witners.

MUSICAL EVENTS.

MR. BLEWITT.—The grand vocal and instrumental concert for the benefit of the popular composer, Mr. Blewitt, now on a bed of sickness, and upwards of 70 years of age, and of his family, will take place on the 21st of January, at the Hanover-square Rooms. The following committee of professors and amateurs have undertaken to act as a committee of management:—Chairman Potter, Esq. (Principa. of the Royal Academy of Music), chairman, Sir H. K. Bishop, Sir George Smart, Mr. Secondary Potter, Messrs. T. F. Beale, Wilbert Beale, W. S. Bennett, F. Chappell., B. Chatterton, H. F. Cole, F. Gilliman, C. Glover, C. L. Gruhnsiun, J. W. Hobbs, G. A. Macfarren, C. Neate, W. L. Phillips, Rowe, M.D., H. J. Smith, Stohwasser, Whitmore, and Zach; R. Addison, Esq., hon. treasurer, and Messrs. Brizzi and Lindsay Sloper, hon. secretaries.

ROYAL ACADEMY OF MUSIC.—The examination for the King's scholarships took place on the 19th inst., at the institution in Tenterden-street, Hanover-square. The board of examiners consisted of Mr. C. Potter (Principal), Messrs. J. Goss, C. Lucas, R. Blagrove, J. Howell, G. A. Macfarren, and W. Dorrell. The number of candidates was 33, namely, 17 boys and 16 girls. The scholars elected were Miss Rosetta Vinning and Master John Barnett, a nephew of the celebrated composer of that name. These were the great talents exhibited by the competitors, and amongst those highly distinguished were Miss J. Aylward and Masters W. Pettit and Henry Banner.

Herr Sommer commenced last night, at Willis's Rooms, his series of concerts, with the Sommeropnde band, fifteen Hungarians in their full native costume, Mdlle. Jenny Hund, his pupil, and Mdlle. Hiller, from Brussels.

Mr. George Genge's annual concert will take place next Monday at the London Tavern, and will end with a ball.

The Western Madrigal Society will have their meeting this evening at the rooms in Berners-street.

The fourth concert of the Royal Society of Musicians took place last Monday.

The Liverpool Classical Concerts commenced last Tuesday, under the direction of Mr. E. Thomas. Mr. W. Sterndale Bennett performed on the pianoforte.

MUSIC IN PARIS.—Madame Frezzolini was to make her *début* at the Théâtre Italien in Bellini's "Beatrice di Tenda" on the 15th inst. Mario had left Paris to pass the winter in Scotland. Duprez [illegible] with his daughter, Mdlle. Caroline Duprez, who terminated a [illegible] at Brussels on the 16th inst. There is an intention, it is rumoured, to [illegible] Mdlle. Sophie Cruvelli had played the part of *Maria* in Donizetti's "Figlia del Reggimento." "Light music," states the *Revue et Gazette Musicale*, "does not get better patronage than the concerts of Prudent, the pianist and 'Errant' music is no longer adapted for her than that of *Maria*." Calvalari and Ferranti sang in "La Figlia;" and M. Charles Eckert conducted the orchestra, in place of M. Hiller. Madame Tedesco's delineation of *Fenella* in "Masaniello," at the Grand Opera, is stated to resemble that of Adeni more than Viardot, from which it may be concluded that the singing passed more than the acting. Charles Gounod's "Sappho" had been revived for Mdlle Masson, in the character sustained by Madame Viardot; Mdlle Poinsot, MM. Guevmard, Avmet, and Brémond were assigned the other parts. The opera had been judiciously curtailed, and the character of *Alcée* entrusted. Felix Davidi's "Desert" was playing at the Opéra National on alternate nights with "Le Perle du Brésil." Viardot had left Paris to pass the winter in Scotland. Duprez [illegible] with his daughter, Mdlle. Caroline Duprez, who terminated a [illegible] at Brussels on the 16th inst. There is an intention, it is rumoured, to [illegible]

tax for the poor on the receipts of theatres and concert-rooms from eleven to three per cent., which would be a great relief to the directors and givers of musical entertainments. Ernst has announced a concert in the course of next week.

AN ORGAN-GRINDER.—A wandering street organ-play er has just died in Vienna leaving a fortune of about £500.

MUSIC IN GERMANY.—On the 18th December, the anniversary of the birth of Weber, the theatres played one of his works. At the Theatre Royal, Berlin, his "Der Freyschutz" was revived, with new dresses and decorations. Rosenhain's "Démon de la Nuit," originally produced in Paris, has been brought out at Frankfort, his native city, with brilliant success, the composer being called for at the close of the opera, with the chief singers: Madame Anschütz-Capitaine sustained the chief part, *Mathilde*.

SINGING OF A VETERAN VIOLINIST.—The *Revue Musicale* records the death of an aged violinist in the Rue St. Martin lately, from suffocation by charcoal, who left the following singular letter by the side of his body:—"Formerly I had talent, and I held the first position in our principal theatres. I remember the palmy days of the Opéra Comique, when, disdaining the notes of the present day, sentimental harmony was heard which penetrated heart and soul. I earned a great deal of money, and I lived like an *artiste*—freely; and now I am about to die like many *artistes*—miserably. If ever you read this letter of an old musician, let it be a lesson to you! Young people who have talent, practise the old proverb, 'Keep something for a rainy day.' (Il faut conserver une poire pour la soif.) I forgot to do so, and I am unfortunate. The compassion of *artistes* might have helped me, but I was too proud, and I should have blushed to have reminded those who knew me in prosperity. I have preferred, although scarcely able to hold the bow on account of my great age, to turn street musician. A few necessaries were procured by this means; but daily I became more feeble. I had relied on the goodness of Providence, and I hoped to win a prize in the golden lingot lottery, but I could only buy one ticket, 4,547,989; and if it had produced me the smallest sum I might have peaceably ended my days; but, since God has otherwise willed it, I am resigned to death. Pray for the old musician."

THE REAL UTOPIA.

(An Imitation from the German.)

I HEARD a story once; 'twas on a quay
At Venice, sea-born city, where of all
The Lion of St. Mark is held divine.
A listening crowd had gather'd round the man,
Who told it in a circle; and 'twas thus
The ragged rhapsodist addressed them:—"Friends!
(He said) a storm once cast me on the coast
Of a fair isle—Utopia was its name.
I doubt if any here have seen the land:
It lieth in the ocean, to the west
Of where the sun goes down. That matters not.
I was well-treated; taken to an inn,
Where food and drink were brought me of the best;
At night my couch was silk. So passed a month,
Brief as a week, and I had quite forgot
The taste of trouble; but at last there dawn'd
A small anxiety; the bill I thought.
What of the reckoning? The cheer is good,
But how about the payment? For my purse
Was as it always has been. So I ask'd
Mine host to bring me less; and lo! my meal
That day was doubled: on the table stood
Two dishes for each one the day before!
Then terror seized me, and I could not eat,
But found a voice to speak, and said, 'Mine host,
I pr'ythee make thy reckoning moderate,
For'——' But his brow grew dark, and with grim eyes
He look'd at me askance; then seized a staff,
And swung it over me, and let it fall
Upon my head, my shoulders, and my back—
Beat me half dead, indeed. So that I ran
And sought the judge. There was no summon'd too:
He came quite calm, and with collected speech
Stated his case against me: 'Such should be
The treatment of all those who break our law
Of hospitality. This stranger man
Ask'd me, his host, how many days I stayed:
I, who had lodged and fed him! Should I bear
This insult offer'd me beneath my roof?
My heart is not a sponge, but flesh and blood—
And so I beat him.'

Then his Worship spake:—
'Forget the stripes,' he said, 'they were deserved—
Yea, had they been far heavier; if thou wilt
Inhabit in this isle, thou must obey
Our laws, and prove besides that thou art fit
And worthy to become a citizen'

'Alas!' I said, 'Sir, I have never work'd.
Could I avoid it; know no trade, no craft,
Possess no talent; and, indeed, was sent
Abroad as fit for nothing!'

Then the judge
Embrac'd me, saying, 'Welcome; thou shalt take
The upper place where'er the commune meets,
And in our council have a seat and voice
Such as they merit claims. But take good heed:
Beware lest any shameful lapse from grace
Seduce thee into labour; let no spade,
Nor axe, no wicked implement of toil,
Be found within thy dwelling; thou wert lost
On mere suspicion of a wish to work:
The act itself is penal. What thou hast
To do among us is, to sit at noon
Upon the market bench, with folded arms,
And listen to our ministrels; there will be
A fe low-citizen, from time to time,
To place a bottle by thy feet, and pipes
Beside thee, seeing nature needs support.
Five times a day we eat. At eve thou mayst
Look at our maidens dancing—but this last
Is not compulsory. Thy duties these'"
The story-teller ended, and the crowd
Around him laugh'd immensely; not without
A wish, perhaps, to land on such an isle,
And find such hosts, such judges, and such laws—
Alas! so different from the same things here!

Berlin, Dec. 14, 1851. L. F.

THE DESERTED CITY.—(Extract from letter.)—Melbourne, June 8, 1851.—Upwards of 1000 persons have left Melbourne during the last week. Houses begging at almost any rent, and the means of equipping themselves have started without a shilling in their pockets, with a wardrobe consisting only of a possum rug and an extra shirt, on foot, to reach the Eldorado at Bathurst (a distance of near 600 miles), or perish in the attempt. You cannot imagine the effect the rush on Melbourne, only three weeks since so flourishing. Buildings are at a standstill. Stocks and stations, which a month since were worth more than they have been for years, are quite unsaleable, for it is impossible to get men to stop at any wages, and the settlers despair of getting their sheep either looked after or shorn. Houses and land are at half the value already, and one large capitalist stated that the property alone depreciated within a week to the extent of £15,000. No doubt this will soon correct itself; and it is the opinion of the most shrewd and experienced Melbournites that the next two years will offer better opportunities for the investment of capital here than ever. Flour was doubled in value during the last month; and speculation in all sorts of edible stuffs is carried to madness. Every effort is being made to form a new (gold-digging) district, in order to induce the laboring men to remain here, not without success. Every morning papers teem with reports of some one having brought in specimens of ores discovered in the neighbourhood of Melbourne; that there is gold, no one doubts; but in what quantities, it remains to be proved. I hear from Sydney that stockholders are offering £1 a week with double rations to men as shepherds, but were unable to get them even at that price. Nothing can induce men to stop away from the place where they expect to make an independence in a few days.

PAUPER'S BADGE.—The 8 and 9 Will. 3, c. 30, s. 2, required all paupers in the receipt of parochial relief to wear a badge bearing a large Roman P on the arm or on the breast of the outer garment of the pauper, cut either in red or blue cloth, upon the shoulder of the right sleeve of the uppermost garment, in an open and visible manner, under certain penalties, and prevented paupers who neglected to wear it from being relieved. This provision of the statute was repealed by 5 Geo. 3, c. 82, and although by the 58th Geo. 3, c. 137, s. 2, [illegible] are [illegible] to be branded with the word "work-[illegible]" [illegible] in view of providing a revival of the former mark of degradation, that such mark or stamp should not at any time be placed on any article or wearing apparel, so as to be publicly visible on the exterior of the same.—From *Notes and Queries*.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The health of Lord Panmure, which had for some time been in a declining state, is now considerably improved, and all fear of immediate danger is at present dispelled.

The last letters from Madeira state that Lord Frederick Fitzclarence was suffering from another severe attack of gout, and that Miss Fitzclarence was with him.

Among the French refugees now in Brussels are MM. Victor Hugo, Baune, Edgar Quinet, C. Floel, Yvan (the young orator who made a most brilliant speech against Louis Napoleon shortly before the dissolution of the Assembly), Peletier, and Alex. Dumas.

The Scottish newspapers are engaged in a crusade against 'the drunkenness that usually distinguishes the advent of the New Year on these side of the Tweed.

The Archduke Albert, Governor of Hungary, left Vienna for Pesth on the 11th, charged with legislative and judicial powers, in addition to the ordinary authority of the Government.

The second division of the third volume of Alexander Von Humboldt's "Kosmos" has just issued from the German press. The new chapters treat of the circuits of the sun, planets, and comets, of the zodiacal lights, meteors, and meteoric stones. The uranological portion of the physical description of the universe is now completed. Letters from Stuttgart state that the veteran philosopher has already made good way into the fourth volume of his great work.

The monster iron steamer building for the Peninsular and Oriental Company, and which is to run between Southampton and Alexandria, is to be named the *Himalaya*.

Subterranean electric telegraph lines are to be laid down in Russia, to connect St. Petersburg with Moscow, and those cities with Warsaw and Odessa. Other lines are to run to the Caucasus, the Ural Mountains, and the principal ports.

The private apartments of the Royal family of Orleans in the Palais Royal are being cleaned and renovated. The front of the palace facing the Place is also being cleaned and restored.

In advices which have reached us this week from Melbourne, Port Phillip, the official advertisement of the discovery of gold in that colony is notified. The diggings are named where it exists "in considerable quantity."

The American clipper-ship *White Squall*, Captain N. Goodwin, from Macao Roads, 8th September, arrived off the Isle of Wight on the 6th inst., and in the Downs on the night of the 18th, thus making the passage from China to the Isle of Wight in 99 days, and to the Downs in 101 days—the quickest of the season. She encountered a typhoon shortly after leaving Macao Roads. From the Natunas to Gaspar Straits she had light winds and calms, two days at anchor at Ai Jear, and lost her mainmpmast off Madagascar, which kept her under easy sail for three days.

At a general meeting of the Chartered Gas Company on Tuesday, Mr. Benjamin Hawes, sen., the deputy-governor, was elected to fill the post of governor.

Thomas Phinn, Esq., Recorder of Portsmouth, in a letter to the council of that borough, read at its meeting on Monday, sent in his resignation of that office, having been appointed to the recordership of Devonport, vacant by the transfer of Mr. Greenwood, Q.C., to the assistant solicitorship of the Treasury.

Advices from Berlin of the 20th inst. announce that the new Prussian Four-and-a-Half per Cent. Loan had just made its appearance. The amount was equal to about £2,400,000 sterling, and the issuing price was 100, with a small commission to the chief subscribers. It had made no impression on the Berlin Bourse. The scrip would be issued on Jan. 1.

The Peninsular and Oriental Steam-packet Company's ship *Madrid* has brought to Southampton this week, from the Peninsula, twenty-nine Englishmen who were taken prisoners in the late Cuban expedition, and liberated by Spain.

The monuments in Guildhall have been cleaned and the interior has been renovated recently.

A groom belonging to Liverpool recently came into possession of a fortune of £20,000.

On New Year's-day the Hat Reform will commence in Birmingham, by the public wearing the "Kossuth hat."

The authorship of Junius, so long a vexed question, is again discussed in the *Quarterly*. Lord Mahon in his history of England maintains that Sir Philip Francis is the author. The publication of the Grenville papers is exposed to throw some light on the subject; but, in opposition to Lord Mahon's opinion, Lord Temple is named as the author of the letter.

It has been calculated that the year 1851 has produced upwards of twenty millions sterling of gold; namely, 14 millions from California, 4 from Russia, and from Australia. It has been estimated, that the quantity in 1852 will be trebled. Letters from Hawaiian, Sandwich Islands, state, that gold in great abundance had been found.

A complete edition of Shakspeare's plays, translated into the Swedish language, by Professor Hagberg, of Upsal University, has been published at Stockholm.

The popular notion, based on the translation of the Chinese word *man* by Sir John Davison, that it signifies "barbarian," is declared by Mr. F. Thomas to be an incorrect interpretation of the epithet applied to Europeans by the Chinese. Mr Thomas contends that it means "southern merchant."

A widow lady, residing in Berkshire, has offered 50 guineas, to be paid in March next, in aid of the funds of the Free Cancer Hospital, Cannon-row, Parliament street, provided 19 other similar sums be forthcoming at that time for the like charitable purpose.

Our Assistant Royal Mr. Airy, has been elected honorary foreign member of the Royal Society of Sciences at Gottingen, on the occasion of its hundredth anniversary.

The professorship of anatomy in the Royal Academy, according to the *Athenæum*, has just been resigned by Mr. Joseph Henry Green.

The *Brita* steam-vessel, which was taking from Hamburg to Gottenburg the colossal statue of Gustavus Adolphus, cast at Munich, has been wrecked on the island of Helgoland, and the statue lost. The original was executed at Rome, where there was a failure to produce a cast, and it was subsequent y sent to Munich, where the casting took place, and the model now remains in Ireland.

The gross receipts of all the Prussian railways during the first ten months of the present year amounted to £1,417,551 16s., being an increase of £293,108,16s. on the corresponding period of 1850. The total extent of the Prussian railways is now 717 French leagues. The shortest line is that from Dusseldorf to Elberfeld, which is only eight leagues, and the longest that of the East, which, when terminated, will extend 136 leagues.

The King of the Belgians has sent the Marquis Massimo d'Azeglio, President of the Council of Ministers at Turin, the Grand Cordon of the order of Leopold.

The *Moniteur* of Paris publishes the returns of the produce and consumption of beetroot sugar since the beginning of the season, from which it appears that, on the 1st of December, there were 322 manufactories in operation, or 23 more than in the corresponding period of 1850. The quantity of sugar manufactured, including the portion lying over since last year, amounted to 19,535 395 kilogrammes, and that stored in the public bonding warehouses to 10 940 947.

His Royal Highness Prince Albert has consented to become the patron of the Royal Polytechnic Institution.

The late Mr. Field, of Lancaster, has bequeathed his herbarium to the University of Oxford, upon certain conditions. This collection, formed at a very large expense, is understood to consist of 70,000 species, forming one of the most complete herbaria in the world.

The new law in Prussia interdicting the presence of the public at executions was put in force recently, for the first time, at Neuwied, on the occasion of the murder of his wife. Only the legal authorities and twelve persons, taken by lot from the jury list, were present in one of the courtyards of the Eisdietz Ville. The criminal had been previously condemned to have labour for life for killing his first wife, but had been pardoned.

A return to Parliament has been printed, showing that, to the spring assizes in the present year, the advances for the labour rate in Ireland amounted to £411,427 19s. 10d., of which £263,849 8s. 1½d. had been paid to the county treasurers, and £75,629 16s. 1½d. was still leviable under the outstanding warrants.

The Customs authorities have empowered their landing surveyors at the several packet ports in the United Kingdom as well as at the port of London to allow the amendment of entries in certain cases of incorrect entry or under valuation, in which they are fully satisfied that no fraud has been intended.

An old soldier of the Imperial Guard, named Cantillon, of whom the Emperor Napoleon made mention in his will, has just died at Rancey, in France. He was accused in 1815 of having fired a pistol-shot at the Duke of Wellington. The Emperor handsomely him for the harsh manner in which he was treated, bequeathing him 10 000f.

An attempt is now being made by some of the merchants and tradesmen of Berwick-upon-Tweed to form a company for the purpose of carrying on the cod-fishing at Iceland, and it is said that their exertions are likely to be successful.

The *Alton Advertiser* states that a concert, announced by the Misses Smith to have taken place at Kingsclere, on the 12th ult., had to be broken off because the farmers had could not procure a piano to accompany them, either in that town or in Alton, both of which places had been ransacked for an instrument. The ladies should have tried their voices with the bagpipes, of which, of course, there was no lack.

From an official document, just issued, it is shown that the cost of taking down, repairing, and remodelling the Marble Arch, now at Hyde Park-corner, was little short of £11 000.

The total amount expended on Battersea Park, up to the 30th of March last, was £.90,000 and a similar sum has yet to be expended. The land so properly named £292,694, the official valuation of which was £.87 13.

For the new suspension bridge at Chelsea an advance of £120,000 has been authorised by the Public Works Commissioners.

CHESS.

TO CORRESPONDENTS.

A MEMBER.—No one with a spark of gen lemanly or fair-play feeling would presume to intrude his unsolicited advice upon one upon a subject to which he had been talking. The case you name has would certainly not be tolerated in any other club in England. Why have not the committee or members addressed the counsel on the subject?

C.—NEW CHESS CLUB AT HALIFAX.—We are glad find to hear of the formation of the Halifax Chess Club, which has already been got up by the leading players of the district, including Messrs. Bean and Edwards. M.P., W. H. Hawson, Jun. Lieut. Gardiner, J. P. Edwards, F. W. Crowhelm, T. Turley, W. Crowhelm, J. G. Thomas, E. Crowhelm; and shall be glad to receive the intended list of members, and the rules and regulations.

W.—1. The first when in play would give to either of the others odds. 2. Look to any of our solutions.

LLANELLY.—When a chess problem is to be solved in any given number of moves, it is supposed to be impossible to effect mate in fewer moves.

W. P. J.—It would require more space than we can spare to explain it. You had better consult the "Handbook" referred to above, pp. 14 and 35.

J. G. of Ipswich—Your very neat little end-game shall appear.

L. N.—We believe the chess-board in question, which originally belonged to Philidor, and was presented by Lord Henry Seymour to Lieut Harry Wilson, is still in the possession of Mrs. Wilson. We have played many a game upon it "long syne," and well remember the pride with which the gallant owner would dilate upon its "celebrities" he had encountered on "the field of Philidor."

M. E.—Perhaps the letter was overlooked, or not received, or came too late. In any case it was of no great importance surely.

J. W. Coventry.—We have not room, as there are several variations. The first move is—1. P to Q 4th. etc: and you will find the complete solutions in the Number for May 24th.

B. W. P.—7 or shall be examined.

VIDA.—Make White's second move P to Q Kt 4th.

VERITE.—The best way of solving such a difficulty is to consider the game a drawn battle and begin another in its stead.

DRAGON.—See the notice shewn to "Member."

ATTA.—It is scarcely possible to play over games correctly with the old chessmen. Get a set of these called the "Staunton men," *which have distinguishing marks for the pieces on the flat of a side.*

J. G. P., Worcester.—You may obtain the laws of "double chess" of Lonchars, in Piccadilly.

PHILO-PHILIDOR.—In despite of such authority, we maintain that it is illegal to castle while you are in check. The case you mention must have been an oversight.

NORTHUMBERLAND.—1. The "Chess-player's Handbook." 2. You Heydebrant der Lasa, Kieseritzky, and Anderssen. 3. The disturbed state of France may probably occasion some delay.

ERRATUM, Bray.—*The Chess-Player's Chronicle*, published the last of every month, 21, King William-street, Charing cross.

SOLUTION OF PROBLEM No. 413, by Mephisto, M E R, Llanelly; W H T, of Torquay; E J, of Newport.

SOLUTION OF PROBLEM No 411, by F C, Lyme, Dorsetshire.

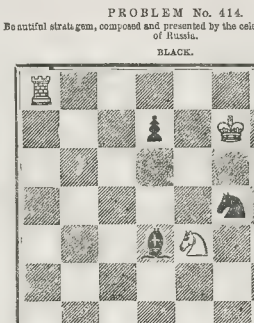
SOLUTION of PROBLEM No 413, by N S, Aphs, F R S, M P, Phila, M E R, Bath Duo, Beppo, R W, R S of Ashford, John Crow, Toby, Dorcas, Jack of Shrewsbury, H W P.

SOLUTIONS OF ENIGMAS by Bath Duo, R S of Ashford, Lady, Dorcas, Jack of Shrewsbury, H W F, of Farwick, M P, are correct; all others are wrong.

PROBLEM No. 414.

Beautiful strategem, composed and presented by the celebrated M. PETROFF, of Russia.

BLACK.



WHITE.

White, playing first, gives mate in five moves.

CHESS IN THE METROPOLIS.

GAME RECENTLY PLAYED BETWEEN MESSRS. BUCKLE AND LOWENTHAL.

(Irregular Opening.)

BLACK (Mr. B.)	WHITE (Mr. L.)	BLACK. (Mr. B)	WHITE (Mr. L.)
1. P to K B 4th	P to Q 4th	25. Kt to K 2d	Q to K B 5th
2. P to Q Kt 3d	P to K 3d	26. K R to K 2d	K to Q 2d
3. B to Q Kt 2d	P to Q B 4th	27. R to K B 2d	Q to K 4th
4. Kt to K B 3d	Kt to K B 3d	28. Q R to K sq	Q R to K sq
5. P to K 3d	K B to K 2d	29. Q to K 2d	K R to his 3d (c)
6. B to Q Kt 5th (ch)	B to Q 2d	30. P to K Kt 5th	Q takes P (d)
7. B takes B (ch)	Q takes B	31. Kt to K 8 8th	K to K 3d
8 Castles	Castles	32. Q R to K Kt sq	Kt takes Kt
9. Kt to Q B 3d	Kt to Q B 3d	33. R takes Q	K R takes Q
10. Kt to K 2d	K Kt to his 5th	34 Q R takes Kt	P to K Kt 3d
11. R to Q Bsq	B to his 2d	35 R takes K B P	P to Q 6th
12. B to Q R 3d	P to Q Kt 3d	36. K to his Kt 2d	P to Q R 4th
13. P to K R 3d	Kt to K R 3d	37. R to Q 7th	Q R to Q 6th
14. P to Q 4th	Kt to K B 4th	38. P to K R 4th	K R to Q B 7th (e)
15. Q to her 3d	B to K 2d (a)	39. R to Q 8th	Q Kt to K 7th
16. P takes P	P takes P	40. R takes R	P takes R
17. P to Q B 4th (b)	P to Q 5th	41 K to his B 2d	R takes R P
18. P takes P	P takes P	42. K to his sq	P to Q R 5th
19 B takes B	Q takes B	43. P to Q Kt 4th	R to Q Kt 7th
20. K to his R 2d	R R to Q sq	44. P to Q Kt 5th	P to Q R 6th
21. P to K Kt 4th	Kt to Q6th	45. R to Q 8th (ch)	K to B 2d
22. K R to K sq	P to E 4th	46. R to Q B 8th	P to Q R 7th
23 P takes P	Q Kt takes P		And Black resigned.
24. Kt takes Kt	Q takes Kt (ch)		

(a.) This was necessary, as Black might have driven away the K Kt, and thus have won the Q B P.

(b) Premature. By advancing too soon, Black allows his adversary a passed Pawn that, ere long, proves a formidable foe.

(c) Threatening to take the K Kt P with his Kt, checking.

(d) Better chose than playing Kt to Kt 8th (ch). (e) Well played.

CHESS ENIGMAS.

No. 702.—By A. B. SKIPSWORTH, Esq., of Cambridge.

White: K at Q 3d, Kt at K B 8q; P s at Q 4th, Q R 3d, and Q Kt 4th.
Black: K at his B 7th, P s at K R 6th and Q B 2d.

This situation occurred in play. Mr. S., having the move, won the game.

No 703.—By Judex.

White: K at Q Kt 8th, R at Q Rsq. B at Q 8th, Kt at Q R 4th.
Black: K at Q Kt 6th, P at Q B 6th.
White to play, and mate in six moves.

No. 704. —*La Régence.*

White: Kat B sq, Q at K B 2d, Kt at K B 4th, P at K Kt 3d.
Black: K at K B 4th, Rs at K Kt 6th and K 7th, P s at K R 3d.
White to play, and mate in five moves.

No. 705.—By KIESERITZKY.

White: K at K B 6th, R at Q 8th, B at Q Kt 3d, Kt at K B 6th, P s at K R 6th and K 6th.
Black: K at K B sq, Rs at K sq and Q Kt 7th, B at K 2d, P at K R 2d.
White to play and mate in four moves.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—The remarks of your correspondents in your recent Numbers have verified the necessity of a Chess Congress. That the proceedings connected with the Tournament should have terminated without this most desirable meeting cannot be a subject of too much regret. To the majority of Chess amateurs the play was a secondary object; a consistent code of legislation was a matter of the highest importance. Some uniform system of notation, some common language adopted throughout Europe, because recommended by the first masters of Russia, France, Germany, Hungary, and Great Britain, and other advantages too numerous to be mentioned here, would have been fairly expected to have sprung from the summoning of the Chess Parliament. Amongst the questions of most practical value which should have been then considered is that of fixing some limit to the time occupied by players on a single move. That, as the law stands now, a player may consume an hour, or even twenty-four hours, upon a move, cannot be controverted. *Morality* he may not be justified; *legality* he is bound by no reservation. I regret to state that an unnecessary protraction of games has lately become prevalent in England. This evil, it must be owned, owes its origin, though accidentally, to players of the highest order. It being truthed abroad that the games of celebrated masters occupy a considerable time, weak players are deluded into the idea, that, if they can only *waste* (I can use no milder word) several hours in an attempt to catch a stray pawn or in some equally valuable employment, they are at once promoted to the rank of a M'Donnel or a St. Amant. During the Tournament I heard a player absolutely congratulate himself on *his* own game having *at any rate* lasted more hours than any other on the previous day. It does not seem to enter into the notions of some players, that game abounding in beautiful position, which last a few hours, are perhaps superior to dull games which endure (or are endured) for a day. Would you, I may be asked, spoil games by limiting the time bestowed on their consideration? Certainly not spoil games, but I would prevent waste of time and *mind*, and injury to health, and, above all, ruin to Chess. Ruin to Chess; for amateurs would rapidly give up the practice of that which threatened to engage the whole of their lives. Let us consider this question by the light which two parallel cases throw upon it. It was a pretty prevalent opinion, a session or two ago, that a great deal of unnecessary time was consumed in the debates of Parliament. Hereupon was cut out a mass of evidence bearing upon the expediency of abridging speeches. I refer your readers to the evidence especially of that distinguished statesman, Guizot, and to his remarks on the practice adopted by the French Chambers to put an end to useless speaking. Surely any argument which might be raised against a limitation of time in Chess would apply with more force to these momentous debates; and yet, for *practical advantage*, this argument was disregarded.* My next case is supplied by our University examinations. In these a definite time is assigned to every paper, and, I must think, wisely assigned. It is true that, if the whole time spent by a few hours were given, some papers might receive a higher degree of finish; but would not examinations thus protracted, to a certain extent, pass into contests of physical endurance, and lose their purely mental character. General should be held out to a kind of instinct, whether given by nature, or obtained by a previous educational training. This holds good in Chess as well as in other intellectual pursuits. In a match, men do not come together entirely ignorant of the tendencies which various classes of positions have, but in order to display their genius or their previously acquired knowledge. If they are not men of genius or experience, they should either not play matches, or at least not be permitted to waste more of the time than is indispensably necessary of those who do possess real Chess qualifications. In this letter I have contended for the importance of fixing a limit to the time at present misspent on simple moves and games; the nature of the limit, which is a subject of greater difficulty, may, if you can spare me space, be discussed with advantage in another letter.

Your obedient servant,
Hermes Club, Dec. 9, 1851. OXONIENSIS.

* The limitation of speaking in the Athenian courts of justice, by the use of the clepsydra, is likewise deserving of notice.

CHURCH, UNIVERSITIES, &c.

CORPORATION OF THE SONS OF THE CLERGY.—The Christmas meeting of this ancient society, chartered by Charles the Second, under the title of "The Charity for the Relief of Poor Widows and Children of Clergymen," was held on the 20th inst; Sir Robert Harry Inglis, Bart., M.P., in the chair. Amongst the governors present were Alderman Copeland, M.P., and James William Freshfield, Esq., M.P.; the two treasurers, the Venerable Archdeacon Hale, the Rev. D. Vivian, the Rev. Canon Jennings, the Rev. Samuel Wix, &c. The registrar (C. J. BAKER, Esq.) having stated that he was desired by the Archbishop of Canterbury, President of the Society, to express the great regret his Grace felt that, in consequence of ordinations in his diocese, he was unable to attend upon so interest ng an occasion as the present, when the governors were assembled to distribute the Christmas benefactions to his poor brethren in the ministry, the meeting proceeded to grant donations of from £5 to £30 to poor clergymen in all parts of England and Wales whose character and necessities were satisfactorily attested. Out of the whole num er of 106 applying, 80 were assisted. At the same time donations for apprenticing ten children of poor clergymen, and for supplying outfits to ten others entering upon situations in life, were granted; and 23 widows and aged single daughters of clergymen, all in distressed circumstances, received a small gift.

It is stated that a project is on foot for restoring Carlisle Cathedral to what it was before Cromwell's troops knocked down a portion of the nave. The expense would be £10,000.

By Royal mandate the University of Cambridge has conferred the degree of D D upon the Rev. Richard Farnham, B D., of St John's Principal of St. Bees, Cumberland, and Canon of Manchester. The grace conferring the degree passed on the 10th inst.

The Bishop of Chester has granted a licence of non-residence for a year to the Rev. W. H. G. Wynn, vicar of Ewden, on account of ill health.

On Sunday morning the Lord Bishop of London held a general ordination at the Chapel Royal, Whitehall, when several gentlemen were admitted into holy orders. The Bishop was assisted in the ordination of priests by the Rev. W. G. Humphry, his Lordship's examining chaplain; and the Rev. Charles Hardwick, M.A., Fellow of St. Catharine's Hall, Cambridge, and one of her Majesty's preachers at Whitehall. The sermon was preached by Mr. Hardwick.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place:—*Preferd:* The Rev. John Latham, to the vicarage and parish of Lichfield Cat edral, &c. *Received:* The Rev. William Maule, to Eyeusbury, Buntingdon; the Rev. T. Trundle Storks, to Loughton, Essex. *Vicarages:* The Rev. George Aston, to Hordon-on-the-Hill, Essex; the Rev. Henry Barnes, to Faringdon, Berks; the Rev. Edward Blackburn Warren, to Marlborough Saint Mary, Wilts.

TESTIMONIALS.—The following clergymen have recently received testimonials of a similar regard:—The Rev. R. W. Sorsbower, head master of the King's School, Chester, from his pupils; the Rev. J. Sheffield, curate of the parish church, Rochdale, and master of the grammar-school, from the parishioners; the Rev. J. H. Moles, of Minster, from the parishioners; the Rev. William Gaskin, on resigning the head-mastership of Kendal Grammar-school, Duke-street, Grosvenor-square, from the pupils, the Rev. Octavius Arthur Hodgson, late officiating minister of St. Peter, Cheesehill, Winche ter, from the parishioners, and a second from the teachers and children of the Sunday-school; the Rev. George Peake, of St. Mary and St. John, Devizes, from the poor communicants; the students of St. Bees have presented to their tutor, the Rev. G. Lee Hamilton, a superb silver tea-kett e, richly chased, engraved with the college arms, Mr. Alger's arms, and the following inscription:—"In perpetuam benevolentiæ, reverentiæ, deaderin, memoriam Sancto Beato Collegii alumnorum ergo virum reverendum Georgium Hamilton, A.M., Artium et Sacræ Theologiæ Professorem, hic sobes argenteus ab hinc anno domini datus est, quinta die Decembris, A.D. 1851;" and an elegant silver pocket communion service. The Rev. John William Laycock, late curate of Bradford, has received a purse of sovereigns by some members of the congregation of Christchurch, Barmondsey, and other friends; a testimonial to the Rev. H. W. Semmes, late missionary of the S.P.G.F.P. in Southern India, from the congregation of the church at Hounslow, Middlesex, has been lately taken place.

THE CIVIC ELECTIONS.

Wardmotes were held in the City on Monday for the elections of Common Councilmen and other ward officers for the year 1852. In the greater part of the wards there was no contest, and the former members were returned to the Court of Common Council. The new Municipal Reform Bill, with its extension of franchise to all persons in the City paying an annual rental of £10, and Mr. Charles Pearson's plan for the formation of a general railway terminus, were the prominent topics discussed by the electors. In Broad-street ward Sir John Musgrove defended himself from the attacks on his conduct during his mayoralty. He expressed his indignation at the *ex parte* statements made in the Court of Aldermanity, and denied that he had ever been guilty of the impertinence of inviting her Majesty to the City; and he never asked a courtly Lord-in-Waiting to make the invitation. As regarded his visit to Paris, he considered the invitation as strictly private; and he was quite unaware at the time that other persons had been invited. He was asked, however, everybody that he should go as a private individual, unless the Corporation expressed a wish that he should visit Paris in state; and it was wise on their parts not to do so. When he was in the Senate house in Paris he had no first gone about with three servants, but on more than one occasion he had heard cries of "Aristocrate!" and on consulting the Préfect of the Seine (M. Berger), who accompanied him, the latter advised him to dispense with the guard for the future. The Alderman then answered *seriatim* the charges as to the want of courtesy, which he designated as puerile. He was recommended by his friends and to the electors to make any retractation in the matter of Admiral Parker, who had upheld the dignities of his office; he had sent out 8000 invitations, and he had received 7000 grants, from the highest down to the industrious classes; and on one occasion he had entertained 700 foreigners.

A special vote of thanks was passed to the Alderman for his explanation.

In Bishopsgate ward, Mr. Warren, sugar-broker, of Houndsditch, was elected, in place of Mr. A. Taylor, resigned.

In Castle Baynard, Mr. C. Hawkins was returned, in place of Mr. Corbin, retired. In Dowgate, Mr. George Fox, in place of Mr. Brown. In Queenhithe, Mr. George Kayment, in the room of Mr. Acocks. In the Tower District, Mr. H. N. Newson, in place of Mr. James Wylie, deceased. In Vintry, Mr. T. J. Warwick, in place of Mr. S. Lepard, resigned. In Bread-street, Mr. Cox was the only new candidate returned. In Farringdon Within, Messrs. Wheeler and Key were newly elected.

The contested wards were—Coleman-street, Aldgate, Billingsgate, Bridge, Candlewick, Cripplegate Within and Cripplegate Without, Langbourn, Portsoken, and the polls were taken on Tuesday. The new yeomanry were—

Mr. G. C. Graves, in place of Mr. W. Carling (Billingsgate); Mr. R. Osmond (Aldgate); Mr. W. Johnson (Bridge); Mr. Lodington, in place of Mr. Brander (Coleman-street); Mr. Lloyd (Cripplegate); Mr. R. F. Barnes and Mr. C. Sully (Langbourn); Mr. John Venables, in place of Mr. G. Vile (Portsoken).

A new police-station is to be erected within Hyde Park, close to Albert Gate, the Commissioners of Police to defray the expense thereof.

Wright, the steeple-climber, has finished his arduous and difficult task of affixing a lightning-conductor to the spire of the Assembly Rooms, Lanbargh, the greater part of the day being occupied in taking down the tackling. Several parties besides Wright successively ascended the steeple in the seat attached to the tackling; and at one time, while the seat was thus occupied, "Steeple Jack" accomplished his descent by sliding down a rope.

ROYAL ACADEMY PRIZES.

On Wednesday, the 10th inst, was held the 83d anniversary of the foundation of the Royal Academy of Arts. After the election of the various officers for the ensuing year, the President, Sir C. L. Eastlake, proceeded to the distribution of awards to the successful candidates in the several classes or schools of the Academy.

It is the custom of the Academy to give silver medals (accompanied with copies of lectures and discourses by former eminent professors) for the best productions in the classes of drawing and modelling from the life and antique, painting, and architecture; in addition to which, every second year, gold medals are given for the best original compositions in historical painting, sculpture, and architecture. We give Engravings from the works which were successful on this occasion.

The subject of the historical painting prize is "Delilah asking forgiveness of Samson." It has been well treated by Mr. W. S. Burton, in a symmetrical composition. The portions are agreeably arranged, giving due prominence to the principal figure, Samson, which is well drawn, and conveys the idea of immense strength, without coarseness or vulgarity of form; while in the strong man's countenance the expressions of both mental and bodily suffering are well combined. The other figures, together with the accessories—the rocky foreground, the rough old fir-trees, with their tangled and fibrous roots—are in harmony with the scene; while the calm surface of the sea forms an appropriate distance to the whole.

The group of prize sculpture, "Mercy interceding for the Vanquished," is a promising composition, though, perhaps, somewhat wanting in vigour. It is the production of Mr. C. Summers, who, though scarcely three years in the Academy, has also received silver medals for modelling from the antique and from the living model—a success which is sufficient evidence of his industry and talent.

The architectural composition, "A Design for a Marine Palace," is by Mr. J. Robinson. The plan comprehends a quadrangle of about 500 feet square, which is entered from the north, under an arcade flanked on either side by a campanile tower, the centre being laid out with fountains, statues, &c. The principal entrances from the quadrangle are under the east and west sides. The front shown in the View faces the south, and contains the state apartments, the west wing forming the Royal apartments; the other sides of the Palace are occupied by the apartments of the household, the chapel, the theatre, guardhouse, picture-galleries, museums, &c.

The design of the *façade* is in the Palladian school of Italian architecture. The semicircular terrace shown in the south front, facing the sea, has beneath it a covered arcade, the rusticated basement of which forms the sea wall. In the centre of the bay enclosed by the terrace the water flows through a bold arched way, forming under cover a state entrance to the Palace from the sea.

SCULPTURE.—"MERCY INTERCEDING FOR THE VANQUISHED."—BY CHARLES SUMMERS.

All were extremely gratified (says a correspondent of the *Builder*) to hear from the lips of the President of the Royal Academy, when the prizes were distributed, the compliment paid by Sir C. Eastlake to the talent of the unsuccessful architectural student, who missed the prize because he had not climbed to the top of Bow spire to measure the actual height of the uppermost feature of the composition. He said it was the unanimous opinion of all the architectural members, that a more beautiful set of drawings had never been submitted for the silver medal. The refusal of the Council was wise and just not to admit into the competition one who had not fulfilled the strict letter of the conditions—to make the drawings from actual admeasurement; and all must lament the want of energy, determination, and spirit which induced the student to fall short of his duty. It is said, however, that, by a curious chance, there was a great variety in the proportions of those who had measured the spire, and he was the mean between their extremes.

The following is the entire list of prizes:—

To Mr. William S. Burton—For the best historical painting, the gold medal and a discourse of the President West.

To Mr. Charles Summers—For the best group in historical sculpture, the gold medal and a discourse of the President West.

To Mr. John Robinson—For the best architectural design, the gold medal and a discourse of the President West.

To Mr. Francis Clark—For the best painting from the life in the Life School, the silver medal

To Mr. John Bagnold Burgess—For the best drawing from the life, the silver medal and the lectures of the Professors Fuseli, Howard, and Flaxman.

To Mr. George Edward Tuson—For the next best drawing from the life, the silver medal.

To Mr. James Luntley—For the next best drawing from the life, the silver medal.

To Mr. Charles Summers—For the best model from the life, the silver medal and the lectures of the Professors Fuseli, Howard, and Flaxman.

To Mr. John Thomas Christopher—For the best drawings of the tower and spire of Bow Church, Cheapside, the silver medal and the lectures of the Professors Fuseli, Howard, and Flaxman.

To Mr. James Rowley—For the next best drawings of the tower and spire of Bow Church, Cheapside, the silver medal.

To Mr. Henry Saxon Snell—For the next best drawings of the tower and spire of Bow Church, Cheapside, the silver medal.

To Mr. George Edward Tuson—For the best copy made in the School of Painting, the silver medal and the lectures of the Professors Fuseli and Howard.

To Mr. William Cooper—For the next best copy made in the School of Painting, the silver medal

To Mr. William Oliver Williams—For the best drawings from the antique, the silver medal and the lectures of the Professors Fuseli and Howard.

To Mr. Douglas Yeoman Blakiston—For the next best drawings from the antique, the silver medal.

To Mr. George Herbert Bacon—For the next best drawings from the antique the silver medal.

Which was concluded with an address from the President to the students.

The general assembly afterwards proceeded to appoint officers for the ensuing year, when Sir Charles Lock Eastlake was unanimously re-elected President.

HISTORICAL PAINTING—"DELILAH ASKING FORGIVENESS OF SAMSON."—BY WILLIAM J. BURTON.

ROYAL ACADEMY PRIZE.—ARCHITECTURAL DESIGN (MARINE PALACE).—BY JOHN ROBINSON.

Council.—*New List.*—Messrs. Thomas Creswick, Richard Redgrave, Francis Grant, and Charles Robert Leslie.

Old List.—Messrs. Philip Hardwick, David Roberts, Charles Barry, and Clarkson Stanfield.

Visitors in the Life Academy.—New List.—Messrs. Charles West Cope, William Dyce, Solomon Alexander Hart, Patrick MacDowell, and Richard Redgrave.

Old List.—Messrs. William Mulready, Daniel Maclise, Charles Rober Leslie, and Thomas Webster.

Visitors in the School of Painting.—New List.—Messrs. George Jones, Charles Landseer, William Mulready, and Clarkson Stanfield.

Old List. Messrs. Charles Robert Leslie, John Rogers Herbert, Solomon Alexander Hart, Daniel Maclise, and William Frederick Witherington.

Auditors re-elected.—Mr. William Mulready, Sir Richard Westmacott, and Mr. Charles Barry.

The next Annual Exhibition of the Fine Arts at Paris is to take place on the 15th March. Paintings, sculpture, &c., are to be sent to the Palais National in that city, from the 1st to the 15th February. The productions of foreigners will be received.—*Literary Gazette.*

Prince Albert and the Building Society of Berlin.—Prince Albert, having been elected honorary member of the Building Society of Berlin, has written the following letter, acknowledging the compliment, to the Prince of Prussia, the patron of the society:—"Your Royal Highness,—I have received the notification of the 26th of November, signed by your Royal Highness as patron of the Berlin Building Society, with great satisfaction, and thank you sincerely for the contents. I shall consider myself fortunate in being named a member of a society that has been so successfully active on a field that on this side the Channel has also been cultivated with so much activity for the advantage of the working classes, and for which I have for several years felt a special sympathy. If I can be of any use to your Royal Highness by communicating the results of the experience here made for the benefit of your society, I shall be most ready to do so, as well as to send specimens of building materials, or anything of the same kind that may be of use to the society. With sincere wishes for its success, I am, your Royal Highness's faithful cousin Albert. Osborne, Isle of Wight, Dec. 8 1851."

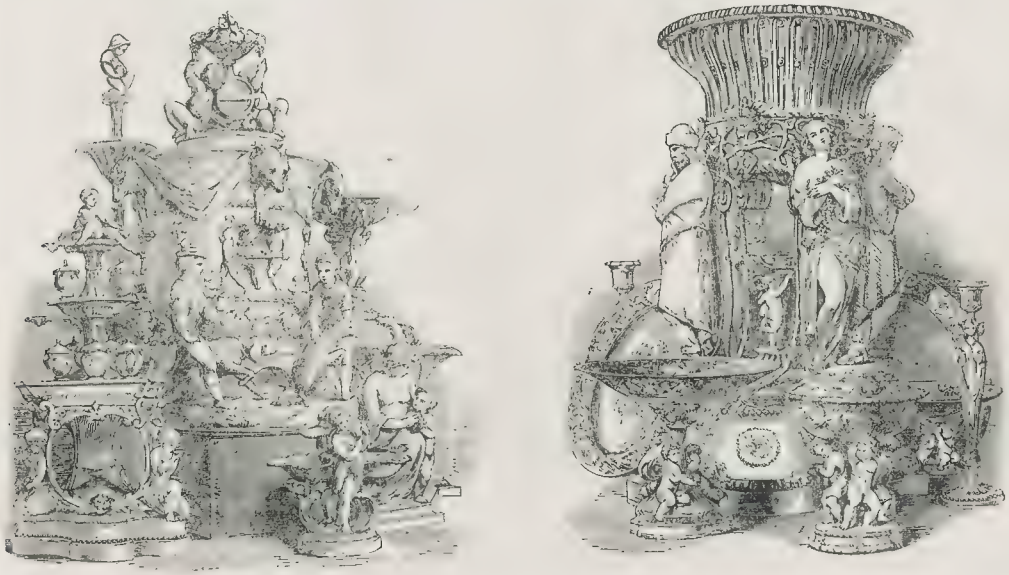
DESSERT SERVICE PRESENTED BY HER MAJESTY TO THE EMPEROR OF AUSTRIA.

Amongst the choicest of the productions of the English manufacturers of porcelain displayed in the Crystal Palace was a Dessert Service made by Messrs. Herbert, Minton, and Co., and which was purchased by her Majesty, as a present to the Emperor of Austria, in return for the magnificent books and bookcase given by the Emperor to her Majesty.

In our two Engravings are grouped the chief ornamental pieces of the Service. In our Engraving No. 1 the centre-piece consists of a wine-cooler, with figures of hunters, dogs, and hunting symbols round the body of the cooler, and the cover is ornamented with bacchanalian figures. To the right is a jelly or cream stand, and behind it are seen portions of an *assiette montée*; and on the left is an oval fruit-dish, with groups of figures on the pedestal; and in front of the stand, on which we have placed the wine-cooler, to show its details more clearly, is a salt-cellar, of very elegant design

In our second group, the tall piece in the centre is a flower-stand, supported by four beautifully-modelled figures representing the Four Seasons. In front of it, to the right, is a small *compotier*, or fruit-dish; and on the left is a pretty sugar or cream bowl, supported by figures of boys Slight ideas are also given of the plates which accompany the service Throughout the service the figures are all of Parian, slightly gilded, and the baskets and ornamental parts of richly but delicately coloured china, a combination of materials at once novel and exquisitely beautiful. In finish and tasteful character of design this Dessert Service has perhaps, never been surpassed.

Anglo-German Nobility.—"L'Almanach Imperial," for 1852 published at Vienna, has the following list of British subjects who hold (*relevent*) of the ancient Germanic or Holy Roman Empire:—Duke Albert Francis Augustus Charles Emanuel of Saxe-Coburg and Gotha; naturalised in Great Britain 12th February, 1840. William Basil Fielding, Earl of Denbigh; said to descend from a branch of the Imperial House of Hapsburg; a Count of the Holy Empire neither date nor patent extant. Henri Benedict Arundell, Baron Arundell de Wardour; a Count of the Holy Roman Empire; date of patent 1601. John Count de La Feld; naturalised in Austria; descends from the ancient Counts of the name in Alsace; his ancestor created a Count of the Holy Roman Empire after the battle of Zenta; date of patent 1697. George Spencer, Duke of Marlborough his ancestor created a Prince of the Holy Roman Empire, by the title of Prince of Mundelheim, in Suabia, after the battle of Blenheim; date of patent 1706 Jerome Count de Salis; naturalised in England; descends from the ancient Counts of that name in the Grisons. his ancestor created a Count of the Holy Roman Empire; date of patent 1748. Peter Leopold Louis Cowper, Earl Cowper; his ancestor created a Count of the Holy Roman Empire; date of patent 1758. Francis Taaffe, Viscount Taaffe in the kingdom of Ireland; naturalised in Austria; created a Count of the Holy Roman Empire; date of patent 1784 Horace St. Paul (Baronetcies). A Count of the Holy Roman Empire; date o patent 1786.



DESSERT SERVICE PRESENTED BY THE QUEEN TO THE EMPEROR OF AUSTRIA.

METROPOLITAN NEWS.

Cabinet Council.—On Monday last a Cabinet Council was held, at two p.m., at the Foreign Office. It was attended by Lord John Russell, the Lord Chancellor, the Marquis of Lansdowne, Sir George Grey, Earl Grey, Sir Francis Baring, the Earl of Carlisle, the Right Hon. Fox Maule, and Lord Seymour. The Right Hon. Henry Labouchere arrived in London from Nottinghamshire about an hour after the Ministers had assembled, and immediately joined the colleagues. The Council broke up soon after four o'clock. Lord John Russell left town, soon after the breaking up of the Cabinet Council, for Windsor Castle, to have an audience of the Queen.

Appointments.—Mr. Greenwood, Q.C., Recorder of Devonport, is appointed Assistant-Solicitor to the Treasury, in the room of J. M. Revell Reynolds, promoted to the chief office in that department. Mr. Accarrera Favale, now second paid *attaché* to the embassy at Paris, is promoted to the post of first paid *attaché* of that embassy, in the room of Mr Edwardes, appointed Secretary of Legation at Frankfort. Mr. Thomas Townshend, of Lincoln's-inn, is appointed as a supernumerary clerk in the foreign-office, is appointed to the clerkship rendered vacant in that office by the retirement of Mr. John Bidwell, after 50 years' service. The Hon. Massy C. Vivian is appointed to the clerkship in the Foreign-office vice Mr. Blackburn, retired on account of bad health. Mr. John Brown is appointed a member of the Council of Grenada.

Royal College of Physicians.—At the usual quarterly meeting of the Comitia Majora, held on Monday, the following gentlemen, having undergone the necessary examinations for diploma, were admitted members of the college:—Dr. Gerard, Harley-street; Dr. Wilks, Bethel-place, Camberwell; Dr. Bishop, Alfion-street, Hyde-park; Dr. Hassell, Park-street, Grosvenor-square. The President and Fellows have presented to George E. Blenkins, Esq., assistant-surgeon in her Majesty's 1st or Grenadier Regiment of Foot Guards, an elegant silver inkstand, with a purse of fifty guineas. The anatomical and pathological preparations bequeathed to the College Museum by that practical physician, Dr. Matthew Baillie, and mostly dissected and "put up" with his own hands, have lately been restored by Mr. Blenkins. On the inkstand is inscribed:—"To George E. Blenkins, Esq., in testimony of his skill, assiduity, and experienced judgment, in the execution of the delicate task reposed in him for the restoration of the museum (with a purse of fifty guineas), from the Royal College of Physicians, London.—Dec., 1851."

Institution of Civil Engineers.—Sir W. Cubitt, president, was in the chair at Tuesday's annual general meeting. The following gentlemen were elected to fill the several offices in the Council for 1852:—James M. Rendel, president; I. K. Brunel, J. Locke, W. P. J. Simpson, and R. Stephenson, M.P., vice-presidents; G. P. Bidder, J. Cubitt, J. E. Errington, J. Fowler, C. H. Gregory, J. Hawkshaw, J. R. M'Clean, C. May, J. Miller, and J. S. Russell, members; and J. G. Appold, and E. L. Betts, associates of council. The following medals and premiums were awarded:—Telford medals to Messrs. Clegg, Wyatt, Swinburne, Bruce, Hughes, Struvé, and Newton; and council premiums of books to Messrs. Glynn, Bidder, Bidwell, Locke, and Carr. Memoirs were read of the following:—The Most Noble the Marquis of Northampton, honorary member; Messrs. W. Brunton, G. B. Dalrymple, J. Farey, W. Mackenzie, and H. Renton, members; and Colonel Jervis, B.E., Messrs. S. B. Moody, J. H. Tasker, G. B. Thornewell, W. West, and J. Wilson, associates. The annual report of the retiring council specially dwelt on the late Great Exhibition, on the competing designs for the building, and many important points connected with the classification, which had emanated from members of the institution; and amidst the Royal commissioners, the building committee, their executive staff, and the jurors, many were to be found; even the designer of the present building, and those whose energies were so successfully devoted to the task of its construction, also belonged to the institution, whilst "the weight of responsibility, the arduous duty of supervision, the honour of acting as the master mind to which the requisites, to determine the design, and to govern the construction," were reserved for Sir William Cubitt, the president. The professional and scientific visitors from foreign lands received much assistance and information in their inquiries in this country; and it was confidently hoped that the relations with other countries might become more intimate, and that collective and individual benefit would be promoted. The completion of the library and organ was mentioned. Notwithstanding deceases and resignations, the number of members amounted to 716 of all classes, equal to that of any previous year, and far greater than the average. The thanks of the meeting were unanimously voted to the president and other officers of the retiring council. The next meeting will be on the 13th of January.

The Minister for St. James's, Duke's-place.—A special Court of Aldermen was held on the 20th instant, for the purpose of holding a conference with a deputation of the Officers and Clerks' Committee of the Court of Common Council, respecting the appointment of a clergyman to St. James's, Duke's-place, both the Courts of Aldermen and Common Councillors claiming the right of nomination. After a private discussion of two hours with the deputation, the Court of Aldermen resumed its sitting, and at the request the Lord Mayor to nominate the minister, and his Lordship having named the Rev. Mr. Whittemore, who has lately officiated, the court confirmed the appointment.

The New Houses of Parliament.—The statues of the Earl of Clarendon, Lord Falkland, and John Hampden will be put up in a few days in St. Stephen's Hall (the site of the old House of Commons). Workmen are now putting down the tiles on the floors of the new hall, of the approaches to the houses, and of the cloisters. The cloisters are to have stained-glass windows in antique style. They will be appropriated for the members' reading-rooms, cloak-rooms, &c. The public entrance will be in Westminster Hall, leading to St. Stephen's Hall. The members will have an entrance in the south-west angle of Westminster Hall to the cloisters, also by the former Speaker's porch. Peers and members will go in by St. Stephen's porch, opposite the Abbey.

Metropolitan Improvements.—It is stated in the last report of the Commissioners of Woods and Forests, that the commissioners have sold a piece of ground from Charlotte-street to Long-acre as a site for baths and washhouses for St. Giles and St. George's parishes. The parishes have paid £2650 for the site. The sum of £5000 has been appropriated by the Commissioners towards the expense of forming and completing a line of street between Southwark and Westminster-bridge. The Commissioners have sent £30 000 to the Westminster Improvement Commissioners to enable them to complete and open the new street from Westminster Abbey to Pimlico. The property purchased by the Commissioners of Woods and Forests to enable them to open a new street from the London Institution to Spitalfields Church amounted to £108 214, which has been raised by a duty of 1d. per ton on coals imported into the city of London.

The Late Great Exhibition.—The admission of visitors has been greatly restricted since the Building came into the hands of the contractors, who have assigned the removal of goods by a notice that rent would be charged from the 10th inst., and that they would not be responsible for loss or damage. The admission of foreigners, and of persons who were ill or abroad during the time the Exhibition was open, has been confined to the western half of the Building, no person except on business being allowed to pass the foreign boarding. The process of clearing out has been slow, but it is expected will be finished by the end of the year.

Sale of Exhibition Goods.—On Monday a second sale of Exhibition goods, belonging chiefly to the French and Zollverein sections, came off at the auction-rooms of Mr. Thomas, in Leadenhall-street. The sale did not seem to excite any very particular attention, the buyers present being few in number. An eight-day striking clock, with figures and mechanical singing-birds, by Bontems of Paris, was bought in at £21. There were two others exhibited in the Crystal Palace, which were sold to have been purchased by the Queen and the Duchess of Sutherland, at £40 each. The splendid Sèvres china vases, which were so much admired in the Exhibition, and are amongst the finest and largest of the kind ever manufactured at Sèvres, were purchased by Mr. Chester for £220. The catalogue stated that they cost upwards of £500. The "Education of Maria," a painting on copper after Rubens, by Sch eidinger, was knocked down at 15½ guineas. Four other paintings of the same description by different artists produced about £6 each. A splendid Sèvres china vase, which was so much admired in the Exhibition, and are amongst the finest and largest of the kind ever manufactured at Sèvres, were purchased by Mr. Chester for £220. The catalogue stated that they cost upwards of £500. The "Education of Maria," a painting on copper after Rubens, by Sch eidinger, was knocked down at 15½ guineas. Four other paintings of the same description by different artists produced about £6 each. A splendid equestrian group, representing the death of Charles the Bold, produced £17 10s.; Mr. Chester was the purchaser. A bronze of "Marius contemplating the Ruins of Carthage" brought £7 15s. A model of a sloop-of-war by Irmler of Lorpen, which was said to have gained a council medal, fetched £24. Two handsome embroidered shawls sold for £5 each, and a of the smaller articles realised fair prices. The sum realised on the day's sale was about £728.

Influx of Shipping.—Exactly 100 ships from foreign ports, which have been more or less detained in the docks of the Channel, or farther out to sea, on their passage home, were reported at the Custom-house on Monday as having arrived in the docks and river with cargoes of foreign merchandise, including some from the East and West Indies and China, North and South America, and almost every part of the globe. The influx of shipping has caused a great deal of bustle and activity at the great dock establishments.

Ship Launches on the Thames.—On Tuesday an iron steamvacht for the Pasha of Egypt, 220 tons, was launched from the building-yard of Messrs. Mare and Co., Orchard-wharf, Blackwall. The dimensions are—length between perpendiculars, 285 feet; length of keel for tonnage, 256 feet; length of keel for tonnage, 40 feet; depth in hold, 20 feet; draught of water, 18 feet. She will be propelled by machinery of 800-horse power, by Maudslay, Field, and Co. She is pierced for the following number of guns:—Spar deck, 12 10-inch 84-pounder broadside, 16 cwt.; spar deck, 12 8-inch 84-pounder pivot guns, 85 cwt.; main deck, 14 10 inch 32-pounder broadside guns, 56 cwt. Gunpiece ed ostensibly for a yacht, she can be turned into the most powerful steamer of her class afloat. Her appearance on the water after the launch roused the most sanguine expectations of the Pasha's agents. The second vessel was the *Lady Jocelyn*, screw-steamer, built for the General Screw Steam Company, and intended for the mails to the Cape of Good Hope. Her dimensions are—length between perpendiculars, 240 feet; ditto of the keel for tonnage, 216 ft. 6 in.; breadth for tonnage, 39; depth in hold, 23; draught of water, 17ft. 6in.; draught of water, 19 feet. The engines are of 300-horse power. She is also pierced for 32 32-pounder broadside guns (56 cwt.) and 2 10-in. in pivot guns (85 cwt.) The third launch was from the yard of Messrs. Green, of a ship called the *Challenger*, designed to compete with the Yankee ca ers. Mr Mare gave a toast to the directors of the great steam compa country at the London Tavern in the evening, including Mr. Hankes N R Cabin Maudslay, Mr. Green, Penning and the Admiralty compelled them to contribute to the fir list of steamers one vessel constructed of iron.

Metropolitan Commission of Sewers.—A special court was held in Greek-street on Wednesday; Mr. E. Lawes in the chair. Present Sir John Burgoyne, Major Dawson, Captain Veitch, and Mr Allason. It was agreed that the list of the new officers appointed at the reduced scale of charges should be published. The balance in the hands of the treasurer to the 24th inst. was £4446 6s., from which sum the quarterly salaries of the officers of the commission would be deducted. A deputation of the inhabitants of Peckham waited on the commission, praying for relief from open ditches, and offering to contribute to a new line of sewer. The surveyor of the district will be instructed to inquire as to the amount of contribution, and the chairman remarked that their operations would be greatly facilitated if those who suffered from want of sewers were to advance the necessary funds.

South-Western Railway.—Another stormy discussion took place at the general meeting of the proprietors on Tuesday to consider the merits of the two schemes to run to Exeter: the one by the central line, via Basingstoke and Salisbury, and the other by the coast line, via Dorchester. The report of the committee appointed at the former meeting to investigate the two plans pronounced in favour of the coast line, and recommended the completion of a single line between Basingstoke and Andover. The supporters of the central scheme was condemned. On this report a most animated debate ensued. The motion that it be received and adopted was met by an amendment by Mr. Raikes Currie, M.P., that the directors should be requested to give the report their full consideration; and that they should also consider Mr. Locke's proposal for a central line, which was, to find half the capital, the directors to provide the other half, with the option of hereafter taking the shares at par. The amendment was lost on the show of hands, but it was agreed that a poll should be taken next Monday and Tuesday both on the motion and amendment, a general meeting to be held on the 31st to hear the result.

Mutual Freehold Land Scheme.—A public meeting took place at the Manor Rooms, Hackney—Charles Gilpin, Esq., in the chair—on the 19th inst., to promote the objects of this institution. Messrs. E. Clarke, Rowton, and Mr. Whittingham, the secretary, stated the nature of the scheme to prove the profitableness of the undertaking, as well as its social, moral, and political advantages.

The Guy's Hospital Improvements.—The extensive new buildings at Guy's Hospital are progressing very fast towards completion, covering an immense piece of ground at the rear of that ancient institution, extending from the mouth of Maze-pond, S. Thomas-street, to King-street, Snow's-fields. The contractors. The noble building is erecting on patent principles, with immense iron rafters and girders, and, when completed, will be capable of accommodating 300 additional in-door patients. The basement floor is intended to form the new library, the museum, reading-rooms, lecture-rooms, anatomical theatre, &c.

Practising Touters.—A discussion took place in the Court of Aldermen on Saturday last, on the report of the inquest of the ward of Castle Baynard, complaining of the obstructions caused in the approaches to Doctors' Commons by the touters of the proctors catching hold of claimants under wills, and capturing ladies in the streets to obtain business. The matter was referred to the alderman of the ward (Wilson), to be disposed of according to his judgment.

Penny news-rooms, fitted up with convenient reading-tables, &c., and containing journals, magazines, reviews, &c., have been opened in various parts of the metropolis.

Christmas Dinner at the Leicester-square Soup Kitchen.—Upwards of 10,000 poor persons and children of the ragged schools in the metropolis were entertained on Christmas-day to a dinner of roast beef, plum-pudding, &c.; a number of noblemen, gentry, and tradesmen having liberally contributed money or provisions; the wholesale grocers in the City sent in tea, coffee, sugar, pepper, mixed biscuits, raisins, spice, &c.; bakers and butchers forwarded bread, flour, and meat; cheesemongers, bacon, cheese, &c.; fruiterers, nuts and oranges.

Christmas Eve.—On Wednesday the parochial authorities of the metropolis and the suburbs distributed the customary gifts to the poor population. In Kensington the charitable poor received the bounty of the Duchess of Kent, in coals, meat, bread, blankets, and warm clothing. In Kew the Duke of Cambridge gave to the distressed a substantial dinner of roast beef and plum-pudding, as also a supply of coals. In Hampton and Bushy the usual gifts to the poor were distributed. At Windsor and Eton the residents of Laundry were busily engaged in giving away meat, bread, potatoes, coals, oatmeal, blankets, warm clothing, shoes, women's clothing; and the Ladies' Association in Southwark, consisting principally of the Society of Friends, were equally active in the task of benevolence. At the soup-kitchen in Leicester-square there were large demands for relief. In St. Martin's-in-the-Fields, St. Mary-le-Strand and the Precinct of the Savoy, St. Clement Danes, St. Paul's, Covent-garden, Marylebone, St. Pancras, Islington, St. George, Hanover-square, and in many districts within the city boundaries, the comforts of the poor inhabitants were attended to, fuel and clothing being largely distributed.

The Late Fire at Camden-town.—The immense loss sustained by Collard and Collard, by the fire of the 19th, induced all the numerous skilled workmen in their employment to hold a meeting on Wednesday evening, at the Stanhope Hotel, Camden-town, to express their sympathy with their employers. The chair was taken by Robert Adams, Esq., of Regent-street. After several remarks highly complimentary to Messrs Collards as employers, a deputation was appointed to wait upon those gentlemen, to communicate the resolutions that were adopted, and a subscription was entered into for the purpose of affording some compensation to those workmen who had lost all their tools, and were not insured, when a sum exceeding £100 was subscribed in the room. Among the names announced as subscribers were Messrs. Collard, £21; Messrs. Broadwoods, £10 10s.; Mr. R. Addison, Mr. Murphy, Mr. Hart, Mr. Stewart, Mr. Rowell, Mr. Arnold, £5 5s. each; Mr. Thomas, £4; Smith and Sons and Mr. G. Helste, £3 3s. each. A number of others afterwards came to that the members for the borough. Lord Dudley Stuart and Sir Benjamin Hall, be solicited to contribute to the same.

Fire in Aldersgate-street.—Early on Wednesday morning, soon after eight o'clock, a fire broke out in the extensive premises belonging to Mr. Burbidge, the distiller, in Aldersgate-street. The flames originated in the stables. It appears that William Hunt, the stableman, was engaged in "damping" a still charged with 1269 gallons of wash, 10 over proof, and 1000 gallons of spirit between 300 and 400 gallons, suddenly overflowed, and the spirit, running into the furnace, became ignited, causing the contents of the larger still also to take fire. The stillman was unable to escape by the doors, and made his escape from the building with some difficulty. A good supply of water having been obtained, the fire was got under before it communicated to the adjoining buildings. The damage is roughly estimated at from £2000 to £3000. The stock and the premises are insured.

Fire.—On Monday morning, about four o'clock, a fire of a destructive character broke out on the premises of Mr. Ashford, reading at police-constable, raging on the ground-floor. The engines having arrived, a plentiful supply of water was obtained and thrown upon the burning premises, which were nearly destroyed before the firemen got a command of the flames. During the progress of the fire two of the brigade men mounted the upper portion of the steamer to get a better command of the flames, and while they were in the performance of their duties Mr. Ashford, carelessly passed over, and fell to the basement of the building. Mr. Fogo, the acting inspector, and several firemen rushed to their assistance, and immediately extricated the poor fellow, who fortunately only received a few bruises in consequence of his fall. They were taken to the London Hospital, but were able to leave shortly afterwards. Mr. Ashford was fortunately insured, but the origin of the fire remains a mystery.

Births and Deaths.—From the official returns for the whole of the metropolitan districts, it appears that the births registered in the week ending December 6, were 1,662 males, 783; females, 672: total, 1455. Deaths during the same period:—Males, 693; females, 642: total, 1335. The unfavourable state of the public health is still indicated, as, since the middle of November, the weekly deaths have been in succession, 1132, 1279, 1315, 1194, and now 1293. Influenza, in the week ending the 13th of December, 1847, caused the mortality to be 1946; but, if the deaths of that fatal week be excluded from the comparison, it is shown that the average number of deaths in the corresponding weeks of 1841–50 was 1040, which, if corrected for increase of population, is 1166. On this corrected average, last week's return exhibited an excess of 40. The table of fatal causes indicates that two classes of diseases, the zymotic or epidemic, and that which comprises affections of the respiratory organs (exclusive of consumption and hooping-cough), predominated, causing the deaths to be 261 in the former, and 252 in the latter, almost the same amount in each. Scarlatina as last week. Measles was fatal in 105 cases, and pneumonia in 110 cases, being above the average. There are 180 cases of consumption recorded—an excess of mortality, the average being 158. The corrected weeks no more than 120. Asthma carried off 18 persons, and pleurisy 5. Collectively, the diseases of the respiratory organs display a decrease, but epidemics maintain a more uniform rate of mortality, being only 1 less and 1 more than usual at this time, the deaths in the last three weeks being 249, 243, and 261. 35 children and 3 adults have died of smallpox, 22 children of measles, 25 of hooping-cough, 17 of croup, 5 of thrush, 2 of remittent fever, 41 persons of scarlatina, 19 of diarrhœa and dysentery, 5 of influenza, 30 of typhus, including fever, 5 of erysipelas. Of the 38 smallpox cases 27 were males, and 11 females; in three cases vaccination had occurred recently, in 3 others had been unsuccessful, and in 16 the fact is doubtful, the return in the registration being imperfect. The description given of premises as "close, crowded, and undrained," explains the existence of fever and typhus in many places. Four persons paid the penalty of intemperance by their lives. One expired of burns received in consequence of intoxication, another died of exposure to the cold, no less than 7 children are suffocated in bed, and one perished from drinking hot water. The wife of a labourer was found dead from starvation.

Meteorological Observations.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 inches on every day of the week except Saturday, on which day it was 30.13 inches. On Monday 30 300 inches, and it gradually decreased till Saturday, when it was 29 540 inches. The mean of the week was 30.158 inches. The mean temperature of the week was 41·9 degrees, which is nearly the average of corresponding weeks. The daily mean was 36 degrees on Thursday (or 4 degrees below the average); it rose on the two following days to 47 degrees and 49 deg. (or 7 and 9 degrees above the average). The wind was calm during the early part of the week, and in the south towards the end.

COUNTRY NEWS.

COLLIERY EXPLOSION.—LARGE LOSS OF LIFE.

A frightful explosion took place on Saturday morning last, at the Colliery of Warren Vale Pit, Rawmarsh, near Rotherham, Yorkshire, the property of G. S. Pollard, Esq., of Osberton, and worked by Messrs. J. and J. Charlesworth, the lessees of many collieries in the Yorkshire coal district.

A few minutes before seven o'clock the whole neighbourhood was astounded by an eruption like that of a volcano from the mouth of the pit. Two carves which were being drawn up out of the pit were at once projected upwards and lodged in the gearing over the shaft. A shower of coals, stones, and other matters had played near the pit mouth were compelled to take shelter under the platform, of the tipplers for loading the carts; and it was only by this precaution that they escaped fatal injuries. The country all around the pit was blackened to a distance of three quarters of a mile by the dust and smoke.

As soon as it was possible the damaged gearing of the shaft was repaired, so as to enable men to descend the pit, which is 127 yards deep. By half-past nine fourteen persons had been got out alive, but all more or less injured. These had been enabled, after the explosion, to make their way to the bottom of the shaft, and await themselves of the first opportunity of ascending. Up to half-past three there had been extricated 54 persons alive, and 15 dead bodies. Of the living, 15 had happily escaped sufficiently well to be able to render assistance and information. Nine were so severely injured that it is feared several of them cannot recover, as they have only been dreadfully burnt, but sustained fractures and other injuries of a dangerous character. Altogether 49 dead bodies have been recovered, some of them so dreadfully mangled that they could scarcely be recognised. It is thought that two or three bodies still lie buried in the pit.

The supposed cause of the accident is the fall of a portion of the roof of the pit, stopping the usual current of ventilation, liberating a large quantity of foul air, and forcing it into the parts where the colliers were working with candles.

The colliery consists of two pits near together. The deeper pit, of 127 yards, works the nine-foot seam. The other pit, 90 yards deep, works the five-foot seam. These two pits are connected by a shaft through the five foot seam down to the nine-foot—an air furnace being connected with the shaft of the five-foot pit, so as to create an up-draught. The explosion took place at the northern part of the workings of the deeper seam, but communicated by the shaft with the upper seam.

COMBINATION AND THREATENED TURN-OUT OF OPERATIVE ENGINEERS.

The well-paid and numerous body of workmen, known as mechanics, millwrights, and engineers, and principally employed in the construction of machinery in Lancashire, have entered into a combination, which is understood to extend almost, or entirely, over the kingdom; the objects of which, so far as they are avowed, are set forth in an address, purporting to be from "the members of the Amalgamated Society of Engineers, Machinists, &c., to the employers." In that address the workmen are represented as demanding that, for the future, no men shall work overtime, except in cases of accident, and then to be paid double wages; and that piece-work shall be entirely discontinued, a course which would have the effect of putting the idle and the industrious, the skilful and the unskilful, on the same footing. In order to ensure success to the movement, an attempt is making to concentrate the entire force of the combination upon one establishment, in the hope that the united resources of so large and important a body of workmen as the machinists and engineers of Great Britain will be found irresistible by any firm, however opulent. A notice has been given, therefore, by Messrs. Hibbert, Platt, and Sons, of Oldham, that the workmen in their very large establishment will leave their employment on the 31st inst., unless certain de mands are complied with, the first of which is expressed in the following terms:—

That in future, all planing, shaping, and boring machines be worked on or by mechanics or apprentices, to be taken up by them as they become vacant. That the labourer at present employed on such machines be put on to the fitting-bench before Christmas, 1851, with a view to change all the machines in that establishment; but if any of the above machines cannot be changed, the machines otherwise become vacant, the vacancies shall be filled by mechanics as they occur.

The Lancashire employers, knowing that the intent on of the "amalgamated society" is to attack them in succession, have determined to make common cause with the Messrs. Hibbert, Platt, and Sons, of Oldham, that the workmen in their own particular establishment will leave their employment at

PRESENTATION TO THE MAYOR OF SOUTHAMPTON.—On Thursday last week, a public testimonial, in the form of a service of silver plate, valued at 400 guineas, raised by voluntary subscriptions, was presented to Richard Andrews, Esq., the Mayor of Southampton. The subscribers numbered 1500, and many of them belonged to the working classes.

A MIDLAND OBSERVATORY AT NOTTINGHAM.—At a special meeting of the Nottingham town council, on Monday, a communication was read from Mr. F. J. Lowe, M.R.A.S, enclosing a letter from Mr. Henry Lawson, of Bath, in which that gentleman offered to transfer his valuable collection of astronomical, meteorological, and optical apparatus, to be treated with by the council for forming a midland establishment or observatory for the promotion of meteorological and astronomical science, on condition that a sufficient sum be raised to buy or build a house, with grounds, &c., for a resident observer, the council to allow such person an annual income suitable to his position and requisite knowledge—say £200 a year—and to provide for the repairs and improvements which may from time to time become advisable. Mr. Lawson also offered, in addition to the donation of the instruments, which cost upwards of £10,000, to contribute 1000 guineas in furtherance of the object. The Mayor (Mr. Falkin) observed, that Nottingham was regarded as a most desirable place for the erection of a midland observatory, from the town council had not the power to vote the funds necessary for the purpose. It was, however, unanimously resolved, on the mot on of Mr. Alderman Heard, that Mr. Lawson's handsome offer be accepted, provided the requisite sum be raised by public subscription. A committee was also appointed to devise means for carrying the project into effect.

IRELAND.

THE DUBLIN PROTESTANT ASSOCIATION have issued the following announcement:—"Great Meeting of the Protestants of Ireland.—The committee of the Dublin Protestant Association hereby give notice that a great meeting of the Protestants of Ireland, to adopt steps to secure the repeal of a late ordinance, creating the Roman Catholic College of Maynooth, will be held in Dublin under the highest auspices, previously to the opening of the next session of Parliament. Edward Groggan, Esq., M.P., will take the chair."

CATHOLIC DEFENCE ASSOCIATION.—The election of Mr. Wilberforce (brother of the Bishop of Oxford) to the office of secretary to the Catholic Defence Association has created quite a schism in that body; Mr. Keogh, M.P., Mr. Moore, M.P., and others of the Irish members having published a protest against the choice, as being anti-national. The Roman Catholic primate, Dr. Cullen, has endeavoured to heal the breach in a letter of consolation to Messrs. Sadlier, Reynolds, and Keogh, M.Ps., who had acted as honorary secretaries during the formation of the society. Dr. Cullen says:—"From the first formation of the society I understood the leading to be universally entertained that all Catholics of the United Kingdom were to constitute one body and to be in all respects upon a perfect equality, without distinction of province or country. Thus, as far as I could judge, was decreed a royal principle, and the one best calculated to advance the interests of our holy religion. Charity, and truth, and union among all Catholics of the empire appeared to be the basis upon which our proceedings and combined efforts were to rest. Bearing with me the impression of this avowed principle, I was strengthened as it has been by an intercourse with several members, both lay and clerical, of the association, I was not prepared, I must confess, for the exception which has been taken to the selection of so distinguished a person as Mr. Wilberforce to the office which was to be filled. Were the association founded for local or merely political purposes, I would subscribe to the justness of the exception. When, however, it is borne in mind that its objects are to embrace the Catholic empire, every question arising should be decided upon religious and catholic grounds."

IMMIGRATION AND EMIGRATION.—The *Limerick Reporter* notices an extraordinary feature in the history of emigration. It appears that, while thousands are leaving their native shore for the land of the West, there are vast numbers returning to Ireland; and it is added, that scarcely a ship leaves New York that does not bring 80 or 100 persons homewards. The Irish flock in hordes to the markets at the other side of the Atlantic are not, it seems, altogether agreeable to some of our countrymen. The *Clare Journal*, on the other hand, says:—"The rise of emigration is increasing fast every day in this neighbourhood. There are about twelve families leaving the small parish of Kilfenora next month, consisting of about sixty in number."

NAVAL AND MILITARY INTELLIGENCE.

INSPECTING-GENERALSHIP OF CAVALRY.—The only appointment vacated by the brevet which has yet been decided, and that prospectively, is the inspecting-generalship of cavalry. Major-General the Duke of Cambridge and Lieut.-General Brotherton, but will not assume the appointment until next spring.

DRAFTS FOR THE CAPE.—The authorities at the Horse Guards have issued orders for detachments of all the regiments now serving at the Cape of Good Hope to be in readiness for immediate embarkation to join their respective service companies.

INCREASE OF TROOPS.—It is understood, that, in consequence of the recent serious disturbances in the forests at the Cape of Good Hope, not less than 5000 men will be required early next year, to enable the military authorities to carry out the system of rebels.

MASTERS' ASSISTANTS IN THE NAVY.—A new circular has been issued to the Admiralty relative to masters' assistants. Its provisions are as follows:—They are to be limited in entry to such number as the board may find necessary. They are to be examined previous to entry at the Naval College. No candidate must not be less than twenty nor more than twenty-two years of age, unless selected from the merchant service, when the age is to be extended to eighteen, if he has served two years at sea. He is to pass the same examinations as a naval cadet, with the exception of mathematics, and will be required to understand the practical use of the sextant and the mode of keeping a ship's reckoning by working a day's work, and obtaining the latitude by observation of at eighteen; he will be required to understand the use of the rating, navigation by chronometers, the variation of the compass, and explain the mode of rigging lower masts and bowsprit, and the more simple evolutions of working a ship under sail; he must serve three years at sea after he has passed for second master, and then may undergo an examination before his captain and senior lieutenant. Masters' assistants who at serving are to be allowed the benefit of the naval instructor laws of charges. The master of the fleet to instruct them accordingly. On he ng paid off the masters' assistants will be entered in a guard-ship for such time as the Admiralty may direct, or until selected for another appointment, provided they possess good certificates, and are recommended by the commanding officer. When they have completed their regular period of servitude, and passed for second master, they will be placed on the navy list in that rank, and, when employed, have the pay and commission of the ship; but they will not be eligible for promotion to master until they have served two years further as second master. When passing temporarily abroad in navigation and seamanship they are to be rated as acting second master, as it appears the whole service will be eight years before being eligible for promotion to master—three years before passing the first examination, three years after passing it, and two years when passed and rated as second master.

On Monday a detachment of 120 men of the 48th regiment, at Portsmouth, commenced a three weeks' course of instruction in the great gun exercise on the ramparts, and under the tuition of the Royal Artillery. It understand that this instruction is to be given to the troops of the line in all garrison towns.

SURVEY ON THE COAST OF AFRICA.—Her Majesty's steamer *Pluto* is about to be despatched to the coast of Africa, to commence the survey of the Bight of Biafra from the point at which Captain Denham concluded his operations in her Majesty's ship *Argus* a few years ago.

NEW PENAL COLONIES.—It is said that the Lords of the Admiralty have given directions for the immediate equipment of two vessels to proceed upon an exploratory expedition among the South Sea Islands, including New Caledonia and the Fejees, with a view to ascertain the capabilities they respectively offer for the purpose in question; and the fine clipper brigs *Herald* and *Arrow* are destined for this service, and that Captain Mangles Denham has been appointed to command the intended expedition.

APPALLING SHIPWRECKS.—The annexed reports of vessels lost were announced at Lloyd's on the 20th inst.:—The American packet-ship *Tyendenoga*, on her passage to London from New York, was totally lost on the morning of the 8th of December, on sunken rocks off the Corrigon Islands. The total loss of passengers and crew drowned is reported to be 27. Two shins were run down and totally lost in the Channel on the night of the 16th. The *Theodora*, a large Dutch barque, from Batavia, bound for Amsterdam, from Batavia, struck at 9 o'clock in the evening, when some 25 miles below the Eddystone, steering up Channel, was met by the *Corinthian*, also a barque, nearly of the same tonnage, Captain Spencer, from Hull, bearing downwards. By some misunderstanding or neglect of keeping "a look-out," they came in contact with each other, and with such tremendous force that the *Theodora* filled and went down. The sudden and unexpected blow left scarcely sufficient time to get the boat out. Happily the whole of the crew were saved. The *Corinthian* sustained very considerable damage; she was compelled to put into the nrst port, and reached Plymouth on the night of the 18th with the crew of the sunken vessel on board. The second run down was the *Diedrow*, from Sweden to Cardiff. One of the crew went down in her, and unhappy perished. The collision took place about ten miles from Dornum. The remainder of the crew were rescued by the vessel which came into collision with the *Diedrow*, the brig *Minnet*, belonging to Hamburg. On the 8 nt of the 19th a large vessel, having on board 250 em-grants, from Bremen, bound for New York, was seen ashore on the Goodwin. A number of Deal and Margate luggers were off the wreck, taking on board the helpless passengers, who were brought off in boats. The vessel's fate is not mentioned. From other sources we learn that she is likely to become a wreck. There are three other losses mentioned. The most serious was that of the *Lilla*, of Liverpool. She was found to be on fire on the 3rd inst., in lat. 43 35 deg., long. 45 deg. North ng could be seen of the crew.

ACCIDENT TO SIR DAVID BAIRD.—We are sorry to learn that Sir David Baird, Bart., of Newbyth, met with a serious accident while hunting on Saturday with Lord Elcho's hounds. Sir David had, we understand, dismounted to remove some obstruction in a fence, when a stake struck his horse and caused him to fling, and the blow falling on Sir David's leg broke it. He was removed to Marchmont House.—*Kelso Mail.*

FAMILY COLONISATION SOCIETY.

By the Overland Mail letters have been received from Captain Chisholm, honorary secretary of the society, giving an account of his proceedings since his arrival in South Australia. The plan of the society was warmly approved in Australia. The Bishop of Adelaide called on him, and, finding he was out, nailed his card to the door, and so did every one of the influence in the colony. A committee was formed for South Australia, which, included the Bishop of Adelaide, the Roman Catholic Bishop, the ministers of the Scotch Church, the Free Church, and the Wesleyan Methodists, four members of Council, and the managers of the Bank of Australasia and the Union Bank of South Australia.

As the emigrants by the first ship will not be here before the end of March, Captain Chisholm, and several legal bepon before due to make weekly repayments of the loans advanced to them for their passage. Most of the young girls were comfortably married, and hastened to show their sense of the assistance they had received from the society. The Governor and the Attorney-General have taken measures to facilitate the society's operations. In the course of a fortnight sixty-two colonists of the number commercial farms, treasure, and on the 6th inst. and by Mrs. Chisholm in London, in a very short time money will be sent from the labouring class of emigrants in Australia to pay the passages of their relations in England, as steadily as from the United States.

The Family Colonisation Society was first publicly established under the chairmanship of the present Earl of Shaftesbury, then Lord Ashley, on the 11th May, 1849; but Mrs. Chisholm, its founder, had been promoting the reunion of families divided in Australia and this country for two years previously.

Since 1850 the society has sent three ships containing eight hundred souls, equal, according to the Government regulations, to six hundred adults, to South Australia and to Port Phillip; to these parties they have advanced £1700 towards their passage-money; the balance, amounting to £1700, the emigrants themselves have paid, chiefly by small weekly instalments. But they have been of the labouring class, and not one of them has ever run into debt with 10s. each. Already a number of wives have been restored to their husbands, and children to their parents. Excellent rules are adopted for protecting young women on the voyage. At the present time, with the assistance of a loan of £2000, the society are in a position to send 1000 emigrants before the month of June, and to increase that number in the course of the year to 5000 adults.

The whole expenses of the society for clerks, advertising, printing, rent, fitting a group committee-room, twenty three small and large public meetings, several of which were attended by more than 1000 persons, postage (answers to emigrants' inquiries being £1 a week) have been under £300. For £250 a year the machinery is equal to sending off 50 0 emigrants a year.

It is worth noting, that, while with a loan of £1 a head Mrs. Chisholm is able to obtain any number of eligible English emigrants willing to pay their own passage, the Government Commissioners cannot get em grants to accept an offer of a free passage. The emigrating classes have no confidence in Government emigration. They like civil treasurers, and dislike arrangements for their wives and daughters on board ship. The dearth of labour in Australia is fearful; wages will keep at £20 (not £40) a year, with board and lodging, for shepherds. Those who are interested in the colony will do well to encourage a self-supporting system of emigration like Mrs. Chisholm's, which renders the stream perpetual without Government assistance.

NEW BRIDGE FROM FULHAM TO PUTNEY.—A company has been formed for the purpose of obtaining from Parliament authority to construct a new and commodious bridge over the Thames, connecting Fulham and Putney, in lieu of the old and present structure, which is dangerous to passers, hazardous client for ordinary traffic, and an unsightly as well as a perilous and vexatious obstruction in the navigation of the river. The proposed bridge will consist of wrought and cast iron, spanning the river at a distance of 120 feet each, and of sufficient height—viz. 20 feet, the present bridge being only 12 feet—for vessels to pass under at high water, so that no such impediments as now interfere with their progress and endanger the safety of the craft.

A NUT FOR GEOLOGISTS.—Hiram de Witt, of this town, who has recently returned from California, brought with him a piece of the auriferous quartz rock, of about the size of a man's fist. On thanksgiving-day it was brought out for exhibition to a friend, when it accidentally dropped upon the floor and split open. Near the centre of the mass was discovered, firmly embedded in the quartz and a lightly covered with gold, the perfect shell of a nutpany nail. It was entirely straight, and had a perfect head. By whom was that nail made? At what period was it planted in the yet uncrystallized quartz? How came it in California? If the head of that nail could talk, we should know something more of American history than we are ever likely to know.—*Springfield (U.S.) Republican.*

THE MONASTERY OF MOUNT ST. BERNARD, LEICESTERSHIRE.—The abbot of the monastery of Mount St. Bernard has issued the following letter to the editor of a local paper:—"The Abbot of Mount St. Bernard's presents his compliments to the editor of the *Nottingham Mercury* and begs through him to inform the public that there will be no more pigs sold by private hands. He is very sorry to have to state that some have abused the kindness shown them, by not behaving with that respect to which the establishment was entitled. The abbot regrets very much to be forced to take this step, but only by this means can he answer the numerous inquiries addressed to him, and prevent the many impositions to which he has been subjected. Should, however, any person call at the monastery in future will be in favour of those who have business or particular introductions. St. Bernard's Priory, Dec. 6, 1851."

AGE OF TREES.—The "Hethel Thorn," so well known to many Norfolk people, is on a farm now the property of that munificent patron of historical literature, Mr. Hudson Gurney, by w om it was purchased from Sir Thomas Beevor. The first Sir Thomas always resided at Hethel, and built the house of 1691, and odd, as a boundary, under the appellation of the "Old Thorn." It is stated, also, that it is mentioned in some chronicles as the thorn round which a meeting of insurgent peasantry was held during the reign of Henry VIII. Upon inspection of its branches, which are all hollow tubes, as heavy as iron, is most curious; and, although the tree is certainly diminished of late years, it still puts out leaves and berries vigorously.—*Norwich Mercury.*

NEWS OF THE "VIOLET'S" CREW.—It is ascertained that Captain Layton, master of the *Violet* (the vessel destroyed by the Bir pirates), is alive, and has recovered from his wounds. Two of the crew have died of cholera in captivity, and the survivors have been bought from their captors by our consulate under 4000 dollars ransom for each. Their place of captivity is unknown and no things have been heard whether E. B. Cross, Esq., owner of the vessel, is alive or dead.

ROYAL PANOPTICON OF SCIENCE AND ART.—The space on the east side of Leicester-square ong vacant is now being covered with a building for the Panopticon of Science and Art. The plain of the building comprehends a grand central hall, 97 feet in diameter, for the exhibition of models, machinery, manufactures, works of art, &c., and for exhibitions of various descriptions. There will be a lecture-room, laboratory, &c. All the buildings are designed in the Saracenic style, although they will chiefly from the existing remains at Cairo. The contour of the dome is taken from a Daguerreotype of a dome at Cairo. It will be formed of glass and iron on the ridge and furrow principle. The whole will be heated by hot water.

AN EGYPTIAN MODEL FARM.—Among the passengers who went out in the *Rupon*, which left Southampton on Saturday last with the Indian Mail, was Mr. Le Sells, the English farm bailiff of the Pacha of Egypt. He took out a number of cows and bulls, a large flock of goats, pheasants, &c., to stock Abbas Pacha's farm. The farm, which is to be cultivated as much as possible after the English fashion, is 3000 acres in extent. The cows taken out in the *Rupon* were of the Ayrshire breed, and the finest we have seen of the finest sorts that could be obtained in England. A large quantity of live farming stock is still to be sent to Egypt from this country to complete the Pacha's arrangements.

JEROME BONAPARTE AND HIS DINNER BILL.—It is to be lamented that the bill of the supper given by Jerome Bonaparte, on the evening of his nomination as King of Westphalia, by Napoleon I., has not another friend, at the Palais Royal, has not been preserved. When the repast was over, and the bill presented, his Majesty found that neither himself nor his guests could muster enough to settle it. In this dilemma the host was summoned, and the difficulty explained to him. He asked the name of the waiter, but when the two functionaries announced themselves as the chamberlain and librarian to the King of Westphalia, the host, thinking it a joke, said, "I suppose you will tell me next that your fat companion is the King of Westphalia?" "I am," replied the newly appointed monarch. But the landlord, believing he had to do with a set of rogues, declared they should retain their pretensions to the guard; upon which a scuffle ensued, in the course of which the waiter was thrown over, and the trio were scarcely out of the house when the *restaurateur* discovered the Imperial cipher on the watch, and flew with it to the commissary of police. The commissary posted to the *préfet*, the *préfet* to the Minister, and the Minister to the Emperor. The next day his Majesty of Westphalia departed to enter on the government of his kingdom.—*Fraser.*

TRADITIONS FROM OLDEN PERIODS THROUGH FEW LINES (Vol. ii. pp. 206, 237).—"My greatest boast in this line is, that I have conversed with Sir Isaac Herd, the celebrated Herald, and he and conversed with a person who was present at the execution of Charles I."—Lord Campbell's *Lives of Chief Justices*, vol. ii. p. 304, note. *Notes and Queries.*

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

Christmas week is usually characterised on the Stock Exchange by the absence of its leading members, and limited amount of business. Notwithstanding the Presidential *coup d'état*, the present week has very much resembled its predecessors, nor has the additional important fact of the resignation of Lord Palmerston more than momentarily affected the general dulness. The opening price of Consols on Monday was 97 to ¾ ex. div., being ⅛ in advance of the closing quotation of the preceding week. After receding to 96⅞, the telegraphic wire reported an advance of ⅛ per cent. on the French Rentes, causing Consols to close firmly at 97⅛. On Tuesday the opening price was 97 to ⅛, but quotations yielded, and 96⅞ became the closing figure. Upon the accession of Lord Palmerston from the Ministry becoming known on Wednesday, Consols receded to 96⅜; but the Government broker purchasing on behalf of the Sinking Fund afforded support to the Market, and 97 ex div. has been since quoted. Thursday before Christmas-day was observed as a strict holiday in all the markets. In Railway and New Three-and-a-Quarter per Cents about an average business has been transacted. The Unfunded Debt and India Bonds remain at the previous quotations. The office at list at the close of the week's business reported the prices of the Funds open as follows:—Consols, 96⅞—97 ex div., for the Opening; Reduced, 97½; New Three-and-a-Quarter per Cents, 98½ to ⅝; Exchequer Bills, 49s pm.; Long Annuities, 7 1-16.

There have been numerous transactions in the Foreign Market during the week, but the operations have been generally limited. Mexican has advanced to 27, but has since declined to 26½. Sardinian has touched 85, closing, however, at 83½. Brazilian on Monday was done at 95½; to-day quotes 95. Peruvian Five per Cents have ranged from 90½ to 91. Spanish Five per Cents have ranged from 20½ to 21. Three per Cents are (nominally) 40¼; Dutch Four per Cents, 89½ 90; and Two-and-a-Half per Cents, 59½.

The Railway Market has been flat, and at the close of the week, although less depressed, is not recovered its buoyancy. Closing quotations are—

ORDINARY SHARES AND STOCKS.—Aberdeen, 10½; Ambergate, Nottingham, Boston, and Eastern Junction, 8½; Caledonian, 19½; Eastern Counties, 6⅜; East Lancashire, 10½; Great Northern, 10½; Ditto, Half-new A, 9½; Ditto, Halves B, 13½; Great Western, 86; Lancashire and Carlisle Thirds, 6¾; Lancashire and Yorkshire, 58; Leeds, Northern, 14½; London, Brighton, and South Coast, 95; London and North Western, 100; London, Chatham, and Dover, 4¼; London and South-Western, 84½; Manchester, Buxton, and Matlock, 2⅜; Midland, 67; Newmarkets, 8½; Norfolk, 21; North British, 7½; North Staffordshire, 5½; Shrewsbury and Birmingham, 23; Ditto, Shrewsbury Union, 3; South-Eastern, 91; York, Newcastle, and Berwick, 19½; Ditto Extension, 13; York and North Midland, 22½.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 23½; Leeds and Bradford, 101½; London and Greenwich, 12; Ditto, Preference, 24; Wilts and Somerset, 92½.

PREFERENCE SHARES.—Aberdeen, 1½ dis.; Caledonian, 7¼; Great Northern, 5 per Cent., 18¾; Ditto, Redeemable, 6¾; Great Southern and Western (Ireland), 7½; Manchester, Sheffield, and Lincolnshire, No. 1, 11½; Ditto, New (£10), 12½; Midland (Consolidated 3rd-rol and Birmingham), 33¾.

FOREIGN.—Great Indian Peninsula, 5½; Luxembourg, 3½; Namur and Liege, 6½; Northern of France, 16½; Orleans and Bordeaux, 5½; Paris and Rouen, 25¾; Paris and Strasbourg, 14½; Rouen and Havre, 9½.

THE MARKETS.

CORN EXCHANGE.—During the present week very moderate supplies of English wheat have been received up to our market, coastwise and by land carriage; nevertheless, the demand for all kinds of grain has ruled very inactive, at nearly Monday's prices. The imports of wheat from abroad have been trifling; boiled samples have changed hands freely, at nearly the quotations; but our millers have purchased sparingly. Grinding barley, for the most part, has been in good request, at full prices. The malting trade has ruled dull. Inquiry for oats has been moderate, at late rates. Beans and peas have met a dull inquiry. Norwich and Yarmouth barley, 22s to 23s per quarter; Chevalier, 24s to 25s; Scotch, 22s to 23s; Irish, 21s to 22s; Kingston and Ware, 24s to 25s; Chevalier, 26s to 27s; Hertford and Hadham, 24s to 25s; Chevalier, 26s to 27s; Maldon, 24s to 25s; Chevalier, 26s to 27s; Peterborough and Lincoln, 22s to 23s; Chevalier, 24s to 25s; Yorkshire and Lincoln, 22s to 23s; Chevalier, 24s to 25s; Scotch and Irish, 22s to 23s; Chevalier, 24s to 25s; Stockton and Yorkshire, 22s to 23s per 250 lb. *Foreign:* American flour, 19s to 22s per barrel; French, 37s to 38s per 280 lb.

The Seed Market has ruled exceedingly dull, at barely former quotations. Linseed and rapeseed continue in fair request, at full prices. In all other seeds very little business is doing. Cakes are quite as dear as last week.

Linseed, English, sowing, 60s to 62s; Baltic, crushing, 45s to 47s; Mediterranean and Odessa, 45s to 46s; Bombay, 38s to 39s per quarter. Rapeseed, 32s to 33s per cwt. Brown mustard-seed, 7s to 8s, white ditto, 6s 6d to 7s 6d. Tares, 8s 6d to 4s per bushel. English rapeseed, new, 44l per last of 2520 per last of 10 quarters. Linseed cakes, English, 6l 10s to 6l per 1000; ditto, foreign, £6 to £6 5s per ton. Rapeseed cakes, £4 2s to £4 4s per ton. Canary, 45s to 47s per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 6d to 6½d; of household ditto, 4½d to 5d per 4 lb loaf.

Potato and *Fruit* Markets.—Potatoes, in fair request, at late rates.

Teas.—For sound kinds, although the deliveries continue good, the demand is heavy, and prices are barely supported. Common sound congous, 9½d to 10½d per lb. Fine and fine flavoured ditto, 11½d to 12½d; good ditto, 13d to 14d; medium ditto, 15d to 16d; good strong ditto, 17d to 18d; fine ditto, 19d to 20d; finest ditto, 21d to 22d. Common sound souchongs, 10½d to 11½d; fine and fine flavoured ditto, 12½d to 13½d; good ditto, 14d to 15d; finest ditto, 16d to 17d. Pekoe, 18d to 20d. The stock is 46,000 chests, against 38,000 chests last year.

Sugar.—Our market still rules very inactive, and sale rates are barely supported. Fine low grocery qualities are to be had at 38s to 39s 6d; fine white ditto, 37s to 38s; middling ditto, 35s 6d to 36s 6d; good bright ditto Madras, 30s to 34s 6d; yellow ditto, 33s to 34s; good yellow Havannah, 34s to 34s per cwt; duty paid. Refined goods steady, at 44s to 46s 6d for low to fine grocery.

Coffee.—Mocha has further receded in value 1s per cwt. Good ord. native Ceylon has changed hands, at 44s per cwt. Other kinds are dull, and 1s to 2s per cwt. cheaper.

Rice.—Prices are barely supported. Common sound sorts are dull and slow sale at full prices.

Spices.—Pepper is dull in sale, at 3½d to 4d. Pimento, 6½d to 7d. Cassia lignea, 25s to 26s. Ginger, 30s to 32s per cwt. Cloves, 3s 6d to 4s per lb. Nutmegs, 2s 10d to 3s 6d per lb. Mace, 2s 6d to 3s per lb.

Provisions.—Irish butter is dull in sale, at late quotations. Carlow, Clonmel, and Kilkenny, 84s to 86s; Limerick, 82s to 84s; Cork, 80s to 82s per cwt. Foreign, in moderate request, at 87s to 87s 6d per cwt. In other kinds we have very few transactions to report.

Bacon.—Fine kinds rule steady, at 5s 3d to 5s 4d, and Leewards, 4s 10d to 5s per cwt. Hams, 6s to 7s per cwt. Brandy is quite as dear, with a good demand. British-made lards firm, at 5s 6d to 6s per cwt. Foreign, 4s 6d to 5s per cwt.

Coals.—Lawrence, 15s 6d; Cowpen, 15s 3d; Hetton, 15s 6d; Lambton, 15s; Stewart's, 17s 6d; Hay, 14s; Whitwell, 15s 6d per ton.

Tallow and *Oils.*—Monday, £3 12s to £3 15s 6d, clover ditto, £3 8s to £4 4s 6d; and straw, £1 1s to £1 6s per load. Trade dull.

Tallow.—The general tone of the market is steady, at late rates.

Oils.—Linseed oil is in good request, but sellers are firm. Rape continues very inactive. Other oils are in a dull state. Cocoa-nut is quiet, yet bodies are firm.

Wool.—Owing to the holidays, scarcely a transaction has taken place in this market.

Potatoes.—Secondsort samples are in fair request, at 70s to 80s per ton. In other kinds very little is doing. Kent ditto is quiet.

Smithfield.—The general demand has rul h heavy, at drooping prices:—

Beef, from 2s 4d to 3s 8d; mutton, 3s 10d to 4s 6d; veal, 3s 6d to 4s 6d; pork, 3s 8d to 4s 8d per 8 lb.

Newgate and Leadenhall.—A very large business has been doing this week at comparatively high prices:—

Beef, from 2s 4d to 3s 8d; mutton, 3s 8d to 4s 8d; veal, 3s 6d to 4s 6d; pork, 3s 6d to 4s 8d per 8 lb, by the carcase. MOST. HERBERT.

GYPSEY EXPERIENCES.

BY A ROUMANY REI.

CHAPTER III.—MY FIRST AND LAST GYPSEY HUNT.

I STOOD where Sinfi had taken leave of me, and watched the caravan till her bright shawl disappeared round a turn of the green lane. I flattered myself she looked round just before she vanished. And then, when the lane was still and lonely again, I turned my face towards Cambridge. "The King's Hedges," I have said, end abruptly in the fields, from which the road is divided by a low quickset fence. I was making a gap in it large enough to let me through, when I was pulled up by a gruff voice, which exclaimed in the true nasal *twang* of Cambridgeshire—"Neow then, where are yeou a geowing teow?" It was the farmer, who didn't relish my unceremonious way of dealing with his young quickset. I explained, as satisfactorily as I could, that as it was obvious I must get out of the lane, it was perfectly clear I must trespass on his enclosures. He tried to set me right on that point, by recommending that I should go round by the Linton-road—an addition of some three miles to my walk—which, as the sun had now set, I had no inclination for. However, by dint of discussion, we became better friends, strange to say; and at last our reconciliation was so complete, that he showed me round to a gate which led into his homestead, and thence guided me, without interfering with his fences, or trampling down his young wheat, to the high road. I told him of my Gypsey encounter, and learned from him that the lane was a regular camping place for these people; that he had nothing to complain of from them, and that if they stole fowls and ducks, and killed sheep, it certainly was not in the neighbourhood of the camps, where suspicion was sure to fall upon them, and where the discovery of a cock's feather or a duck's foot would certainly be proof enough, in the eyes of a couple of county magistrates sitting in petty sessions, to justify a summary committal of the

"I COULD STAND IT NO LONGER—I RAN TO THE SCENE OF CONFLICT. ALL WAS OVER—KEANE AND HIS BRAVE ARMY HAD ACHIEVED A COMPLETE VICTORY."—DRAWN BY F. W. TOPHAM.

gang as rogues and vagabonds. We parted company at the road. I proceeded quietly to college, supped, slept, and dreamt I was making wonderful progress in Roumany under the tuition of Sinfi.

Two days after, however, I had ceased to think much about Gypseys, being by that time deep in preparation for our annual college examination, which was close at hand, and with the importance of which I was duly impressed, as a decent and sober freshman ought to be. On the third day, I was disturbed in a struggle with Müller's Dorians, by a rap at my oak, which was sported as befitted the time and my great resolves. "I won't open," thought I. The knock was repeated, peremptorily. It was clearly some one determined to come in. I had no duns then, and few "rowing" acquaintance, so on the third summon I opened. The intruder was a stranger, a mild though determined-looking man, of middle age, quietly dressed, but with a sporting "something" in his style and manner which told me at once he was neither a town touter for orders nor a Cambridge tradesman. He told me in a few words that he was a superintendent in the London detective police. That he had been ordered down from town in consequence of a robbery of sovereigns, to a large amount, from a farmer's wife in Huntingdonshire.

The robbery had been perpetrated by two young Gypsey women, and had not been discovered by the victim of it till the morning before my visitor's call upon me.

"I've not lost any time, sir," he told me, with a sort of quiet pride. "We seldom do. I've been looking up all the camps in these parts, and I think I'm on the right lay at last. But you must allow me to ask you a few questions."

"Certainly," I said.

"I've been told by Mr. —— (my farmer of "The King's Hedges"), that you were in company with some gypseys near his place on Wednesday, who decamped the same day."

"Yes."

"Do you know their names?"

"Smith Euri Smith, Athalah Smith his wife, and Sinfi Smith, their niece."

He nodded. "Exactly; and two girls, called Florentin and Morella—strappers, one with a red and green tartan shawl, and a yellow handkerchief on her head; the other with a cloak, striped brown and green, and a blue and crimson handkerchief under a black beaver bonnet?"

The description was exact.

Two such girls, I told him, had come up, just before I parted company with the family.

"And now, sir," he said, "try and tell me what time it was, as near as you can; what direction they came from, and what passed."

I told him, as exactly as I could, not forgetting the mysterious *Bori Hokani*, which had stuck in my memory.

He struck his hand on his knee as I repeated the words. "I thought so," he said, after a moment; "that's my lot, as sure as skittles. And there were no other men there, but this Euri?" he continued, after another short pause.

"None; nor did I hear them talk of any."

"In course not, sir," he said, with a half smile; "in course not. And now, sir," he added, with an apologetic look at my open books, "if you could give me an hour, sir, I should like you to go with me as far as that camping place."

I hesitated at this proposal, I confess; for it seemed a sort of treason to my Gypsey acquaintances.

As if he had read the motives of my hesitation, he went on, "The fact is, sir, I only want to be taken to the exact spot; or we shall have some work to find the *pattran*."

"The *pattran*?" I said, interrogatively.

"Ah, I forget you aint up to the things, sir. The *pattran*, sir, is the Gypseys' way of letting their friends know which road they've taken. There were two men belonging to that camp, sir, who hadn't come in when they started, and they are safe to have left 'em the *pattran*. So if you *could* take a bit with us, sir—"

I confess I felt some curiosity to see how it would all end; and the prospect of a Gypsey-hunt was exciting. Besides, I had no intention of being in any way accessory to its *dénouement*, beyond honestly telling all I had seen; and I fancied it might be better for Sinfi that I should be on the spot, if the chase should end in a capture.

Accordingly I intimated to Mr. Keane my readiness to accompany him not only to "The King's Hedges," but as far as he liked to take me, filled my cigar case and a pocket flask of cognac,—and proceeded in his company to the Bishop's Hostel gate, where his "trap" as he called it, was in waiting. This was a light but strong spring-cart, with a wiry little mare between the shafts; and which, I found, was to carry, besides ourselves, two sergeants of the Cambridge police, who had been placed by the magistrates at Mr. Keane's orders, and who evidently looked up to their London brother with the greatest respect. We rattled off briskly for "The King's Hedges," and on the way Mr. Keane explained to me the mysteries of the "*Bori Hokani*," and the "*pattran*," as follows—

"You see, sir, these here Gypseys are a rum set, and have their own dodges and lurks, quite different from our London cracksmen, or the yokels either. The men don't do much harm beyond making bad money, and a little sheep-slaughtering, and a deal of horse-jockeying, and such like—nothing to speak of. It's the women that does the great strokes of business. They're uncommon knowin' at it, to be sure, and gets in with ignorant servant girls, and such like, and works the arter-sneak, under the stall (cover) of fortune telling, and love-charms, and such like. But of all their dodges, there's none they swag as much by as the *Bori Hokani*, as they call it in their patter—'the great trick,' that means, as I'm told, sir; leastways it *is* a great trick, and this is the way they works it. They'll get round some old farmer's wife, sir, in an out-of-the-way place, when they knows there's money kept in the house for there's many of them farmers as wouldn't trust the Bank of England with a sovereign—and when the husband's out of the way, they sticks it into the poor ignorant woman, as how they can make money breed money, all along of a charm they've got. So they indooces the ignorant woman to let 'em put up her husband's sovereigns for her, which they does safe enough in a parcel, and gives it her, and makes her lock it up in a drawer, or a chest, or such like, and says some gibberish, and acts some games over it, and tells her that in such and such a time if she opens the parcel she'll find two sovereigns for one. But don't you see, sir, they had another parcel with 'em, made up just like the one they've packed the sovereigns in (and that's why they always puts it up themselves), filled with lead dumps, or such like, and by a fakement—I beg your pardon, sir—a sleight-of-hand like, you know, they change the packet of sovereigns for the packet of lead fardens, in giving on 'em up to put into the box, and they walks their chalks with the tin; and when the old lady opens her box, and unfastens her parcel to look for her young canaries, you know, sir, she finds the blessed dumps, and precious aggravated she is, in course, and her husband too—for he's safe to find it out—and that's the *Bori Hokani*, sir; and those two limbs of girls as came up when you was at the camp, sir, they'd been all that identical day down near Alconbury Hill, and they'd nailed nigh upon eighty pound at that game I've told you; and that's what I'm arter, as I said in your room, sir."

I anxiously inquired how far he supposed the rest of the tribe were implicated.

"The old 'uns is safe to be afore the facts in it," he said; "as for the others, we'll see when we nails 'em. Leastways, I shall grab the lot, I know," he concluded, with a pleasant look to his provincial associates, who agreed with him in this, as in everything.

By this time we had reached the scene of my first Gypsey lesson, which had not promised so exciting a catastrophe. I pointed out every locality as exactly as I could. The detective listened as if he was rivetting every word in his memory, with a thump of his determined will, and when I had concluded, thanked me, and said quietly: "Now for the *pattran*;" and he looked at his provincial assistants with a calm consciousness of superiority. It was evident they hadn't the remotest notion what *the pattran* might be.

"Ah! I forgot, you ain't up to that. Look here—and you too, sir, if you like, for every pair of eyes is useful sometimes—the *pattran* is the Gypsey's road-mark. They can track each other over all England by it. This is it—when they takes a turn right or left (and they goes uncommon queer roads to be sure) either they make a cross in the road-way, if it's a place where there ain't much traffic, and the ground suits, with their nailed shoes—not planting the marks, mind, close together, so that you'd see 'em with half an eye, but careless like, here and there. If it's a cross, with the long end pointing the way they've took. But it ain't always that, by no means. Sometimes it's a branch broken down to an angle, and pointing to their road; sometimes it's a rag stuck on a bush at the corner they turn; sometimes a wisp of straw as you'd think had been caught up out of a farmer's cart passing with a load—but there's a knot in it that *they* know, and that *I* know (*he said this with a chuckle*), for I was put up to the game by an old chap as had been a Gypsey himself, leastways he is one still, but don't travel, for he's turned respectable, and does a putting up job for us now and then. And now that you knows what the *pattran is*,"—he said to the provincials, with the same careless consciousness of mastery which marked all his communications with them,—"perhaps you'll just open both your eyes uncommonly wide, and help me to pick it out hereabouts."

"But," I suggested, "how do you know they have left one?"

"Ah! There was them girls' two brothers as hadn't come up when they started: they were safe to leave them 'the Roumany card;' that's what we calls it, you see, sir."

While he spoke he had guided us to the lane end; and now began a very exciting bit of *back-woodsmanship*. Keane quested and cast about like a hound, now with his nose close to the ground, anon peering with all his eyes into the hedge, carefully avoiding any touch that could displace a twig or scatter a pendent straw. His companions, at a long distance, of course, followed his example as they best might. I was absorbed by the London detective, who worked like a bloodhound, while the provincials might have been turnspits. At last Keane "pointed." I can give no other name to the dead set with which he suddenly stopped transfixed. I hastened up and found him gazing intently at an insignificant looking bunch of grass that hung on a low bush of elder, some ten yards from the end of the lane, and which I should have certainly passed twenty times without noticing it, even after his description of the marks to be looked for. "That's it," sir, he said, pointing to the bit of weed with the same noiseless chuckle which I had before observed was his expression of self-content. "Look here, my lads," he added to the admiring "yokels," who had now come up. "Now you'd say that was a bit of natural grass, that had been flung up there in hedging-up: but look here," and carefully removing the bunch from its twig, he showed us three hairs in it, the largest in the middle. "That's a Roumany mark, that is, and they have taken this road; so on we goes again," he said merrily, as we remounted the spring-cart and rattled along the road, which, luckily for us, was straight for nearly a mile, with no turn that did not end in a farm-steading or a dung-heap.

"But how the deuce are you ever to come up with them," I asked, after we had trotted along for some minutes, "if it is to take you as long at every turn as at that?"

"Ah! If they was continually a-running away from us that would be all werry true; but don't you see, sir, when they've put forty mile or so between them and these parts, they'll take it easy, for they're a lazy sort, and don't like fast travelling, when they can help it, anyhow. It ain't often as they have one of *us* arter 'em, or they'd maybe not be so easy about distances."

"Will they travel at night?"

"Not arter the first night, sir; it don't suit 'em, and the *mokes* (donkies) ain't equal to more than thirty mile a day, good going. I don't fancy, somehow, they're more nor sixty mile ahead of us, sir; and the mare has covered more nor that between light and dark many a time. To be sure, that *pattran* is 'ockerd."

And so we jogged along, at a swinging trot of some eight miles an hour, Mr. Keane enlightening us as to the detective dodges, of which he had an apparently inexhaustible repository, which the provincial policemen drank in with a strong professional as well as personal relish.

We had by this time left the highway, and were on abominable cross country roads. Every now and then we pulled up at a divergence of tracks, sometimes coming to a puzzling place where three roads met. At every such point we made a cast for the *pattran*, with more or less success as to time, but always recovering our clue before we left the spot. I had by this time got so interested in this novel kind of hunting, that I had quite forgotten my qualms of conscience, and picked out the *pattran* more than once, eliciting a tempered commendation from Mr. Keane, which was enough to give me great value in the eyes of the provincial functionaries.

We had now been about six hours on the road: and as we had started at twelve, we could not look for more than two hours and a half, at most, of such light as we wanted.

The provincials had already turned the conversation, more than once, on the subject of supper and quarters for the night. But Mr. Keane did not condescend to notice these low material wants while there was business to be done and daylight to do it by.

It might have been between seven and eight o'clock, and we had made, stoppages included, some four-and-twenty miles—for our little mare's frequent rests enabled us to put the steam on, when we did get a bit of unbroken road that permitted it—when we pulled up at a place where not three, but five roads converged. Keane looked annoyed.

"Not an hour's light afore us," I heard him mutter; "and five of these blessed *droms* (roads) to choose from—owsomever;" and he swung out of the cart, and made his cast without more grumbling, assigning to each of us a road, and taking two to his own share.

We had worked for a quarter of an hour without success, when a shout from one of the "locals," as Mr. Keane called them, drew us in his direction. We found him on all fours, with his nose almost flattened among the ruts.

"There, Mr. Keane, sir," he said, in an excited manner. "'Ere's the cross, sir."

There *was* the cross, sure enough, marked in the dust; and now the only point to determine was along which road pointed the long arm.

"D—n the fellow," Keane blurted out, after a few minutes' careful observation. "If he hasn't been down among the tracks, and a rubbin' on 'em out all round, with his confounded 'ands and knees; and now, for all I can see, both arms is the same length!"

The unhappy local looked as if he would have fainted on the spot. Here was a dilemma,—two tracks to choose from, and night coming on.

Keane was down in the dust again, at a wary distance from the foot-prints, however, evidently working out the most complicated sums in mental arithmetic and mensuration. We watched him intently.

"By George, it is!" he cried out at last, after an anxious ten minutes, springing to his feet and slapping his thigh. Then, seizing me by the arm, he forced me down, almost on to my nose, exclaiming, "Look 'ere, sir,—there's nails, eh!" He clearly disdained any appeal to the locals after this performance of one of them.

I ventured the opinion that they certainly were nails, but that I could not say they belonged to gypsey shoes.

He chuckled, after his fashion. "You'll excuse *me*, sir, but don't you see they've square 'eads, and are only four of a row."

I looked closely, and verified the fact.

"That's a Gypsey shoe, sir; they have their own makers, and their own ways of planting their nails. Bless you, it's another of their dodges. There's never a clod would think he was 'alf spragged with four nails in a row. But the Gypseys wants a light shoe, as well as a strong shoe, and never carries more, and always square 'eads. That there's a Gypsey shoe-sole, sir, and thus here's our road."

Although I felt his argument might be contested, there was that quiet conviction in his tone which always carries the day: and there was not a doubt or dissenting murmur among us—none audible at least—as we remounted the cart, and "sprung" the lively little mare down the rough road in a style that did equal credit to her and the cart springs.

By this time the night was gathering in, and it was evident to me that our tracking could not be carried on perfectly any longer. We clearly ought to be drawing near our quarters for the night. Yet I saw no public—nor indeed any signs of habitations. I was quite out of my latitude, and hadn't the least idea where we were. I ventured to ask Mr. Keane his opinion on this point, as we pitched along.

"Well, sir, we are in Huntingdonshire, that's certain; and so far as I knows, somewheres between Old Hurst and Wirboys."

"You know this country, then?"

"Well, sir, not to say know it, as I does Essex, and Middlesex, and that way; but I was down hereabout after them Mepal burglars, you know, sir, (I hadn't any notion what he alluded to, of course)—and I've a good eye for a country; and if we *are* where I fancies we are, you may make up your mind to camp out to night, sir."

"Oh, I'm quite game for that," I said, rather rejoicing in the prospect, for the fun of the thing.

"But hollo! what's this?" said my companion, as the mare, turning a sharp corner, came to a dead stop before a stout gate.

Keane jumped down, flinging me the reins, and ran to the gate.

"Well, I am blessed!" he ejaculated in a tone of deep disgust, after taking his observation. "Here's the road pulls up short—nowhere, like—it don't carry into that field."

"Then this wasn't the right line after all," exclaimed, with considerable satisfaction, the unhappy "local," who had made, and mirred, our last *pattran* discovery.

Keane turned sharp round and looked about him, as if about to speak, but checked himself; and proceeded again to the gate.

An old and ragged black-thorn grew out of the hedge close to it.

Suddenly, and before I was aware of his intention, I saw Keane on the gate, plucking something from one of the lower branches of the thorn—it was now too dark to discern what. In a moment he was at my side

"Look here, sir," he said, holding up a little fragment of stuff; "what d'ye make of that?" Looking more closely, I saw it was a bit of silk of a yellow and crimson pattern—a light flashed upon me—it was a tatter of my own *cushgar poshnikes*—of the blazing bandanna I had presented three days before to Sinfi!

And now arose a struggle of conscience—ought I to tell Keane what I knew of it, or not?

The doubt was momentary. I told him.

He gave his quiet chuckle, and said, "Well, now, I was a thinking something of the sort, sir."

Then turning to the luckless "local," he added, "So you see, mister, I was right after all." He then opened the gate, and led the way through.

Beyond the gate lay, not a field, as we thought, but a common.

Keane did not remount, but stood with his elbow on the mare's reeking flanks, "ciphering," as a Yankee would say.

After a few minutes he came up to me and said, "It ain't no use going on in the dark, sir, with our work; so we may as well look out for a sheltered spot; tilt the cart, let the mare graze, and make ourselves comfortable."

There was nothing very formidable in a night out in the merry month of May, though the common *was* rather a bleak bedroom.

"We'll find shelter from the wind to the lee of some of them there bushes," said Keane, as he walked forward a few steps to reconnoitre the ground. He ascended, for this purpose, a small eminence a few yards in front of the cart. All of a sudden I saw him stop short, and gaze long and steadily into the waste. He then came back to the cart, and said in a voice that, for the first time that day, betrayed excitement, "By God, sir, I believe we're close upon 'em."

I jumped up in the cart, and so did the "locals."

"Be quiet," he said, peremptorily. "I don't know, but there's a fire down yonder," pointing towards a straggling thicket of thorn that fringed a broken hedge, about two hundred yards in front of us. "I smell wood-smoke."

The wind set from that quarter, and I thought I smelt it too.

"What do you propose?" I asked.

"Why, first, we'll stalk 'em, sir," he said, renewing his old tone; "and if they're our lot, we've got 'em as safe as darbies can make it."

"Shall I go with you?"

"No. Here, back the cart into the lane again, and keep close—all of you till I come back."

We obeyed his orders, and then I saw him, bent double, creep forward till the gathering dark swallowed him up.

The ten minutes he was absent seemed an hour.

"It's them; by George it's them!" he whispered, almost hoarsely, as he came back to us, in the same cautious fashion in which he had left us. "And the two lads are with them, and they're playing cards over their fire."

"Let's go in on 'em at once," said one of the "locals."

Keane winked quietly.

"Not if I knows it, mister; weazels and Gypseys always are best catched asleep. Let them get under the blankets first. And now, as we know where we are, let's make ourselves snug, sir."

As he spoke, he lugged some horse-cloths and rugs from under the cart seats, and distributed them to us, while he set about carefully rubbing down the gallant little mare, and gave her her supper out of a nose-bag.

This operation over, he addressed himself to our comforts. Bread and cheese were not wanting, nor a gallon stone bottle of beer. One luxury he positively prohibited,—a cigar,—for, as he jocosely observed, "The wind *may* change in a jiffey, and blow the smoke and us both to them gents," and he jerked his chin in the direction of the Gypsey camp.

It was useless trying to sleep. I had no intention of taking part in the actual capture, but I listened with interest as Keane detailed his plan of attack to his local coadjutors. They were all three armed with pistols, besides their staves; but Keane was most positive in his injunctions to the provincials not to use anything more deadly than oak, unless they found it absolutely necessary in self-defence.

The night wore on slowly. Keane crept away from time to time to reconnoitre, but my Roumany friends kept it up unusually late that night, secure in their escape, and exulting in their booty.

At last, just as grey dawn began to glimmer in the east, and I was beginning to doze, (the locals had been snoring for two hours,) Keane came up: I sat up as he approached.

"All quiet, now sir," he said. "Their fire's black out, and in half an hour I mean to go in on 'em. I wish, though, they hadn't them d——d dogs; not that I cares for a tussle, sir,—but it may set those Gypsey chaps a resisting of us, and then mischief may come, you know, sir."

At the end of the time he had mentioned, he woke the heavy headed "locals," and I watched them with intense interest as they looked to the thongs of their staves, and put fresh caps on their pistols.

As they started, I felt a sort of shame at sitting out, reluctant as I was to appear to my late entertainers in a light which must give them suspicions of my fair faith.

Keane interpreted the expression of my face, and said firmly, and quietly, "You'll be good enough to leave this business to us, sir. We understand it—and we're more than a match for them, women and all."

So I accepted the ignominious part of a watcher, instead of the more exciting one of an actor; and with intense excitement watched them steal quietly forward under cover of the bushes, and broken ground, till the hedge of which I have spoken hid them from my view; and when I could not see, I listened. For a few minutes all was silence, made tenfold deeper by the hush of the early May morning.

And then came a quick sharp yelp of a terrier, and then a furious barking; and then a wild hubbub—a confused shrieking of women, and cursing and trampling of men in fierce struggle, and then—one shot!—and then again silence!

I could stand it no longer—I ran to the scene of conflict. All was over—Keane and his brave army had achieved a complete victory, if not quite a bloodless one.

Panting, gory, dishevelled, half-dressed, as disturbed suddenly from sleep, Euri, and the two Gypsey lads were sitting on the ground, handcuffed; and in the same ignominious plight—minus the blood—Athaliah, her two daughters,—and, alas the day!—my pretty Smfi.

Keane was wiping his forehead with a cotton handkerchief, while one of the locals was binding up a broken head, which his comrade had received in the *melée*. The faithful bandy-legged yellow terrier had perished.

PARALLEL RIVERS.

A clear, sweet stream, reflecting heaven,—
As angels' eyes, their God,—
Came babbling from the earth, to leaven
Its pure flow with the sod.

dimpled babe, serene, and white,
As desert moorland snow,
Came warm from God: and first at night,
Earth mingled with its flow.

The stream danced on through vale and mead,
Still on its bosom bore
The blue of heaven: mayhap, a reed
Was shadowed from its shore.

The child's round feet, on fragrant flowers
First learned to cling to earth,
While its clear laughter told for hours,
The glory of its birth.

The stream grew big,—tempestuous floods
Gave volume to its tide;
Its darkened passage through the woods
Was earthy and was wide.

The babe was now a stripling grown,
A shade was o'er his brow;
The music of his voice was flown,
His glance was turned below.

Yet something of the child was there,—
The pure intent,—the hope;
The glance to heaven,—the scorn of care—
But still the galling rope.

Some sunshine shot athwart the tide,
The tide laved valley-farms;
A gentle stream crept to its side,
A stream of crystal charms.

The boy, sad, strolling on his way,
Bruised flower-stains on his feet;
Soon met a maiden in her May,—
A maiden coy and sweet.

The mingled rivers passed along,
Through darkness as through light;
While from them, rivulets, in song,
Ran babbling, blithe, and bright.

The man and wife, now hand in hand,
In life long union rove;
And Time lets fall his numbered sand,
As children bless their love.

Through frowning caves, and wastes rock-bound,
The mingled rivers run,
And though their bed is on the ground,
Their bosom's to the sun.

The parents feel the iron chains,
That bind their feet to earth;
Yet brightly look to rainbow rains,
And trust diviner birth.

With heaving breast and tainted tides,
The rivers roll to sea;
The sea that purifies its brides,
Sets earthy streamlets free.

Parental earths to earth return,—
The worm reclaims his sod;
When fires divine are raised, to burn
About the throne of God.

W. B. J.

THIRTEEN AT TABLE.

Certain superstitions are like worms; you may cut them to pieces and they will gather their parts once more together, and amalgamate into a perfect whole. We happen to be acquainted with a select company of elderly ladies, whose opinions, on most questions, are shrewd and sagacious enough. But they still adhere to certain time-honoured superstitions which we have failed to destroy privately, so that it only remains to expose them publicly. We joined this elderly company at dinner on one occasion. The party consisted of an original selection of people, and our incredulity being matter of general gossip, we were received rather coldly. We were regarded as a person not altogether safe out of a strait-jacket, and there was a mixture of pity with the coldness we experienced from the old ladies. However, we endured the frigidity both of the guests and the viands prepared for us, with some show of equanimity. It did not escape us that as the dinner was proceeded with, we were the object of special attention; an old lady, in particular, (who wore a brooch in which the hair of her deceased tabby was most artistically arranged) frowned frightfully upon us. We felt that a storm was gathering about us, and soon it burst in the following fashion.

First Old Lady.—"So, sir, you think yourself very strong-minded to speak contemptuously of lucky and unlucky days, and all that sort of thing; but, pray, can you tell me what this means? Last April twelve rats scampered all about my house. I saw them, sir, with my own eyes—and three weeks afterwards my poor dear sister died."

The old lady looked at us so severely, that we were puzzled and abashed; but, presently, regaining confidence, we ventured to assert that by no possibility could the rats have known three weeks before-hand that the sister of the lady into whose house they had intruded, was so near the grave. "It is more than probable," we added, addressing our severe questioner, "that you had been supping off toasted cheese on the evening of the rats' visit, or that you had received a new supply of candles into your larder." This suggestion was met with an universal expression of dissent and horror by the company, my respected relative included.

Second Old Lady.—"Perhaps, then, sir, your heretical creed goes so far as to deny that anything can be read in the grounds of a cup of coffee?" Here the company, generally, nodded approval to the astute questioner: at last, thought all, the sceptic is brought to bay. But they were wrong; our hardihood increased with the heat of the argument. We ventured to give it as our opinion that the serenity and storms written in the grounds of a coffee-cup depended rather upon the kind of coffee-pot used, than upon any more mysterious agency; and we advised those of the party who put any faith in the distribution of sediment, to use a well contrived percolator, and they would always behold the brightest fate written at the bottom of their prophetic cups. Here there was a pause in the controversy: our opinions were contemplated with silent horror. Presently an old gentleman, with a bald, benevolent head, leant across the table, and, addressing us in a deep bass voice, said:—

"Now, sir, I beg you will listen with particular attention to something that occurred to myself to me, sir," he repeated, emphasising his words, and tapping his shirt-frill with his forefinger. "I was at Brighton about this time last year. Well, one Sunday I occupied myself after breakfast paring my finger nails; on the morrow I returned to town, and heard that my mother had died at the precise moment in which I was engaged upon my fingers."

"Dear me!" all the ladies exclaimed their faces expressing the most unqualified astonishment.

"Now, sir," the old gentleman continued, with his most impressive manner, "wouldn't you say that I was flying in the face of Destiny if I were to presume to pare my nails again on a Sunday morning? Look you that."

Still we were not cured of our scepticism; we could not allow that the old gentleman's mother had received her notice to quit for the sole purpose of warning her reckless son against the practice of reducing his nails on a Sunday. But on this point we were not allowed to deliver our judgment, since no sooner had the old gentleman ceased speaking, than a little, spare, wrinkled lady, with a quick, grey, searching eye, and a voice not unlike the sharper notes of a fifagoelet, interposed, to inquire whether or not we believed that an angel's wing had touched Mr. B——'s shoulder when he broke that pause in the conversation to which we have alluded. "I was brought up to think so, at all events,' the little lady added consequentially, "and I shall carry the belief to my grave, in spite of all new-fangled notions."

THIRTEEN AT TABLE. DRAWN BY W. MCCONNELL.

This being so, we informed the determined believer, that it would be throwing away time to argue the matter with her.

At this point of the controversy the servants entered to clear the table, our relative, and hostess, instantly addressed her favourite maid, saying:—"Martha, did I not tell you this morning, when my corns were shooting, that it would rain before night?"

Martha replied in the affirmative.

"There!" our relative added, addressing us with a triumphant and patronising air, "now look out of window:—it pours in torrents."

We remarked in reply that it had been very cloudy all day: that the glass had been falling for the last four and twenty hours; and that we ourselves, though cornless, had anticipated a wet evening. Here the favourite servant, Martha, who, from long and faithful service had become a privileged person in our relative's establishment, ventured to inform the company that "when a lady's nose itches, she is either going to be vexed, or kissed by a fool;" and she could cite many instances of the infallibility of the prophecy. But our relative, who is of a serious turn, stopped her domestic, and warned her that it was not seemly to talk about kissing before company. The attention of the table at this moment was drawn to a stout lady, whom we had noticed, more than once before, as a person evidently intent upon making the most of the good things of life. She was seen gasping very seriously.

"Pray what is the matter, my dear madam?" was the general inquiry.

"Somebody is walking over my grave," was the answer, and, in explanation, we were informed that when a cold tremor passes through the frame, it is an undoubted sign that some unholy person was walking over one's grave. There was no controverting this superstition; on neither side could contradictory facts be adduced for a long time; at length, we asked whether any of the people who had been drowned had ever experienced this shudder, and, if so, how it was possible for any person to be walking the broad Atlantic, for instance? We were rebuked very gravely by the old gentleman whose nail-paring had brought his maternal parent to an untimely grave, with the suggestion that hundreds of people might be walking over the spot—on board a ship! This remark was received by the company with huge approbation, and the ladies began to pity our benighted sceptical state of mind; some vowed that they would not be us "for all they could think of," while others could not imagine "where we expected to go." Our silence emboldened those who had hitherto refrained from joining in the controversy. One old lady declared solemnly that she always knew when people were talking about her, by an itching sensation in her ear; another always wished when she saw a falling star, and believed that she had her wish. We remarked to the latter lady that, in this case, she must be a person of enormous possessions; in reply, we were informed that she always made it a rule of keeping her private concerns to herself.

We were subsequently informed that it is very generally known throughout Norfolk, that no person who is married in the month of May can have any family;—that when an individual's elbow itches he may expect to change his bedfellow; and that on no account should anybody receive a knife, or a pair of scissors, without returning to the donor a penny as the nominal value of the gift. We were overwhelmed with a mass of evidence, of a most conclusive nature, in support of these various mysteries. Nothing less than a substantial blue-book would suffice to record the astounding facts to which we listened. Not one domestic article of furniture was without its use as a telegraph from the shades; every ordinary sensation, every daily event, had its dark and fearful meaning. Destiny spoke to the assembled company by tickling some, and meddling with the callosities of others. Crickets came to their hearths as messengers of fortune; cinders were, to them, gifted with the power of prophesying wealth or death.

A scream of horror from our relative put an end to the entertainment; she had discovered the alarming fact that we were thirteen at table! This intelligence was received by the ladies as their death sentence, and by the old gentlemen with visible uneasiness; but all joined fervently in the hope that their good hostess was not the doomed party. A smile having been discovered on our face, at the tremendous announcement, more than one of the old ladies solemnly warned us to pause in our heedless scepticism, and not to make too certain that we should not be the victim singled out.

WHO BRINGS THE BRIDE HOME?

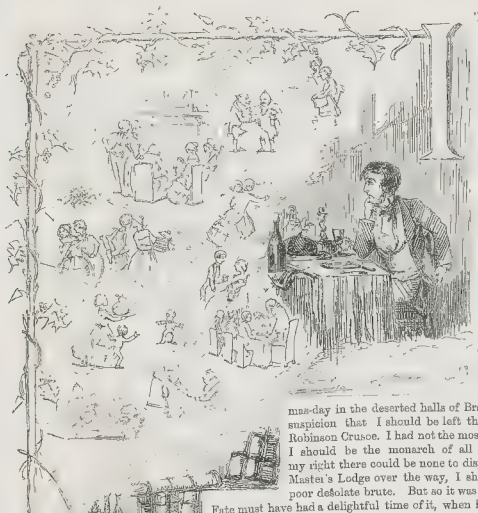
THE ONLY MAN LEFT IN COLLEGE ON CHRISTMAS-DAY.



'LL never do so again! If I do, may I be plucked for my "Greats!" And that, my masters, is a big oath; for this is the Oxonian for "Great Go;" which, in its turn, is the equivalent for the "Examination in *literis humanioribus* for the degree of B A." So that you may suppose I am terribly in earnest when I say, I'll never do so again!

When I came to the resolution of staying up in Oxford during the short Christmas Vacation, and spending Christmas-day in the deserted halls of Brazenface, I had no suspicion that I should be left there as solitary as Robinson Crusoe. I had not the most remote idea that I should be the monarch of all I surveyed; that my right there could be none to dispute; that, to the Master's Lodge over the way, I should be the only poor desolate brute. But so it was! And relentless Fate must have had a delightful time of it, when he saw me register that resolution.

Willoughby, Collins, and I, having hunted, idled, and "larked" together for the last twelve months, had taken it into our heads to forswear suppers and wines, and, in their stead, to open out cob-webbed Lexicons, spread over the table with Greek Plays and Aldrich, and old "Thicksides" (as we profanely called "Thucydides"), and start a reading "coach," of which I was constituted the "unicorn," or leader. Like all similar coaches, we went off at a slapping pace, scarcely staying for meals; and at the end of a fortnight found ourselves so blown, that we were fain to bait with a jolly wine-party. This threw us back at least a week, and when we had started once more, we found we were obliged to retrace our steps over a good deal of the road along which we had come so merrily. In another fortnight, just as we had got into condition again, and were beginning to pick up flesh, Term ended. So we held a virtuous debate, in which it was unanimously agreed upon, that the Christmas festivities, and pretty girls we should meet at home, would most undeniably and effectually disperse the heavier classical and logical awkward-squad we had with so much difficulty marshalled into our respective brains; so the stern resolution was adopted, that the Reading Coach should run through the Christmas Vacation; and the next day we got the necessary license to allow this.

When we had seen the last team of men off from the Mitre, and the last train leave the Station, and had walked up the deserted High, and had come back across the now dreary and silent Quad of Brazenface to my snug rooms, we sat down by the firelight, and there talked as Martyrs may have talked as Curtius may have talked, the night before he leapt into the pit in the Forum,—as Coriolanus may have talked, when he went out to war against his wife and children,—as Mr. John O'Connell may have talked, when he was about to die for his country on the floor of the House,—as any one may have talked, who, as our popular Comedians express it, have "been, and gone, and done it," and voluntarily given themselves up to disagreeable alternatives.

All went on well till Christmas Eve. Like cloistered monks, we buried ourselves within the college walls, and only issued forth for rapid 'constitutionals.' As Indians at the stake are said to relieve their pains by biting through their tongues, so we felt a certain relief in violent reading, and in thus revenging ourselves on those studies which kept us from so many pleasures. On Christmas-eve, Collins and I had gone out together alone for our diurnal constitutional, Willoughby having pleaded a headache; and when, after a stiff header round Hillingdon Hill, we had returned to my rooms, what was our surprise at reading the following laconic epistle, which was lying on my table:—

"Dearly beloved Charley and Collins,

"By the time you read this, I fervently trust I shall have got clean away from Alma Mater. The nearer we came to Christmas day, the more undutifully I thought I was acting in not going home to see my own Alma Mater, who, I'll be bound for it, has been sobbing her eyes out, at the thought of having to eat her plum pudding without her young Hopeful to help her. Excuse me putting a *rose* upon you, but I was afraid you would lay violent hands on me, and detain, against my will, in this dreary Brazenface,

"Yours clopingly,

"W. Longueville Willoughby."

I'm not quite sure what we said on the occasion, but, though I know we both agreed that he was the most ungrateful reprobate that the confiding arms of Friendship had ever embraced. I yet think we entertained a very strong, though unexpressed, idea, that we should only be too glad to follow his example. But if my surprise and indignation were great then, they were still more greatly excited the next morning.

I had lain rather late, having no horrid bell to rouse me up for chapel, so it was after ten o'clock on the morning of Christmas day before I went to Collins's rooms to breakfast, for he and I always boiled one kettle between us. There was the breakfast laid out, certainly, but only for one. And, to increase my wonderment, on diving into his bedroom, where I heard somebody moving, whom should I see but old Mrs. Tester, the bedmaker, busily employed in cramming linen, clothes, and a heterogeneous mass of articles into the portmanteaus that were gathered around her. The fearful truth at once flashed upon my mind! Collins was gone!

"Tell me—tell me the worst!" I gasped out, and old Mrs. Tester handed me the following note:—

"Dear old Charley,

"It's really too bad, upon my honour! But what else could I do? I dreamt about Willoughby all night, and the first thing this morning I got a letter from my sister to say what a Beast I was for not going home on Christmas-day, and that all kinds of things are going to be done, and that no end of people are there. Fanny among the rest, and what an awful state she's in about my preferring staying up here to going down there, and all that sort of thing. Now, who could stand this? Especially when he thinks of the infernal dulness of this hole. So I have made up my mind and my carpet bag to go by the 8.50 train, and I shall get to Hammersleigh in time for dinner. Mother Tester is to send off the heavy baggage by the next train. Quicken her about it, there's a good fellow, for I want to come out strong at our county ball on the 31st, and all my Sunday-going toggery can't be stowed in my carpet-bag. And do go home yourself, old fellow, by the next train; it's the proper thing to do; and depend upon it too much reading is bad for the lungs; I feel mine going already; and don't victimise yourself with the brutalising books, but get away home to the women, and have a bit of polish, and you'll ever bless the advice of yours, in a deuce of a hurry,

"Henry Collins."

I would much rather pass over the events of the day. I should not like to expose myself in the eyes of the public, as I feel I did in the eyes of the respectable Mrs. Tester. But I did *not* go home by the next train, I stayed where I was. I laughed a hollow "Ha! ha!"—like I had heard the Stage Pirates and Villains do; and I rather think I wished myself a stage villain, that I might do somebody an injury, and expend the fury of my gloomy anger. Hall-time came, and I slank across the Quad for my dinner. There was a cloth laid for me across the end of one of the long tables, and the nearest chandelier had two of its lamps lit for my especial benefit. Of course there was no High-table; any of the Dons, who were still in residence, would dine together on *that* day: and now Willoughby and Collins were gone, I was positively the only man left up the only man left in College on Christmas-day! "Ha! ha!" Desolation had marked me for her own. Our Dining-Hall at Brazenface is, as every one knows, one of the largest in Oxford, and the feeble light from the two solitary lamps only made it appear the more vast and solitary. When I peered into its farthest depths, and thought of the brilliancy, and crowd, and laughter, and loud hum of conversation, that, during the Term, reigned there at that time, I cut into the roast beef, before me, with a savage energy. At least, I had the proper Christmas dinner! They gave me that! But I only think it made me worse: if I had had other dishes, I might possibly have forgotten the day, and not felt so wretched. The cook, however, in his mistaken kindness, decorated the plum-pudding with a large piece of holly; and there was no forgetting that it was Christmas. My scout waited upon me: to do so, he had been obliged to leave a party of his fellow servants, and was sulky, accordingly. He told me of this, and asked my permission to rejoin them, as soon as he had put my tea-things ready against I wanted them. So even *he* was going to a merry party, and would be in company, and enjoy himself; whilst I——. "Ha! ha!"

The very eyes of the Founders and Benefactors seemed to be fixed upon me, from their canvas, as I ate my solitary dinner. It was soon over: it was not at all the sort of thing I wished to linger upon: and I walked out of Hall, and through the Second Quad, to the cloisters of our Chapel. It was the most lonely place I could find, and it harmonised with my thoughts and condition. There, busy Fancy took me back to past Christmas-days, and showed me all their joys and pleasures. I saw the happy groups of home, the family meetings, the hearty welcome of long-loved faces, the greeting of well remembered friends, the round the social table, the laughing faces of the children, the light hearted smiles of all, the cheerful fire side, the gleaming holly-berries and shining leaves, the mistetoe hanging enticingly from the ceiling, the noisy games, and the merry dance,—I saw all these; and, my classical reading not yet having converted me into a stoic, resolution gave way before nature; and within an hour I had packed up a few things, followed Willoughby's and Collins's example, and was being whirled away by the Express Train, every moment farther and farther from Oxford. I never before was so glad to leave it! Thanks to the blessings of the railway, and the pace we went, I got home that night, much to the astonishment of the assembled party, in time to bid them "a merry Christmas," before they broke up; and in time, too, to kiss Helen Clifford under the mistetoe!

I don't think that Mrs Tester will ever again be able to say of me, that I was the only man left in College on Christmas-day. If she can, may I be plucked for my Greats!

THE VISION OF LITTLE RUTH; OR, THE PLUM-PUDDING FLEET.

Ruth was only a little serving maid. She was bound to obey the commands of Miss Rosetta Coriander. Mrs Coriander, Ruth's mistress, had agreed to feed Ruth, and give her a certain sum of money, in return for certain services to be rendered to Miss Rosetta. Ruth endeavoured, to the best of her ability, to please her young mistress,—to meet all her whims, and to bear all her scoldings. Ruth could hardly afford to tax her mistress with injustice; though she felt that she was often blamed for matters over which she had had no control, and which might be very often more fairly attributed to Miss Rosetta. But then Miss Rosetta was a young lady, while Ruth was only the humble child of parents of low degree. All was sunshine on Miss Rosetta's path; but across that of Ruth dreary shadows flitted thickly. "What will become of my poor mother and me?" was Ruth's daily exclamation; that of Miss Rosetta was, "What colour shall I wear at our next party?" Poor Ruth looked up to her young mistress as to a creature who was immeasurably above her, and with whom she had no common nature. The blood that flowed in the veins of Miss Rosetta, could not, in the mind of Ruth, have any community of origin with the humble flood that supported her inferior being. The people who dwelt in gorgeous palaces, and scarcely knew what a kitchen was, could not come from the same stock as those humble mortals who deemed it honourable to serve gentlefolk!

Thus thought Ruth! Thus, as she sat alone, after her mistress had dismissed her, would she ponder on her own lowly state, and contrast it with that of the gay people in the noble rooms above her. Ruth was a sadder creature than the generality of her class. She was a modest, neat, and pretty little waiting-woman; and she was sprightly, too, in the presence of Miss Rosetta, for she was ordered to be so, but when, at night, she sat alone in her little chamber at the top of the house, a smile seldom lit up the fair proportions of her face. Ruth, like many who play comedies before the world, rehearsed a tragedy daily in her heart. A terrible hatred of all above her was silently growing up in this poor maiden's bosom, a hatred not appeased in any way by her daily intercourse with harsh rulers. She began to say to herself that all people above her in station were her natural enemies; and then, as this miserable creed fastened upon her heart, she began to lose her self-respect, to see in her daily labours the ignominious doom of her class, and to part from industry the self-esteem that it naturally creates in all honest hearts. And so she sat alone at night, mournfully rehearsing the labours of the day as so much slave's work forced upon her. She grew very fretful, and very discontented. She began to regard poor Miss Rosetta as a tyrannical monster, and to think of Mrs. Coriander as an autocrat who had unlimited power over her. Very hard and wrong did she deem the decrees of a world in which some wear crimson and satin, while others journey to the grave in gingham. She reviewed her lot, and refused to see one bright spot; it was all of one colour,—dark, and full of trouble. At the gayest seasons of the year she was saddest, and, therefore, as the year wore towards the end, and she saw the berries ripening on the holly, and the growing plumpness of her master's poultry,—as the grocer's windows began to wear a holiday aspect, and luscious candied fruits and cinnamon were displayed in patterns upon acres of Malaga raisins, and very fat cattle lowanged heavily through the streets, and mistetoe dangled in potato sheds,—when these hints of approaching festivities made their appearance in her neighbourhood, she pouted more than ever, and talked of the miseries of her class, and said that Christmas was only for her superiors.

No honour and no happiness came to her and hers; to work was their doom, not to enjoy. Thus, when Christmas-day came round, she dressed her young mistress gaily for the great dinner-party, and then relapsed to her moody humour. Silently she crept into her own little room, refusing the kitchen Christmas dinner (which was substantial and luxurious enough for any body, including wine and dessert), and with the determination to sit and dream of the happy scene in the drawing-room, and ask herself why she was not of that party, why there was not honour and enjoyment in her condition. She repelled the advances of the servants, refused the plate of beautiful fruit and the goblet of rich mulled claret which Miss Rosetta had sent to her to drink her health, and sat apart, grieving and restless at heart. There was no fire in the room, the windows were thickly encrusted with ice, and slowly, slowly the hours crept along. She exhausted her brain soon with the burden of her melancholy thoughts. She was absorbed and insensible to the cold.

The windows cracked, as though gently, very gently tapped. A strange pale light illumined the glass of one casement, and thence the tapping, now repeated, seemed to come. Under ordinary circumstances, this light and noise would have alarmed Ruth; but now she was so excited with her long, long meditation, that it seemed almost natural to her that strange noises and strange visions should mark the depth of her solitude. Very far off from the world and its vulgar bustle did she seem now, up in her room, silent, dreamy, and all alone. The blue, cold light gleamed every minute more intensely. Ruth rose from her seat, walked to the window, and threw up the sash, and then calmly sank upon a chair at hand.

The ordinary view of the neighbours' chimney-pots had disappeared; all was lost in a pale, blue, silvery haze, and the air about her was warm, and brilliant birds seemed to pass her rapidly; but only one living creature hovered steadily in the bright

clouds before her. This loiterer was a brilliant bee, with wings that sparkled like diamonds, and legs glistening with a yellow substance like gold. Poor Ruth, strangely puzzled, sat, and gazed intently. The bee buzzed loudly, and flew backwards and forwards, and then the silver clouds parted, and disclosed a beautiful landscape. It was an Eastern country, for there were groups of bamboos, —the low chattering of monkeys was distinctly audible; there was a bungalow, with a splendid mango-tree before it, with a seat under it, where a stout Dutchman was smoking, while two coolies were fanning him. And that was surely a porcupine that crept along the foreground. The bee burrs about till Ruth distinctly sees him glittering brilliantly in the distance over some negroes, who are busily engaged stripping bark from the branches of trees. She watches them. They bind the bark, and leave it for some time. Then she sees other men approach, untie the bundles, trim each piece of bark, separate the good from the bad, and roll the sound pieces into pipes. These they bind into huge bales; and, the brilliant bee still fluttering above them, Ruth sees them carry the loads to a fine ship that lies in the port at hand. She hears faint huzzas from the crew, and, as the white sails of the ship are falling from her spars as she is dressing herself for her journey, the blue haze gathers once more before the window, and only the bee remains in sight.

But Ruth has hardly time to think of the glowing, cheerful scene she has witnessed,—of the hearty sailors turning the head of their vessel to the broad ocean, with cheers, before the bee hums again wildly, and the silver haze melts from before another scene. Here is a beautiful English landscape,—not unlike Ruth's early home. A river trails like a serpent through it, and turns many busy mills on its way. The reapers are at work in the fields; the maids are milking the cows; the women of the dairy are churning butter, the sturdy men are marking oxen for the market. It is lovely weather, and the sweet breath of the cows steals in at Ruth's window —how happy are all the labourers, as she watches them, attended by the glittering bee, start off with the produce of their toil,—the miller with his flour, the maid with milk, the dairy-woman with her butter and eggs, and the grazier with his oxen. Again the silver haze covers all, and leaves Ruth once more alone with her brilliant bee. Ruth is lost in wonder, but is certainly more cheerful than she was an hour ago.

The bright bee hums again; and once more the haze melts, and discloses one of the beautiful vineyards of Southern France. Light and pleasant airs fall from the lips of the gay people who are gathering the rich bunches of grapes. The bee moves briskly about the scene; hovers over vats full of the juice of the grape; over the mash tuns, over the stills, whence at last (and here the bee flutters and hums excitedly) a gay workman draws a bright and sparkling stream into a barrel. Then the bee hovers over the barrel as it is whirled along a railroad to the sea coast, and only pauses, as the steam puffs from the funnel of the vessel, and she beats out of port, to point her head towards Dover. Ruth thinks she hears the pulsations of the paddles, as the silver haze again thickens before the scene, and the bright bee hums once more in solitude before her. Poor Ruth! How her heart beats; how the blood burns in her cheek, and her hands tremble on her lap. But the bee,—the indefatigable bee,—leaves her no time for reflection.

He is again humming loudly, and whisking about, and flashing his sparkling wings, as the silver clouds fade and open to view a bright harbour, with many gay vessels lying at anchor. Over one of these the bee hovers. Here the seamen are busily engaged embarking huge boxes. The bee flutters about one that is open —Muscadel raisins! That noble ship full of raisins! Again the film passes before the scene, and again fades, to show the Mediterranean islands, with citron groves, and heaps of dried currants, and vessels steaming out to sea with these luscious fruits. Then Ruth sees a glittering salt mine, then Cuba becomes distinct, and the poor negroes are shown, chopping up the sugar canes; and then the silver mist comes thickly before Ruth's window, and the blue light fades awhile; and the bee hovers serenely in the air; and all is quiet.

Ruth sits still, intently gazing. She is pale now, and very, very serious. Still she watches the bee, as the moments of the solemn pause pass by. Slowly the pale blue light comes again, and the bee begins to stir as his wings glisten with the returning brightness. The haze is very thick still, but it is melting. Ruth's eyes are strained in the direction where the mist is thinnest. Now it breaks, or seems to fall upon the blue bosom of the ocean, in the far distance. Nearer lies a busy city, and, upon a broad, clear river, a noble fleet of ships sail swiftly. Ruth remembers many of them. They near the port,—they touch the quay. They are all moored. It is a fleet loaded with plum-puddings. The bright bee is very excited. There is the noble ship with the currants and citron from the Mediterranean; there is the brig with the bales of cinnamon, from Ceylon, and a bag or two of nutmegs; there is the bright steamer, with the keg of brandy, from France; there is the stout ship, with the sugar, from Cuba; all busy unloading, and the bee fluttering above them. Ruth is dreadfully excited,—she feels that the climax of her wondrous visions is at hand.

The bee flutters about the city, and halts above its busiest thoroughfare. Here our bright friend hums so loudly that Ruth is certain something very exciting is going on in the great street below. True enough! The same brandy cask that she saw in the South of France, is being rolled into a merchant's; the sugar which she first beheld in the possession of the negroes at Cuba, is being deposited in the shop of a grocer, together with the cinnamon from Ceylon, the currants from Zante, the raisins from Malaga, and the salt from the salt-mine. Farther on, the grazier is leaving his oxen with the butcher; the miller is in treaty with a baker; the milk-maid is loaded with bright pails; and the dairy-woman has made her bargain with a butterman. And so, as the bustle and chaffering of busy trade goes on, the haze falls darkly across the window; the bee no longer hums, and Ruth buries her face in her hands, and, weeping, strives to comprehend the wonders she has seen.

Presently the cold air becomes gradually warm; through the crevices of her fingers a dim light reaches Ruth's eyes, she is now afraid to look up. A savoury odour reaches her nostrils,—this is very wonderful. She hears the crackling of a cheerful fire —and, surely, the tinkling of glasses. A pause of silence. The bee hums faintly from a distant corner of the room. Ruth opens her eyes, re-assured by her friendly guide. Her cheerless room is now a very cheerful one. The ice has melted from the window-panes; a fire sparkles in the grate; a snow-white cloth covers the table, and a smoking Christmas dinner is upon it; but, majestically overtopping all, is a mighty plum-pudding, with a sprig of holly standing erect in it. Yet there is a mist in the farther corner. Ruth trembles a little, and, though now very hungry, is afraid to move hand or foot. Presently the bee hums and flutters about the room like a winged diamond, and the mist begins to fade from the corner, and a face beams through, to gaze upon the timid, discontented waiting maid. According to the strict laws of fairy beauty, Ruth's unsubstantial visitor is not handsome. Her face is brown and ruddy; ears of corn are thickly clustered about the locks of her brown hair; her nether garments are travel-stained; in one hand (which is broad and square) she carries an exquisitely modelled steam-engine; in the other she holds a thrashing-flail; and about her neck a silver anchor is suspended. She wipes the moisture from her smooth brow, and smiles upon little Ruth. As she is about to speak, the bright bee hums and flutters, and then quietly settles upon the sprig of holly that stands in the Christmas pudding. There is a good-natured, frank expression on the face of Ruth's strange visitor, when she steps forward, with a light, brisk motion, to address the trembling little waiting-woman as follows:

"I am your friend, Ruth:—I am the Spirit of Industry. See, my hands are hard; my face is burnt; my limbs are strong; and I have a merry laugh and a cheerful heart. My little bee, here, nestling now upon your pudding, has shown you a few of my doings. You refused your Christmas fare to-day because you were a serving-maid, and your lot was to toil, but never to reap any enjoyment. My bee has shown you my children busy under the burning sun of Ceylon; gaily working in the vineyards of France; delving in the bowels of the earth; cheerfully ploughing the Atlantic on stormy nights, when all depends upon the stout hearts a ship has upon her decks; and all for this result, this, your Christmas pudding. This luscious ball (which, by the way, my bee is venturing to taste, I see) represents the industry of thousands of my children. In it the industries of the eastern and western hemispheres are largely represented. For this result, in merry England, on Christmas-day, work goes on all the year in the East Indies, in Ceylon, on the islands of the Mediterranean, in Spain, and in France. It has cost many anxious days and nights, dangerous voyages, mighty steam-engines, and no few risks. It is the result of great toil, cheerfully performed; therefore to be enjoyed heartily by every hand that has done its useful work. If the ploughboy paused at his work to lament that he was not a duke; if your master below refused his claret because it was not the Tokay of an Imperial Prince; if those who have fewer comforts than you enjoy, spurned those within their reach, and still murmured as you murmur, the world would be an unhappy world. It is honourable to work, Ruth; and so is it right to enjoy all the fruits of labour. Here are some of them. Your hands have been busy; be cheerful over the result. Your master was born of your degree:—he rose because he cheerfully worked. As he owes you respect for your labour, so do you owe him cheerfulness in the discharge of your duties. Christmas and its rejoicings are less for the rich than for the sons of industry, pausing from their labours, therefore, be of good cheer, and, as you work, know that every hour spent in good service is honourable. Farewell."

And so the vision and its lesson faded; and Ruth became a sprightly, happy girl, and did her work cheerfully.

WHO BRINGS THE BRIDE HOME?

SET TO MUSIC BY M. W. BALFE.

"O! where away, at early day,
In thy best doublet, Simon Bray?"
Quoth Simon, "Well, good Miller Fell,
My errand I don't blush to tell,
I'm off to bring my bride home!"

"And who's the maid?" the Miller said,
"With whom to-day your tryst is made?"
Quoth Simon, "Oh! you surely know,
The Fuller's daughter, Letty Snow,
And she's the bride I bring home."

"But I've been told, the Fuller's old,
And blind, and deaf, and loves but gold?"
Quoth Simon, "True; I've money too,
That's why the Fuller bade me woo;
And now I bring the bride home."

"But if you find the maiden's mind
Is to another man inclined —"
Quoth Simon, "He! what's that to me,
When once in wedlock joined we be,
And I have brought my bride home?"

"Well, Master Bray, speed as you may,
I must ride on, 'tis market-day."
Quoth Simon, "Well, good Miller Fell,
At noon you'll hear my marriage-bell,
And I shall bring the bride home."

Ride! Simon, ride! You'll lose your bride,
And all the Fuller's gold beside;
He's deaf, and blind, and weak of mind;
His daughter weds where she's inclined.
And the Miller takes the bride home.

M. L.

SIGN-BOARDS.

APROPOS to the season; here is a copy of a "Benefaction-board" in a Staffordshire church, from which record many poor families will be enabled to add to the pleasures of Christmas.

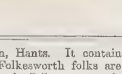
Rich^d Evans late of pen left
by will after his wife's dece's
2^{li} to be pay'd every year & le
ad out in bread 2^d loaves & giv
en to poor Householders of
the parish of pen as well as
them that have Constant pay
20^s on Cris'mus day & 20^s on
new year's day: if the same is
not truly pay'd or his late dw
elling house or any of the
bilding Sufford to go out in
repare the Church wardens
are in full power to enter
on all for the use of the
poor
1734

The spirit of the above benefaction is far preferable to the spelling; and in this instance, Penn has certainly not produced "a ready writer."

The next is from a beer-house, near the City of Durham, that is frequented by colliers and their "lasses," who appear to be devoted to tea and Terpsichore.

"A Bal and Tea will be held here on Tewsday at John Colpitts price one shillin and sickpens. Thothes (query 'those,') who wants tickets must cal hear."

The following is a literal copy of a sign conspicuously displayed in front of a small public-house, in the village of Folkesworth,* near Stilton, Hants. It contains as much poetry as, perhaps, the rustic Folkesworth folks are worth, and doubtless they think it to be (in the Stilton vernacular) "quite the cheese."



I . HAM . A . CUNFN . FOX .
YOU . SEE . THER . HIS .
NO . HARM . I . ATCHED .
TO . ME . IT . IS MY . MRS.
WISH . TO . PLACE . ME .
HERE . TO . LET . YOU . NO .
HE . SELS . GOOD . BEERE .

The Captain Rawlinson of the district has deciphered this inscription, and conjectures the meaning to be as follows:—

"I am a cunning fox, you see;
There is no harm attached to me;
It is my Master's wish to place me here,
To let you know he sells good beer."

C. B.

* It was in the lane between Folkesworth and the Norman Cross Barracks that Borrow was first induced to try the Gypsey life. See his 'Lavengro'

THE LITTLE FIR-TREE.

A CHRISTMAS TALE FOR CHILDREN.

IN a small plantation hard by a great house there lived a little Fir-tree. But though it was but little, yet it grew straight and upright, and raised its head higher than its companions. Perhaps the sunbeams and the gentle rain loved the little Fir tree, and nurtured it more tenderly than its fellows, and made it grow, while they stood still, and lift and it up from the ground until it looked down upon them. So they were all jealous of the little Fir-tree, and their very sap throbbed with indignation, and they spoke softly to each other and said, "Hem! Listen, brother! Our cousin is taller than we are, and see what grand airs he gives himself! He has taken to long boughs, and says that his cones are growing! Oh, the upstart! Where will his impertinence end?"

"Where, indeed!" answered one who grew up in a damp corner, and was deformed almost from his cradle; "where, indeed! But weeds of ill, brother, grow apace, and our proud cousin may yet come to the scaffold."

The little Fir-tree overheard him, and laughed. "Ha! ha!" he said. "I may help to build a scaffold, perhaps, but you, cousin Crookback, you will never be worthy even of railing." So light of heart was the little Fir-tree.

Then, one day, when there was a light sprinkling of snow on the trees, and the ground was hard, and the air sharp and bracing, there came a man to the small plantation, and he had a spade in his hand, and the little Fir-tree knew him to be the gardener. Then the gardener looked round upon the trees, and when he had gone all through them, he came up to the little Fir-tree, and put his spade in the ground, and dug the earth about it. And when he had taken it up, he put it into his wheelbarrow, with the soil still clinging to its roots, and then he slowly wheeled it away. So the other trees rejoiced, and the deformed one laughed out, and said, "It is my turn now; good-bye cousin! I would not change my broken back for your tall limbs. A pleasant ride to you!"

So the little Fir tree went off in its wheelbarrow, and tried to sit in it with a jaunty air, as if it was only being taken for a pleasant airing; but though it put on such a don't-care look, its heart within was heavy, and it was not simply the dissolving snow-flakes that caused all the tears it shed. But the gardener wheeled it away down a long walk, and then through a door into a garden larger than the largest the little Fir-tree had ever imagined in its life, and then along through paths of fruit trees, to a shed behind the hothouses, where the gardener left it for the night. And a pretty night the little Fir-tree passed! For, after some hours of troubled thought as to what its fate on the morrow might be, it fell into a restless sleep, and dreamed bad dreams, in which it saw its broken-backed cousin of the plantation suddenly changed into a terrible shape, with a gleaming axe that chopped and hewed off all its arms, and then aimed such a blow at its head that the little Fir-tree awoke with a start, and found it was broad daylight, and that the gardener had come again, and was lifting it into a large red flower-pot.

While he was doing this, there came up a fine, good looking, red-faced gentleman, who, before the gardener saw him, cried, with a cheery voice that rang out merrily in the frosty air, "Good morning, Thomas; a merry Christmas to you."

The gardener, turning round, saw his master, and said, "Thank'ee, Squire; the same to you and yours, and a many on 'em. I came to get the tree ready for to night, and I don't believe the little ladies and gentlemen will ever have set their bright eyes on a handsomer or properer Christmas-tree than this here!"

So spake Thomas, for he was more deficient in grammar than in warmth of heart; and the little Fir tree rejoiced as he heard him, and said within himself, "Ha! ha! Cousin Brokenback, what would you say now? My beauty and uprightness have brought me out into good society, and, instead of being with you in that dirty plantation, I am going to a clean warm home, to be planted in a circle of little angels!" For the little Fir tree heard the Squire tell Thomas to take it into the house, and place it in the drawing-room ready for the evening's party; and he would have jumped for joy, had not Thomas, by that time, have fixed his feet firmly in the mould that filled the large red flower-pot.

So the little Fir-tree was taken to the great house, and placed on a white cloth spread over the middle of the soft drawing-room carpet. And the day passed very quickly, for he saw around him so many beautiful things that he fancied he should never tire of looking at them, and scarcely knew where first to fix his gaze. There were couches of velvet, and ottomans all worked over with flowers much more gorgeous than he had ever seen in Nature,—and there were great chairs, and small chairs, and tall chairs, and short chairs, and straight-backed chairs, and twisted-legged chairs, and great carved-oak chairs, and papier-mâché chairs,—and large tables, and little tables, and ladies' work-tables, and little queer knock-me-over-knick-knackery tables,—and books, and gilding, and china bowls and jars, and lamps, and paintings, and bright frames, and fancy screens, and funny ornaments, and gilt Cupids, and old cabinets, and shells, and porcelain shepherdesses, and Parian statuettes, and French time pieces, and lustres; but above all, a great tall mirror, in which the little Fir-tree could see itself, almost at full length; and I am not quite sure if he did not look there much oftener than at the other pretty things which were crowded around him.

All that Christmas day that drawing-room was treated with a peculiar mystery. The door was locked, and none but a chosen few entered, and that only when the mistress of the house per-

mitted them. On these few occasions there was a rush of juveniles to try and get a peep through the opened door; but they were always repulsed by a terrible, strong minded Butler, who kept guard on the mat, and allowed none to pass, treating with contempt all bribes and overtures, and not to be enticed from his post of trust even when one of the youngest and prettiest little girls promised, in the most unblushing way, to marry him off hand, if he would but let her go into the room only for one minute! And then, when, under these trying and tempting circumstances, the strong-minded Butler remained true to his post, the children, with shouts of defiance, would scamper round to the garden side of the house, to look through the French windows that opened on to the lawn, but only to find their blinds closely drawn down, and the mystery of the room still triumphant. So there the little Fir-tree, the centre and cause of all this mystery, remained all day, and the hours came and went, and the Christmas joy-bells rang out their cheerful peal from the old grey Church-tower in the Park, proclaiming that He, who sanctified childhood by assuming its form, was, on that day, laid a helpless infant on the bosom of His Virgin Mother, in the manger at Bethlehem: and rustic voices, taking up the sacred theme, sang carol-songs, to which soft flutes breathed low response; and aged men and red-cloaked women tottered up and made their Christmas welcome, and sought the servants' hall for Christmas cheer; and the dark shades of evening spread over the sky, and the stars shone out brightly, one by one, upon the snowy landscape, and then, with the night, came the full joy and glory of the little Fir-tree.

How changed he was from yesterday, when he was growing close to his crooked backed cousin in the small plantation! Not even his own brother would have known him, could he have seen the little Fir tree now! Lights blazed all about him. On his head, on his arms, on his sides, and even in a double circle round about his legs—there were nothing but lights! If he had had a bad fever, and been light-headed, and broken out all into an eruption of tapers, he couldn't have been worse! There they were, on all sides of him, and in all colours: red tapers, blue tapers, yellow tapers, green tapers, white tapers,—all sorts of tapers! Nothing but tapers blazing away, regardless of wax, in a perfect illumination, and throwing their light on the most beautiful trinkets and toys that the hand of man had ever contrived, or the heart of a child imagined. These were hung on every branch of the little Fir-tree, and made quite a brilliant display with their varied shapes and colours. There were little pocket-books and souvenirs, with worked sides to them; and bonbons in elaborate wrappings; and small ballet-girls, and sailors, and soldiers, and sweeps, in proper costumes; and mother-o'-pearl paper knives, and even silver fruit-knives; and pencil-cases, and jack jumpers; and glass pens, and feather pens; and miniature books; and comic pictures, and pretty sketches; and tombolas; and gorgeous toy-watches and gold chains; and Noah's Arks, with all the animals two and two, and Shem, Ham, and Japhet, and their wives, with a strong family resemblance to Noah; and monkeys that were painfully pushed over sticks; and butterfly pen-wipers; and nuts wrapped in elaborate envelopes of paper, that cruelly crushed the hopes they gave rise to; and silk purses and pincushions; and models in sugar that were perfect works of art; and hollow India rubber balls, which irresistibly invited the attacks of pins; and juvenile dolls attired in the extreme of fashion; and flocks of geese, and troops of tin soldiers, that advanced and retired on ingenious Vandyked platforms, and poodle dogs with swan's-down fur and glass eyes, from whom, when pressed, there came unbearable barks; and, above all, at the very top of the tree, a figure of Victory, standing on one leg, and waving two flags.

"SO THE LITTLE FIR-TREE WENT OFF IN ITS WHEELBARROW, AND TRIED TO SIT IN IT WITH A JAUNTY AIR, AS IF IT WAS ONLY BEING TAKEN FOR A PLEASANT AIRING." DRAWN BY DUNCAN.

And when the little Fir-tree looked in the large mirror, and saw all this blaze of splendour, and the tapers, and the toys, and the trinkets, and when he gazed on the bright faces of the rosy children, and watched their joyous delight when the numbered tickets they had drawn from mama's lucky-bag, turned up prizes, and they held up their winnings in triumph, and thought no toys were ever made like them, and when he saw the hearts of young and old linked together with the holy bond of love and friendship with which that season ever endears its worshippers, then the little Fir tree thought, that if Christmas has power to raise such pure and heavenly feelings, it must be a festival whose origin was from Heaven itself.

And when the little Fir-tree thought of that, he put away all his pride of heart, and all his unkind thoughts towards his crooked-backed cousin, and determined that if his life was spared, he would henceforward grow up a better tree.

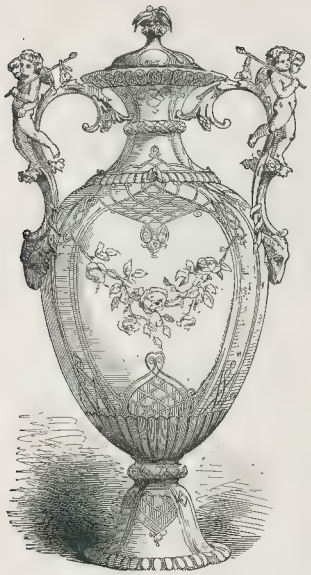
And when all the gifts had been distributed, and the wax tapers had burned low, then, with a great triumphal procession from the children, the little Fir-tree was conducted out of the drawing-room. And all that night it brooded on the good and kindly thoughts which the scenes of that Christmas evening had called forth; and the next day came Thomas, the gardener, and he took it back again to the small plantation from whence he had brought it, and put it once more in its old place. And all its brothers and cousins wondered when they saw it again, and they said, "Brother! where have you been since the stars shone twice upon us? Tell us!" So then the little Fir-tree told them of all that he had seen, and all the love and happiness that had shone around him, as a Christmas-tree, and he said to his crooked-backed cousin, "Cousin! let us live in peace; for to all the works of Creation this season brought Peace on earth, and a Prince at Whose Presence even 'the trees of the wood may rejoice.'"

CUTHBERT BEDE, B.A.

"THEY WERE ALWAYS REPULSED BY A TERRIBLE STRONG-MINDED BUTLER, WHO KEPT GUARD ON THE MAT, AND ALLOWED NONE TO PASS."—DRAWN BY DUNCAN

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, DECEMBER 27, 1851.—SUPPLEMENT.—GRATIS.

THE GREAT EXHIBITION:



VASE.—BY MESSRS MINTON AND CO. THE HANDLES IN ELECTRO-SILVER.—BY MESSRS. ELKINGTON.

Messrs. Minton, amongst other articles showing the progress of ceramic manufactures under modern producers, exhibited a large collection of vases, formed and coloured after old Sèvres models, but with new decorations after the old Sèvres style. In these the beautiful colours bleu du Roi, mazarine, and Sèvres green are introduced, as well as decorations in gilding, turquoise, &c.; the festoons of flowers and perforated chain handles are admirably executed. In the vase before us, which is a very choice and elegant specimen, the handles are in electro-silver, by Elkingtons. It has been purchased by Prince Albert.

BRONZE CENTRE-PIECE. BY R. W. WINFIELD.

Besides articles of more general utility, as stair-rods, brass bedsteads, &c., Mr. Winfield exhibited some productions of a purely decorative character, of which that before us is a pleasing specimen. It is a centre-piece, or candelabrum, in bronze, of very elegant design; the base containing medallions emblematic of poetry, philosophy, and music, and surmounted by figures in parian, by Minton, of art, science, and industry.

THE STARTLED NYMPH.—BY W. BEHNES.

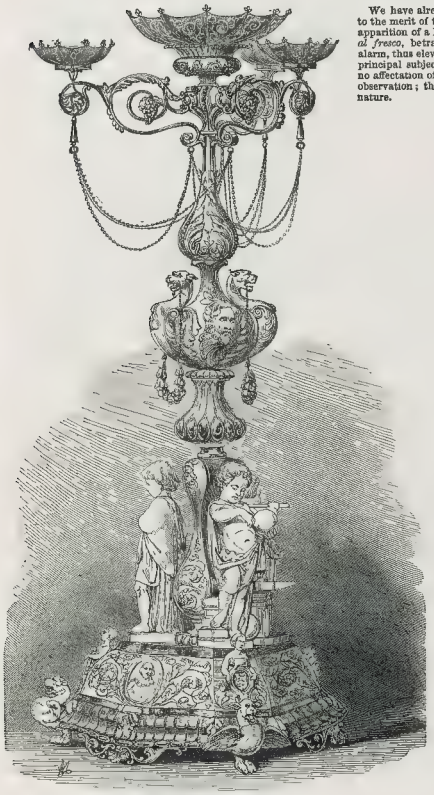
We have already in our articles on sculpture borne testimony to the merit of this performance. The Nymph, startled at the apparition of a lizard at her feet, on her emerging from a bath *al fresco*, betrays more of astonishment and curiosity than alarm, thus elevating rather than degrading the character of the principal subject. The treatment is simple and graceful, with no affectation of false modesty, the situation being one free from observation; the whole expression is full of innocence and nature.

GROUP OF CHINA.—BY W. T. COPELAND.

Copeland, who has the honour of having taken the lead in the recent application of the ceramic manufactures to all purposes, presented a rich display in various styles—Grecian, Etruscan, Alhambresque, *Renaissance*, Gothic, &c; abounding in every description of decorative appliance. The group we engrave comprises a magnificent Etruscan vase, standing on a pedestal forty inches high. The ornaments are in gold, chased and burnished, on a blue ground, decorated with floral wreaths enamelled in colours.

SILVER CENTRE-PIECE. BY FROMENT MEURICE.

This is a very magnificent production, in oxydised silver. It represents the four Seasons, standing on the globe, which is supported by Tritons. The sculpture and chasing are by M. Klagmann. The execution throughout is admirable. It was made for the Duc de Luynes.



CENTRE-PIECE, IN BRONZE.—BY R. W. WINFIELD, BIRMINGHAM.

CENTRE-PIECE (THE SEASONS), IN OXYDISED SILVER.—BY FROMENT MEURICE.

LITERATURE.

THE LILY and the BEE. An Apologue of the Crystal Palace. By SAMUEL WARREN, F.R.S. Blackwood.

They who have visited the Crystal Palace (and who has not?) must have felt the state of revery into which their minds have been thrown by the multiplicity and confusion of objects by which they were surrounded. Here a suggestion, and there a suggestion; and, anon, both alike interrupted by a third: and then a temporary absence of mind in pursuit of some thought or recollection; and, next, its return to the spot owing to some chance association; instantly to wander away again into some far region of space, or some rearward and abysmal period of time; to be as suddenly called back to the marvels of the present, or projected onward into the prophetic wonders of the future. The tone and temper of the book before us is caught from such a state of mind. It is a revery, by day, and night, and morning, in the Crystal Palace.

The style of the book is parcel of its matter. It is visionary, fragmentary; sentences unfinished, sentences mispunctuated, sentences divided into paragraphs, syllables in rythmical arrangements, words defying rhythm, verse, prose, unacknowledged citations of phrase, maxim, metaphor; some felicity of diction, some grandeur of thought, borrowed, reflected, refracted; topics crossing each other, nebulæ of subjects, constellations of arguments; chaos, creation, life, savage and civilised; fact, theory, guesses at truth, denunciations of falsehood; faith, scepticism, impiety, piety, philosophy, poetry, mystery, praise, prayer, adoration and mystical absorption into the Infinite;—these constitute its style, and give to it more than the variety of figure and colour that charm us in the kaleidescope. The title is fanciful—yet holding of a fact, or rather two facts—the Beehive and the Lily, that form parts of the Exhibition to which this attractive volume relates. In these pages many will find a reflection of their own mental condition.

Some mysterious Voice is supposed to address the scribe, and to speak of the plain of Shinar and the Tower of Babel; of the Pisin of Dura and Nebuchadnezzar's Golden Image; and then of the analogous scene at the Royal opening of the Crystal Palace—analogous except in one important particular, that the Majesty of Heaven was supplicated, not insulted, on the recent occasion. Directed by the Voice, the writer hastens to the scene of multitudinous confluence:

"There was standing without the Crystal Palace, in a pauper dress, a gray-haired harmless idiot, gaunt as the vast structure, vacantly. Gently arresting me as I passed, he pointed with eager, gleeful mystery, uttering incoherent sounds, to the door which he was not permitted to enter.

"'Poor soul!' said the Voice, mournfully, this banquet is not spread for *thee!*

"I left him without, gibbering to a pitying sentinel, and entered with a spirit saddened.

"——DAY IN THE CRYSTAL PALACE!

"There was music echoing through the transparent fabric. Fragrant flowers and graceful shrubs were blooming, and exhaling sweet odours. Fountains were flashing and sparkling in the subdued sunlight: in living sculpture were suddenly seen the grand, the grotesque, the terrible, the beautiful: objects of every form and colour imaginable, far as the eye could reach, were dazzlingly intermingled: and there were sixty thousand sons and daughters of Adam, passing and repassing, ceaselessly: bewildered charmingly; gliding amidst banished Nations—through country after country renowned in ancient name, and great in modern civilised and savage. From the far East and West, misty in distance, faintly echoed martial strains, or the solemn anthem! The Soul was approached to its highest senses, flooded with excitement; all its faculties were appealed to at once, and it sank, for a while, exhausted, overwhelmed.

"Who can describe that astounding spectacle? Lost in a sense of what it is, who can think what it is like? Philosopher and poet are alike agitated, and silent; gaze whithersoever they may, all is marvellous and affecting; stirring new thoughts and emotions, and awakening oldest memories and associations past, present, future, linked together mystically, each imaging the other, kindling faint suggestion, with sudden startle.—And where stood they? Scarce nine times had the moon performed her silent journey round the earth, since grass grew, refreshed with dew and zephyr, upon the spot on which was now the Crystal Palace, then not even imagined in the mind of its architect,—now teeming with things rich and rare from well-nigh every spot of earth on the terraqueous globe, telling, oh! grand and overwhelming thought! of the uttermost industry and intellect of man, in every clime, of every hue, of every speech, since his Almighty Maker placed him upon the earth.

"Sixty centuries are sweeping past me. Their sound is in my ear, their dread is on my soul. The air—the dust—is instinct with life, the life of man, speaking to the soul of all its hopes, and fears, and joys, and delights, and woes, and cares that have agitated the countless millions, my fellows, descended from our fallen Father, the first Adam, and like him returned to the dust.

"Return, with lightened brow, with cheerful look, said the Voice, benignantly, and read a scroll, suddenly unrolled of the dongs of they race upon the earth.

"Again within the Nave—all bright! all beautiful! Hail! Welcome! brethren, sisters all! Come hither trustfully, from every land and clime! All hail! ye loveliest! bravest! wisest! best! Of every degree! complexion! speech! race and the self-same blood in all our veins! Our hearts, fashioned alike! Alike feeling, loving, admiring: with the same senses and faculties perceiving and judging what the same energies have produced! Stay! Has my ear, suddenly quickened, penetrated to the primeval language, through all its variations, since the scattering and confusion of Shinar! O rare unity in multiplicity, uniformity in endless variety!

"Yonder comes the Queen! No hideous shot, nor shell, tears open a crimson path; but one is smiling before her,—melting with love and loyalty! All unguarded! No nodding plume, nor gleaming sabre, to startle or appal; she is moving amidst myriads—silent myriads: unheard by her, but not unfelt, their thoughts, fondly flowing while she passes by:

"'Oh, all from foreign lands, uncovered be awhile; behold a solemn sight—
"'A nation's heart in prayer:
"'And hear their prayer,
"'God save the Queen.'"

Many a time, in the course of these rapturous utterances, allusion is gracefully made to the Royal Consort, not only as a Prince, but as a philosopher. This is England's peculiar blessing, that, at the moment when all monarchy is in peril, she possesses a Prince whose mind is so constituted as to bring the very element into the system which is needed for its salvation. The different compartments of the Exhibition named from all countries are full of suggestion to the writer, who brings together all possible accidental coincidences. The following are Mr. Warren's appositic reflections on the American contribution of the "Greek Slave"—

"Brethren, ye bring us a form of Beauty, and in chains!
Look ye yourselves upon her loveliness!
Ponder her thrilling tale of grief!
She is not mute, O marble eloquent!
She pleads! She pleads!
Gazing on Stars and Stripes, to your own selves she turns, and pleads, in manacles!
Though listens England's Queen, she listens all in vain!
Sweet slave! turn from our Queen beloved that agonising look!
No chains, no hands, her myriad subjects bear,
They melt in contact with the British air:
Her sceptre waves—and fetters disappear!
Turn, turn, then, beauteous slave!
Oh make thy mournful suit, to those deep-meaning ones who sent thee hither!
Their Saxon brethren here can only sigh!
—Who stand behind thee, beautiful one?
Daughter and son of Shem! how came you hither?
Wild brother of the woods!
Clad in the spoils of eagle, buffalo, and bear!
Strange son of Adam! Sharer of his chartered rights!
But why that hideous scalp, from thy slain brother torn—
Kinsman of Cain!
And thou! Physician!
Thou stands before a Christian Queen! Why wear that emblem of a savage hate?"

In like manner, the bust of Herschel reminds the writer of the history of natural philosophers; and he travels back to Newton, and forward to Le Verrier and Adam, alluding to their discoveries in hints and phrases, that, like snatches of harmony, bring to mind the whole composition of their wondrous history. Bessel, Foucault, Irene, Owen, Stephenson, Faraday, and others, in like manner, find their places in this unexampled revery; and vanish, like dreams; "come like shadows, so depart." There is also a sort of dithyrambric to the Koh-i-Noor, and another on the Canadian slab of greystone, marked with the traces of the primeval tortoise. The wonders of British machinery awaken similar lyric raptures; and then the pests of all climes. The first part concludes with a learned apostrophe to the Lily.

The second section of this rhapsody opens with a description of the Crystal Palace at night. The scribe is alone, spirits appearing to him in that mysterious and suggestive solitude. Alexander, Napoleon, Alfred, Aristotle, the two Bacons, Archimedes, Marcellus, Cicero, Galileo, Pythagoras, Ptolemy, Socrates, Plato, Copernicus, Descartes, and others, with the Greek tragedians, Æschylus and Prometheus; these leading on to reflections of the buried cities of the past, and the stern history of the days of old, even that of Cain, of Adam and of Eve, and the solemn prophecies of judgment to come. This portion concludes with an apostrophe to the Lily.

The moral of the whole occupies the following brief section:—

"——*[To the Spirits.]* Well done;—avoid;—no more!
——This is most strange!
You do look, my son, in a moved sort!
Be cheerful, sir. These our actors,
As I foretold you, were all spirits, and
Are melted into air, into thin air
And like the baseless fabric of this Vision,
The cloud-capped towers, the gorgeous palaces
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve;
And like this unsubstantial Pageant faded,
Leave not a rack behind!"

"——Go then, thou grand One of the Present, grandly into the Past.
And for the Future,
Leave no trace behind, but in the Mind,
Enriched, expanded, and sublimed.
Only a noble Memory
Be it, or, to sensuous eye,
Quickly, as though thou hadst not been.
Let the place that knows thee now,
Know thee no more
Let the grass grow again, where grew the grass so short a while ago.
Let the wandering winds blow freely o'er the site where shone so late,
The gleaming Wonder of the World.
Let world-wide pilgrims come,
In all time hereafter, unto this sceptred isle,
This little world,
This precious stone set in the silver sea,
This blessed plot, this earth, this realm, this England,
To that great spot:
And, pointing to their sons, all grown incredulous, say,
Here it stood."

We decidedly disagree with this conclusion. It has a certain sublimity in the idea as here set, and framed and glazed. But we are, nevertheless, persuaded that the sentiment is false and baseless. It is destructive; it substitutes nothing for something. It destroys the best and most appropriate memorial of a great event. It is ungrateful, thankless, spoliative, and barbarous. It affects Iconoclasm, and condemns, by implication, the Temple and its sanctities, which it dares to ruin. Let this pernicious section be removed from future editions.

MARIAN WITHERS. By Geraldine E. Jewsbury. 3 vols.—Colburn.

"Out of the fulness of the heart, the mouth speaketh;" when it speaks wisely. The excellence of this novel of Miss Jewsbury consists in her intimate knowledge of the persons and fortunes she describes. Here we have the manufacturing mind, in its practical and speculative aspects. Both are here. This is the life that men and women lead in Manchester—such are its limits, conditions, aspirations; such its wants, defects, hopes, labours, virtues. These are, perhaps, somewhat unfairly contrasted with the foibles and vices of aristocratic society; not, however, with out apology; for there are no class vices in this delineation—all is a just development of the human mind under various circumstances. The domination of love in all conditions is the pervading argument. But the foundations of the tale are laid in poverty and crime.

The story has a prologue. This relates to the parents of the heroine. John Withers, the father, was a poor boy, brought up with Alice Withers, who simulated his sister as a mendicant. Both are taken from the streets by a benevolent lady, placed in the workhouse, and ultimately apprenticed to a factory. John has to supplicate to be permitted to learn to write, but obtains his request. He becomes a good and intelligent workman. While watching the machinery, however, an improvement, strikes him; possessed with which he neglects his ordinary labours, and in order to pursue the invention, throws himself out of work until he suffers the utmost penury. But the mental operation thus suggested is best describe in Miss Jewsbury's own words:—

"As may be imagined, this mode of keeping life together was precarious in the extreme. It was a remarkably severe winter, and he had to suffer great straits; but the horror of his early begging experiences was so strong, that he never once resumed asking charity. Yet want is fierce, and nature is weak. Once there was a hard frost for several weeks. An east wind blew over the wold; the snow lay thick on the ground, and people began to fancy that England and Siberia must be much of a piece. Poor John in his garret, without fire, without food, almost without clothes, with only a heap of shavings for his bed, was in a sufficiently bad plight. His benumbed fingers could scarcely hold his tools, and with the chisel he inflicted a severe wound upon his left hand, which the frost inflamed, and for several days he could not work at his models. During this suspension he was tempted sorely to seek for some alleviation. To the parish he did not dare to apply, because he would at once have been ordered to some employment, and he could not endure to betray the secret of his dear models. One facile mode there was of getting food, or at least bitter drink, of old times when he used to go out with his sister came upon him the forgotten slang and manner of his old trade returned to his memory, and with it the memory of the misery, the degradation, and finally the crime which he had been plunged—the lame sailor—the drunken woman—the savage blows and kicks inflicted on himself and his sister the last day he was in the cellar: but worse than these were the mnemonic signs for procuring regular mendicants. 'And am I going to fall back into all that?' he thought. 'What a cowardly beast I am! What I am suffering is nothing more than I bore then every day!' His hand throbbed with pain, he was sick for want of food, . . . two forty-eight hours since he had tasted anything. The intense bodily sensations of hunger, cold, and pain were more imperative and emphatic than the voice of his resolution. A portly, comfortable, benevolent-looking old lady was coming across the street; she came close to where he stood, she attempted to speak, but a deep shame stopped him at the moment she turned her head to see who was addressing her. 'Do you want anything, my good man?' 'No, ma'am: I thought you were losing something.' 'Well, bless me, if my fur tippet is not loose: I thought I felt cold—thank you, kindly;' and the comfortable, well clad woman passed on. John moved dejectedly away. He was glad he had not begged, but he was giddy with cold and hunger. He went on, he hardly know whither, till he was stopped by a large heap of coals which lay before a house. A decent-looking woman stood at the door, looking up and down the street, apparently in great perplexity. 'Here, my good man,' said she, perceiving John, 'these coals have been brought in at a shameful time of night, and the man has gone away, and just left me to manage as I can. If you will stop and get them in for me, I will give you sixpence and a mug of beer. It will not take you long.' Her voice was like the voice of an angel to poor John. He seized a spade with alacrity, and gathered in the coals to the good woman's perfect contentment, who gave him a plate of broken meat as well as the promised reward. To poor John it was like the feast of Dives, and better than all was his thankfulness at having been restrained from begging. But the 'fightings without' were nothing in comparison to the 'fears within.' Unforeseen difficulties were constantly arising in his work; failure after failure, when he felt most certain of success, came to shake his faith in his own inspirations. At last the unflinching energy of his nature was strengthened by a fearful ally—he was hovering on the verge of MADNESS. His heart became the ultimate momentum of a fixed idea. He went on and on with the accelerated energy generated from his previous efforts. Thus he worked under the shadow of madness: his only guides were his unaccountable fears; every failure became for a short time hallucinations, lighting up his path for a few steps. At last he completed a model that works successfully! He had compel ed his idea to assume an adequate shape, to interpenetrate the wood and iron, and to work them flexibly as the body is worked by the soul. The demon which had possessed him, which had fed upon his life and upon his reason, was now exorcised: it had entered in to his work, and he beheld it peacefully and orderly performing that which he had given it to do. The revulsion of feeling was too strong, and he sank upon the ground beside his model in a fit of hysterical weeping. The stimulus which had so long supported him was withdrawn, and both body and mind fell collapsed. With something of presentiment he arose, and with the last struggle of expiring energy he took his model to pieces and put it in an old box, his only article of furniture. Then, with limbs that were weak and wasted, and with the tears he could not restrain running down his cheeks, he wandered into the street. After a few steps he was unable to support himself. He made a clutch at some iron railings, but missed his hold, and fell heavily under the wheels of a coach which was passing at the moment. He was picked up by bystanders and carried to the hospital. The actual injury he had sustained from the accident was trifling, but all his faculties seemed to have been blotted out; his strength was prostrate, and he remained for a month in a state resembling idiocy. At length he awoke as from a sleep—gradually his brain recovered its consistency—the recollection of the past came upon him—but his recovery was slow, and it was full three months before he could be discharged."

The invention of John Withers lays the foundation of his future fortune. He marries the daughter of his master, who had become bankrupt; and after awhile is rejoined by Alice, who occupies in the family the function of Aunt.

Marian Withers is the daughter of this manufacturing genius. She is carefully educated at school, and in the course of time, gets introduced to fashionable life. A week's experience of this makes her discontented with the limited sphere of home. A gay young man, also, engages her affections; and altogether it needs that something should happen to disenchant her. A revisit in the same scene does this effectually. Their artificiality, dissipation, and insincerity disgust her. A friendly genius also comes to her aid in the shape of a Mr. Cunningham, an intelligent man of fortune, who takes an interest in manufacturing relations, and ultimately becomes her father's partner and her husband. There is also an episode of illicit affection between a Lady Wollaston and Albert, the faithless swain of Marian, which is treated with as much taste as truth. It was dangerous ground, but worth exploring for the sake of the moral lesson. Miss Jewsbury has passed the ordeal uninjured. The glimpses into the human heart and character which she has here afforded to her readers, show her to be a person of reflection, observation, and genius. The style is everywhere easy, often pleasing, and sometimes even eloquent. But the great charm is the air of reality and truth that pervades every page.

THE PATHWAY of the FAWN: a Tale of the New Year. By Mrs. T. K. HERVEY. Office of the National Illustrated Library, 227, Strand.

(SECOND NOTICE.)

A tale so gracefully written, and so elegantly produced as the present, even in these days of illustration, seldom appeals to our critical sympathies. Mrs. T. K. Hervey is already known to our readers by the delicacy of her fancy and the refinement of her style. Her vein of sentiment is delicious, and her diction is remarkable for its musical flow and poetic colour. The present work is, in kind and art, novel; associated with New Year superstitions, and illustrating the power of art to effect the regeneration of a selfish nature. The principal character, however, is a self-devoted heroine, who has assumed a boy's disguise, by the direction of her father, in order to secure an inheritance in his own family, which ought in part to have passed over to his sister's children. Bertha is the name of the boy-girl. Discovering the fraud, she leaves her father's house, and plots with her lover to bring the father round to a sense of the wrong he has committed. For this purpose certain pieces of sculpture are sent in to William Von Fern, the father, as the productions of a youth whom he had patronised, but now supposes dead. These operate upon him like a charm, until in the Beautiful he is made to see the Good. Moral agencies are, of course, brought in aid of the æsthetic, and both united prove irresistible. As the story is exceptionally written, our readers will be grateful for an example of the style:—

In the halls of Granbridge,—alone, before the Hebe,—fixed in an attitude of silent contemplation, stood William von Fern.

Was his eye dimmed with the radiance that streamed from the work of the sculptor's hand? or did the lifeless marble speak to his spirit of sweeter things than its own embodied beauty—youth and a sister's love?

He looked, and looked again; passed his hand across his eyes, as if doubting if some vision of the brain had not gathered form and substance from the cold stone before him, enduing it with the shape of her whom he had so cast out—his playmate of boyhood, Johanna!

Down the long gallery he paced with slow, musing steps;—then turned and looked again.

Still it was there—a very phantom of the heart; with such smiling lips as lead the ungrowing love, ne'er younger and ne'er older, which is nature's bond with those who have one pastime and one home.

She was the girl, and he once more the boy.

The flowing drapery and the half-raised foot! Thus had he seen her a thousand times chase the azure butterfly from flower to flower, trip along the bordered walks, or press the velvet turf.

In the arch meaning of that laughing lip he heard soft gibes re-echo; as when, a rude and clumsy boy, her lighter step pursued him with the snowy ball when winter had bound the brooks.

The lifted hand and pitcher! Thus stood she by her favourite rose, dropping sweet dew—Aurora's brighter self

Those flowing locks! How often had he seen them wafting airs from heaven across the cheek they pressed, light as the thistle-down upon the peach!—as, from the garden the gale, she followed far the bee, her eye on heaven, as his on her, too happy in that sweet sharer of his sport.

Where now had all this vanished?

Oh, cold, dull journeyer through the aching, anxious years!—oh, Mammon-ridden heart! are these things still so sweet?

In the sounds of the revel,—in the ringing of the gold, hast thou found thee better pastures?

Is the lighted hall a fitter temple for thy spirit, man of the changed heart than the arching sky that spanned ye both—beloved and loving children—in one wide embrace?

Is the goblet more precious than the golden king-cup your hands gathered with the dew?—Is she, wine sweter than the brook water?

Alas!

If but the phantom of her voice could reach him!—one word—a tone—a sigh

Alas!

The echo of his pacing foot alone filled all the chamber; there was no other sound.

As he gazed, the hovering twilight threw soft shadows across the marble brow; and, silently stealing with a step of stealth, like Time on beauty's face, the veiling of the darkness crept from cheek to lip. The eyelids seemed to droop,—the smiling grace to settle into thought.

Such a change he remembered well. He thought how, in old days, her childish calm had deepened into pensive beauty; how childhood's sports were all at once foregone, and youth's full heart made pastimes of its own: how for her a new world began to dawn—a new strange life to quicken; how day had its new troops, like which were not of the child's world; how night, instead of deep sleep, brought visions of a wakeful pillow, of toys that wearied less the limbs, but made the heart beat quicker.

Its use to begin—as of old!

Well—oh, how well!—he recalled the time when first the softening shadow fell!

They stood apart—not severed—the sister and the brother. A rich-toned voice was in the maiden's ear—a voice to childhood strange; singing, in young love's burthen old, sweet ditties of all time;—filling with music alien to that home each household hearth and haunt!

There wanted but the kindling blush to show him Matthius at her side.

Matthius!—his friend—his chosen heart-linked brother; his sister's love,—the promised bridegroom of her youth,—the husband of her heart!

With fretful tread his wrested foot beat impatiens on the floor. He paused and turned. He would not be so fooled he would gaze on it no more.

In spite of him, his eye wandered back. Half conscious only of the time and place—so strange were those buried memories with the things of now—he saw not busy feet that entered, nor busy hands that lighted up the hall.

Suddenly, the quivering lights fell on the statue's darkened face. Again the curved lip wreathed with smiles; again the vacant and orbless eye beamed with a new-lit fire.

Was the thing in motion? or had his brain grown dizzy with such thoughts?

The foot sprang from the pedestal, and led the joyous dance! He heard the viols play—the harp-notes rung! The boards beneath his tread bounded and fell with the bound of the springing feet! The plighted hands touched his, as they swept past him—the spot where he stood; and he caught sweet, smothered tones in the whirl of the flying danced!

There is a sudden hill. The phantom music stills;—the airy harp-notes die away. The dream-dance is closed, and the shadow-steps pass out.

There is a pause—a breathless pause. Sighs only fill the empty space;—tears and a shrouded face!

Shakspeare has evidently led the way in the suggestion of this beautiful idea. Here, in a softer and more domestic form, we have again *Leontes* and *Hermione*. We must, however, refer the fair reader (for this is a book, from its refinement, peculiarly suitable as a gift-book to ladies) to the volume itself. Its uncommon merits must command admiration; its beautiful sentiment will certainly engage the sympathies of the young, the kind, and the intelligent; and its almost faultless composition should claim the patronage of all who value good taste and really fine writing, without the slightest alloy of extravagance or affectation.

DAS TAUSCHEN (or, The Dove.) By CH. SCHMID. With an Introductory Grammar, and a Vocabulary containing every word occurring in the Text. By FALCK-LEBAHN

IN WHAT MANNER HENRY VON EICHENFELS CAME to the KNOWLEDGE of GOD. By CH. SCHMID. With a complete Vocabulary, and a Collection of Familiar Sentences and Dialogues. By FALCK-LEBAHN.

The author of "German in One Volume" has added two simple tales of the German Marmontel to the many elementary works by which he has facilitated the acquisition of the language to the English student. Of the simple beauty and morality of the tales it is unnecessary to speak. M. Lebahn has added to them vocabularies which leave no difficulties unexplained. The collection of short sentences from the dialogues in the second of the above tales is particularly valuable, as they embody idioms and expressions used in the conversation of every-day life—the first thing wanted, and very often the last thing acquired. They are a valuable guide and assistance to every beginner

FORSTER'S POCKET PEERAGE and BARONETAGE for 1852. Bogue.

The second issue of this already popular work has just appeared, with extensive alterations and emendations, the latter in very many instances communicated by the nobility themselves. All the best features of the larger Peerages are compressed with much that has a new interest in this economic volume, which has already become highly popular.

A LITERARY MELANGE, in Prose and Verse. By SYDNEY WHITING. New Edition. Ollivier.

This is a seasonable reprint of a very agreeable miscellany of *nouvelliettes*, sketches of humour, and graceful outpourings of sentimental verse, the latter remarkably good. The general tone of the writer is cheerful and benevolent; and, both in prose an i verse, there is considerable dramatic spirit. Of a more lively turn than the "Annual" vein, the *mélange* before us is a more appropriate gift-book for seasons of good wishes like the present.

SEARCHING FOR ARMS.

SECRET HISTORY OF THE LATE COUP D'ETAT IN FRANCE.

"A complete and authentic Account of the Events of Dec., 1851," has been published in Paris by one of the principal editors of the *Constitutionnel*, M. Granier de Cassagnac.

This most curious and interesting contribution to the history of the present time has been compiled from police reports and authentic documents, and will be read with great avidity in every country, notwithstanding that it is disfigured by a violent attack upon the now defunct Assembly, who can no longer defend itself, and by vile calumnies upon public men, who can obtain no redress now that a free and unshackled press no longer exists in France, and every attempt at independent writing or speaking is at once crushed by the janissaries of Louis Napoleon.

Passing by these base defects in this otherwise entertaining narrative, we commence with the fourth section.

It will be seen that many of the rumours which previously prevailed relative to the arrests of the Generals were unfounded.

In the middle of November (says M. de Cassagnac) the President yet remained master of his actions; in a few months it would have been too late for him and for everybody else. He resolved to "save the country." Three men were the confidants of his idea—General de St. Arnaud, Minister at War; M. de Morny, representative of the people; and M. de Maupas, Prefect of Police. Louis Napoleon exposed to them the designs which he had formed, and asked for their concurrence. They all three promised it to him—M. de Morny for all the responsibility to encounter as Minister of the Interior, M. de St. Arnaud for the military operations, M de Maupas for the action of the police

During more than fifteen days these three men planned with the President all the details of this immense act, an act which is not equalled by the 18th Brumaire, either in difficulty, ability, or greatness. The most minute things were foreseen, concerted, detailed, prepared, with such marvellous secrecy, that the friends most to be depended upon, the agents most necessary, had not a suspicion of what was to be done before the final moment for action arrived.

The simultaneousness of all the measures to be taken was evidently the first condition of success. The principal of these measures were four in number: the arrest of guilty or dangerous persons, the publication of the official proclamations, the occupation of the Palace of the National Assembly, and the distribution of troops upon all the points judged necessary. The hour of a quarter past six in the morning was fixed upon for the simultaneous execution of all these measures. It was necessary that the plan should not be divulged by anybody, or become known by piecemeal, but that it should burst forth at once in its entirety, and be at the same moment successful. At a quarter past six the arrests were effected; at half-past six the troops were at their posts; at seven the decree the dissolution and the proclamation were spread over the walls of Paris

At half-past six M. de Morny took possession of the Ministry of the Interior, accompanied by 250 of the Chasseurs de Vincennes, and remitted to M. de Thorigny a letter, in which the President thanked him for his services, and informed him of the steps which he had taken.

M. de Bevelle, the President's orderly officer, was instructed to superintend the printing of the proclamations, and the compositors had been kept at the national printing-office for a special service. At eleven o'clock the director of the printing-office was sent for, and at midnight the establishment was surrounded by gendarmes; sentries were immediately placed at every door and window, and then, and not till then, did M. de Bevelle produce the documents which had been confided to him, the printing of which he superintended himself, and remained until their impression was completed, and then carried them to the Prefecture of Police

The persons of whom the police were to render themselves masters were of two kinds—the representatives more or less mixed up with the absolute conspiracy, the chiefs of secret societies, and the commanders of barricades, always ready to execute the orders of the factions. Both had been for a fortnight under the surveillance of invisible agents of the police, and not one of those agents suspected the real object of his mission, having all received orders for imaginary purposes. The whole number of persons to be arrested was 78 of whom 18 were representatives, and 60 chiefs of secret societies and of barri-

ARREST OF GENERAL CAVAIGNAC.

cades. The 800 *sergens de ville* and the brigades of surety had been kept at the prefecture of police on the 1st of December until eleven o'clock at night, under a pretext of the presence in Paris of the refugees of London. At half-past three in the morning of the 2nd, the officers of peace and the 40 commissaries of police were convoked at their houses. At half-past four every one had arrived, and were placed in small groups in different apartments for the purpose of not exciting suspicion. At five o'clock all the commissaries went down separately into the office of the Prefect, and received from him a communication of the simple and entire truth with the necessary indications and orders. The men had been selected with special care for the duty to be confided to them, and all went away full of zeal and ardour, resolved to accomplish their duty at any price. Twelve failed in the general number of carriages, prepared in advance, were stationed in groups on the quays in the neighbourhood of the Prefecture of Police so as not to excite suspicion. The arrests had been so arranged between the Prefect of Police and the Minister of War that they should precede, by a quarter of an hour, the arrival of the troops on the places indicated. The arrests were to be made at a quarter-past six, and the agents were ordered to be at the doors of the persons to be arrested at five minutes past six. All was accomplished with surprising punctuality, and no arrest took more than 20 minutes.

The task of securing the person of General Changarnier was confided to two men selected for their rare energy, Captain Baudinot, of the Republican guard, and the commissary of police, Lerat. They took with them no less a force than 15 picked police agents, 30 Republican guards, and a picket of 10 cavalry. At five minutes past six they rang the bell at No. 3, Rue du Faubourg St. Honoré, where the General lived. The porter asked who was there, and, being told to open the door for some who wanted to speak to him, he became suspicious, and refused to do so. The commissary then marched into a grocer's shop next door, from which he rightly guessed there must be a communication with General Changarnier's apartment. In an imperious tone he demanded the key, which was instantly given to him. Followed by several of his people, he proceeded to the General's room, snatched the keys from his servant, whom he met upon the staircase, and rushed towards the General's bedroom. General Changarnier by this time knew the designs of the intruders. He appeared at the door of his bedroom in his shirt, with a pistol in each hand. The commissary said, "What are you going to do, General? We are not attempting your life; why should you defend it?" Changarnier then gave up his pistols, saying, "I am at your service; let me dress myself." He begged that his servant, with whom he could not dispense, might not be separated from him. This favour was granted. On his way to prison he said, "The President was sure of his election. He need not have had recourse to a *coup d'état*, he is giving himself much useless trouble." He afterwards added, "When the President shall have a foreign war, he will be glad to seek for me to give me the command of his army."

The arrest of General Cavaignac was neither long nor difficult. M. Collin, the commissary of police, having entered the house in which the General resided, No. 17, Rue du Helder, had the following conversation with the porter :—"In what part of the house does General Cavaignac live?" "He is not at home," said the porter. "I know that he is at home, and I must see him." "He is not—at any rate he is asleep—you come too early; his domestic, who is the only person called in the name of the law, for the door to be opened. The General replied, "I will not open it." The commissary said, "General, if you do not open the door, I will break it open." The General then opened it, and the commissary, having entered, said, "General, you are my prisoner; resistance would be useless, for all my measures are taken. I have orders to arrest you, in virtue of a warrant which I will read to you." The General would not hear the warrant read, but, becoming greatly exasperated, addressed the commissary in strong language. The General then looking at the commissary exclaimed, "What, you arrest me! What is your name?" The commissary replied, "I shall not conceal it, but this is not the time; you must come with me, and follow me." The General then became more calm, and said, "Well, sir, I am ready to follow you; all I ask is for time to dress myself. Let your attendants withdraw." He then asked permission to write, and this was granted. When the General was ready he said to the commissary, "Now let us set out; but I ask as a favour that I may proceed to my destination with you alone." The request was complied with. On their way the General appeared to be deep thought, and only spoke once, which was to ask if he alone had been arrested, and where he was going. The commissary said he could not reply to the first question, but he was going to the prison Mazas.

When the commissary of police Blanchet presented himself at the house inhabited by General de Lamoricière, Rue Las Cases, No. 11, the *concierge* refused to give a light or to indicate the apartment of the General. The commissary of police rang at the apartment on the first story; a domestic appeared, and sudden.y closed the door again. He thought better of it, and returned holding a lamp in his hand, and persisting in the answer previously given. He blew out the light, and fled by a secret staircase, crying out "Thieves!" He was arrested, by *sergens de ville*, and placed in the street before the hotel. He then became resigned, and guided the commissary to the chamber of his master. At first the General did not say a single word; then he cast his eye towards the chimney-piece, and asked his servant what had become of the money which he had laid there. The latter having answered that it was safe, the General called for his clothes and dressed himself. The commissary said to him, "Sir, the observation you have just made is offensive and painful to me." "How do I know," replied the General, "that you are not robbers?" At these words the commissary showed him his scarf. The General kept silence. The commissary said to him, "General, I have received from the Prefect of Police orders to treat you with all possible respect. It is, therefore, my wish to show to you all imaginable politeness, and if you give me your word of honour that you will not make any other escape, I will make it my duty to put you in a brougham where you will have only me for your guard." "I give you nothing, I answer for nothing; do with me what you will." He was then made to enter a hackney-coach with a policeman. In face of the post of the Legion of Honour the General put his head out of the window, and wanted to harangue the troops. The commissary did not give him time to utter a word. He was afraid that the troops would refuse to treat him with rigour if he made a fresh attempt. The General answered, "Do what you please." On his arrival at the prison Mazas, the General showed himself much calmer. He begged the commissary to take off his scarf, to dress, and to send him some cigars, with "The History of the French Revolution." The commissary complied with his request.

General Lefló, lodged at the Conciergerie, was in bed. The commissary Bertoglio awakened him, and notified his mission, showing the warrant for his arrest. He got up, dressed, while uttering menaces against the commissary and insults against the President. "Napoleon wants to make his *coup d'état*—we will shoot him at Vincennes. As for you, we won't send you to Nouka Hive, we will shoot you with him." The commissary said there was no resistance to make, that state of siege had been declared, and he ought to know the consequences. While getting into the carriage he apostrophised the Colonel of the 42d regiment of the line, and wanted to harangue the soldiers. Colonel Espinasse silenced him, and the soldiers presented their bayonets at him. From the Assembly to Mazas General Lefló did not utter a single word.

General Sedeau inhabited, in Rue de l'Université, No. 50, a large house with several staircases. The commissary Hubaut, jun., did not know which conducted to the apartment of the General, or on what floor his apartment was situated. It was necessary to deal adroitly with the *concierge*. The commissary entered alone. The *concierge* refused to indicate his lodging, and said, "I have never seen you with the General; in these times people must be careful, or we might are to be distrusted." He ended by yielding, and guided the commissary. The servant answered the door, which he partly opened. The commissary thrust it open and advanced. The servant fled, frightened. The commissary followed him, reached the General, and showed him his warrant. The General was in consternation. Soon, however, recovering from his surprise, he protested against it, exclaimed that it was a violation of the constitution, and called the commissary, "You have exceeded the law; you must not forget that I am a representative of the people—Vice-President of the Assembly. You cannot arrest me, since you do not find me in *flagrante delicto*." He then protested that he had not conspired, and demanded the name of the commissary. He said that he had seen him favourably spoken of in the journals, that it astonished him very much that he could arrest General Sedeau, the Vice-President of the Assembly—the soldier who had shed his blood for the cause of order—he who had carried out for his life, and who could, if he had so desired, have overthrown some parties. The commissary rep ied, that he had no comment to make on his warrant, but only to execute it; that if the General had any intention of stabbing him, he was resolved to sacrifice his in the accomplishment of his duty; that he must submit without violence, or otherwise he would be compelled to use force. He ordered the General to rise. The General dressed himself, decided slowness for the moment of setting out, the countenance of the General became sombre, and exhibited great anger. He leant against the chimney-piece, and said, "I won't go. I will only go if you take me as a criminal, unless you force me out." The commissary nevertheless say dare to take me by the collar—me, the Vice-President of the National Assembly." The commissary said to him, "Remember that I have conducted myself in every respect with courtesy towards you." "Yes, sir," said the General. The commissary then seized him. The General made the most determined resistance. He was carried to the carriage, crying, "Treason! To arms! I am the Vice-President of the Assembly, and they arrest me. All was in vain. The carriage set out, and the *sergens de ville* followed it. On his arrival at Mazas, he addressed the platoon of Republican guards, who were deaf to his words. At the entrance of the prison he met Generals Lefló, Changarnier, and Cavaignac, the latter of whom he embraced.

Colonel Charras, who lived Rue du Faubourg St. Honoré, No. 14, refused at first to open the door; but seeing the pistols begin to give way under the blows of the police, he cried out, "Stop, I am going to open it;" and he did so. The commissary Courtellis informed him of his errand. The Colonel said, "I had foreseen it; I expected it; I have not escaped, but I would not quit my post. I thought it would have been done two days ago, and in that expectation I had loaded my pistol, but I have discharged it." His at the same time pointed to a double-barrelled pistol on his dressing table. The commissary took possession of it. "If you had come on that day," said the Colonel, "I should have blown your brains out." He got into the carriage waiting for him without resistance. On the way he inquired where they were taking him to. Seeing that the commissary hesitated in answering, he said, "Are you taking me to be shot?" The commissary then said that he was taking him to Mazas. On arriving at the prison the Colonel became excited; he refused to give his description for the prison register otherwise than as a representative of the people, which he desired might be inserted.

Commissary Boudrot effected an entrance to the bedroom of the celebrated M. Charles Lagrange, Rue Casimir Perier, No. 27, at the moment when he was leaving his bed to inquire the meaning of the cries of terror uttered by his servant, who had just opened the door. M. Lagrange protested; he said they were violating the Constitution; that it would be enough for him to fire a pistol out of the window to rouse the people to arms, that if he wished to defend himself he could kill them; and that they should be put to use force to drag him from his home. A number of political papers were seized; also two pistols, a musket, two bullet-moulds, some cartridges, three poignards, and a cavalry sabre, numbered 478, and recognised by the Maréchal-des-logis, of the Republican Guard Kerkan, as having belonged to him, and having been stolen from his barracks on the 24th of February. On his way to Mazas M. Lagrange said several times, "It's a bold stroke, but it's well done."

M. Greppo, the ardent Socialist, had a whole arsenal under his pillow, at his lodgings, Rue de Pontieu, No. 15—an enormous bastinade (newly sharpened), two poignards, a loaded pistol, and a speech "à bonnet rouge," quite new. The arrival of commissary Grouper and his agents plunged M. Greppo into a state of complete prostration. Being questioned about the things found under his pillow, he said he had bought them because he had a taste for the sea. Mdme. Greppo, who is a woman of much energy, made use of the most animated expressions to her husband. "Is it possible," she said, "to have so little resolution, and to allow yourself to be arrested in this way without resistance?" But alas! neither these words nor the sight of the battleaxe could revive M. Greppo.

Perhaps some one may wish to know in what manner the arrest of M. Baze was effected. It was without any serious difficulty, although with struggles. M. Baze resisted *sanguine et rosire*, like one of those procrurers that Peironius calls *vultures togati*.

When the commissary of police Hubaut entered the bedchamber of M Thiers, in the Place St. Georges, M. Thiers was sound asleep. The commissary withdrew the curtains, woke M. Thiers, and signified to him his functions and warrant. M. Thiers sat up hastily, rubbed his eyes, and said, "On what account?" "I am come to make a search at your house; but do not be alarmed, no harm will be done you; your life is in no danger." This last assurance appeared necessary, for M. Thiers began in great indignation. "But what do you intend to do here? Do you know that I am a representative?" "Yes; but I cannot enter into any discussion on this point; I must execute my orders." "But what you do may bring you to the scaffold." "Nothing shall prevent the fulfilment of my duty." "But it is against the *coup d'état* that you are making." "I cannot enter into your observations; I pray you to get up." "Do you know if I am the only one in the same predicament—are any of my colleagues in the same case?" "I do not know, sir." M. Thiers then got up, dressed himself, refusing the services of the agents of the police. He all at once said to the commissary, "But, sir, suppose I should blow out your brains?" "I do not think you would be guilty of such an act, M. Thiers; but, in any case, I am armed, and I know how and I know how to prevent you." "But do you know the law? Do you know you violate the Constitution?" "It is not my business to enter into any discussion with you; and, besides, you are much better informed than I. I can only execute the orders which are given; and as I should have executed yours when you were Minister of the Interior." A search made in the chamber of M. Thiers did not lead to the discovery of any political correspondence. M. Thiers replied that he had his political correspondence addressed for some time in England, and that nothing would be found at his house. On being requested to descend and leave the house, M. Thiers was much affected, appeared alarmed, and was full of hesitation in his movements. He was led to believe that he was about to be conducted to the Prefect of Police. The direction taken by the carriage augmented his apprehensions, and he endeavoured to reason by every sort of sophism and subtle reasoning, to turn the agents of police from the accomplishment of their duties. On his arrival at the prison of Mazas, M. Thiers asked if he could have his coffee, as was his custom. Every attention was shown him. His courage, it must be confessed, entirely abandoned him in prison, and he did not show greater firmness than M. Greppo. Excused from being transferred to Ham, M. Thiers was provisionally taken back to his own house. By a new decision, M. Thiers was to be taken to the right bank of the Rhine to the bridge of Kell. The officer of peace Vindenbach went to take M. Thiers from his house on the 8th December, at six o'clock in the evening. M. Mignet and another friend accompanied M. Thiers to the Strasbourg railway station, and M. Granigier de la Mariniere accompanied him to Kell. At the moment of setting out, and for the first moments of his journey, M. Thiers wept abundantly. On his arrival at Kell, M. Granigier de la Mariniere carried to the officer of peace Vindenbach a letter of protestation and a letter of thanks for the attention shown to M. Thiers. M. Thiers announced his intention of going to Frankfort, and thence to Dresden, where he had to meet an old friend, with whom he should amuse himself in painting.

At the same time that the representatives were arrested in their beds, and without the least difficulty, the most dangerous chiefs of the secret societies and of the barricades were arrested. This kind of arrest has been pursued without intermission, and has already given the greatest results. The public scarcely know the names of these audacious and indefatigable enemies of society, and we shall only cite here those who are considered the most dangerous in the regions of Assets. They are:—Grignon (Henri-Gustave), Stevonot, Michel, Artaud (Denis-Claude), Genillier (Guillaume), Phillippe (Alphonse), Bregnet (Armand), Delpech (Célestin), Gabriel (Nicolas-François), Sconcin (Jacques Frédéric), Bonnet (frère du représentant) Vasbenter, Houi (Michel-Abraham), Cellier (Charles), Jacotier (Louis-François), Huch (Marie-Alphonse), Six (Théodore), Brun (François), Lemesle Maligny (Pierre-Adolphe-Aimé), Lecomte (Mosnier (Meunier (Arsène), Bulason (Alexandre), Musaot (Pierre), Benvallet (Théodore-Jacques), Choquin (Etienne-Simon Nicolas), Guiterie (Charles), Billotte (Léonard), Voimer (Aimé), Pernolle, Bonnard, Bernard, Cramer, Beck, and Co. "A Patriot never dies," and "When thou art happy think of me," by C. W. Glover: Addison and Hollier.

Mr. Blewett's aria buffo, in the Rossini school, is exhilarating: the composer has a peculiar tact for the comic class of composition. The "Welcome" to the Hungarian patriot has three verses, and a refrain for the chorus, thus:—

> We meet him here, we greet him here,
> With Love's wide arms caress him;
> And Kings have much welcome dear
> As Kossuth hath: God bless him!

The Rev. H. Formby's work is a collection of sixty lively and entertaining songs, and fables in verse, selected and adapted to popular melodies, with a facile pianoforte accompaniment. The editor has been indebted to Mr. Chappell's collection of English national airs, and to Mr. C. J Read, of Salisbury, for the arrangement of the pianoforte accompaniments. The words of many songs are by the Rev. Mr. Formby, the Rev. E. Caswall, and Mrs. Howitt, and the book has been neatly got up. Mr. J. L. Hatton's setting to music the glorious poetry of Herrick, Ben Jonson, and Sedley has been in a hundred spirit. These airs are the inspiration of an ordinary musician—they are not the ephemeral works of the day, written to order, but breathe the most poetic and melodious imagery—and are arranged with masterly accompaniments. The ballad-style of Nelson and Barker is well known. Mr. Bond is an organist, at Brighton, who has an artistic feeling for the works of the great masters. Mr. Murphy, jun., M.B., appears to be an aspirant for the Charles Lover school of composition. Mrs. Sterling's vocal duet, "The Minstrel to his Harp," the words by Mrs. Hemans, is nicely harmonised. "Ethlen's prayer," the words by J. H. Jewell, was the best composition of the late Alexander Lee, and is full of plaintive feeling. The set of six songs of France, the words arranged and imitated in English by Mr. H. F. Chorley, will fully maintain the rising reputation of M. Charles Gounod. Miss Crosby at her zenith has produced the "May Day" and "O my proud one;" in grandeur the "Venice" is very remarkable. The hunting song is replete with animation. The English words have the original French poetry underneath, so that the singer can have the option of singing in both languages at pleasure. Mr. Charles Glover is an easy and graceful melodist, whose compositions are very familiar and popular. The "Patriot never dies" is starring; and the ballad, "When thou art happy think of me," of the sentimental school, is elegant in conception and treatment.

DANCE MUSIC.

THE BLOOMER QUADRILLES, WALTZES, AND SCHOTTISCHE. By J. J. Blockley. Addison and Co. "The Queen and Prince Albert's Welcome to Lancashire." By J. Blewett. Rainford, and Co., London; and Andrews, Manchester. "Your Polka." By M. De Merey. Wessel and Co. "The Grand Exhibition Valse à Cinq Temps." By John Old. Addison and Co. "The Anemone Polka." By Mrs. Hart. Jewell and Letchford. "Cleopatra's Polka." By T. Rolt. Cocks and Co. "The May Polka." Jewell and Letchford.

Mr. Blockley's dance compositions display in each set a blooming illustration of the American costume, lately agitating the metropolis. Mr. Blewett's grand national polka opens with a movement descriptive of the Royal entrance into Lancashire, with ringing of bells, and is followed by the polka, which merits its name of national, as the anthem is interwoven in two-four time. The polka is clever and characteristic. M. de Merey, the Hungarian refugee, has composed a pretty polka. The five-four time waltz is more ingenious than comfortable; this is approximating to the witticism of Liszt, who, in reference to the attempts at mixed times, composed a piece marked "Without time, without measure." The "Anemone, or Wind Flower," the "Polka of Cleopatra," and the "May Polka," are of the average class in dance compositions.

Christian congregations to join in the musical praises of God, has been the praiseworthy object of the compiler: the collection is arranged for four voices, and adapted for the organ or pianoforte. The arrangement is simple and intelligible, and the notation clear and legible—the key of many of the tunes being lowered to suit the pitch agreeable to the generality of voices. Mr. Forbes' work is a very praiseworthy essay to improve parochial psalmody.

SONGS OF ZION. By F. H. HENSLOWE, Hobart Town.——GOD IS GONE UP WITH A MERRY NOISE. By DR. CROFT. Lonsdale.——THE SONGS OF THE SOUL. By DR. GAUNTLETT. D'Almaine.

Francis Hartwell Henslowe, of Hobart Town, is the composer of the Songs of Zion, the words taken from the Scriptures by James Montgomery. There is a truly devotional feeling pervading these sacred melodies. Dr. Gauntlett's new accompaniment to Dr. Croft's well-known anthem is well identified with the character of the composition. The words of the "Songs of the Soul" are by Alaric Watts, Wordsworth, Coleridge, Hemans, Longfellow, Tennyson, &c. Dr. Gauntlett has shown his thorough artistic attainments in these songs, with no small amount of inspiration.

PIANOFORTE PIECES.

THE VISION.—THE ANGEL'S SONG.—RECOLLECTIONS OF WALES, NOS. 1, 2, and 3.—COMPOSITIONS for the PIANOFORTE. By BRINLEY RICHARDS. R. Cocks and Co.

The above works are eminently calculated to raise the rising reputation of Mr. Brinley Richards. There is evidence of a stronger individuality in the style than we have met in his former compositions in the "Vision" and "Angel's Song;" the former is based on Longfellow's words, "The dreams of youth came back again," and the latter on the lines of the same poet:

> Ye sounds so low and calm
> That in the groves of Dreams
> Seem'd to me like an angel's psalm.

Mr. Richards has treated his two themes with kindred poetic feeling, and the development of the ideas is replete with fancy and elegance. The new arrangements of his native melodies, with the variations, are clever and effective: the present series contain "Poor Mary Ann," "The Ash Grove," and "The Rising of the Lark." The tendency of the musical public, and a very healthy sign it is, has been lately to accept with more readiness the compositions of English writers. The monopoly hitherto enjoyed by the foreign composers in our pianoforte music must will be more endangered by such charming productions as the "Vision" than by empty diatribes against the continental invader. This movement will, of course, derive strong aid from the tolerance and liberality of our fair amateurs of the drawingrooms, who must not exhibit such a marked preference for foreign names, which in many instances are a mere passport for mediocrity.

ANDANTE and VARIATIONS. By Miss S. J. WOOLF. Wessel and Co.

Miss Sophia Woolf's first composition for the pianoforte is an andante on a theme from "Lucrezia Borgia," with brilliant variations: the introduction displays fancy; and the young and clever pianiste, who is King's scholar in the Royal Academy of Music, has taxed the powers of ordinary players severely in the executive passages.

THE BIRTHDAY MARCH. By J. T. COOPER. Cramer, Beale, and Co. FAREWELL to the EXHIBITION. By Herr SOMMER. Jewell and Letchford.

Mr. Cooper has written the March as a duet for young beginners, and it is fingered for their guidance; it is an agreeable task piece. The pianoforte adaptation of Ferdinand Sommer is a pretty theme, followed by some lively variations. Herr Sommer performed the air on the sommerophone before her Majesty, Prince Albert, and the Royal Family, on the 14th of October last.

VOCAL COMPOSITIONS.

THE LITTLE BARRISTER. By J. Blewett. R. Addison and Co. "Welcome to Kossuth." By C. H. S. Marriott. Williams and Co. "The Young Singer's Book of Songs." By the Rev. H. Formby. Longman, Green and Co. No. 1. Songs and other Poems, by Merrick, &c.: J. H. Hatton. "The Home Song," and "My Dream," by S. Nelson: Williams and Co. "The Emigrant's Child," by G. Barker: E. Williams. "Land and Sea," by E. Bond: Cramer, Beale, and Co. "They won't let me out," by W. Murphy, jun.: Case. "Ellen's Prayer," by A. Lee: Jewell and Letchford. "The Minstrel to his Harp," by E. Sterling: C. Jeffrys. "The Songs of France," by Charles Gounod. Nos. 1 to 6. Cramer, Beale, and Co. "A Patriot never dies," and "When thou art happy think of me," by C. W. Glover: Addison and Hollier.

Mr. Blewett's aria buffo, in the Rossini school, is exhilarating: the composer has a peculiar tact for the comic class of composition. The "Welcome" to the Hungarian patriot has three verses, and a refrain for the chorus, thus:—

> We meet him here, we greet him here,
> With Love's wide arms caress him;
> And Kings have much welcome dear
> As Kossuth hath: God bless him!

The Rev. H. Formby's work is a collection of sixty lively and entertaining songs, and fables in verse, selected and adapted to popular melodies, with a facile pianoforte accompaniment. The editor has been indebted to Mr. Chappell's collection of English national airs, and to Mr. C. J Read, of Salisbury, for the arrangement of the pianoforte accompaniments. The words of many songs are by the Rev. Mr. Formby, the Rev. E. Caswall, and Mrs. Howitt, and the book has been neatly got up. Mr. J. L. Hatton's setting to music the glorious poetry of Herrick, Ben Jonson, and Sedley has been in a hundred spirit. These airs are the inspiration of an ordinary musician—they are not the ephemeral works of the day, written to order, but breathe the most poetic and melodious imagery—and are arranged with masterly accompaniments. The ballad-style of Nelson and Barker is well known. Mr. Bond is an organist, at Brighton, who has an artistic feeling for the works of the great masters. Mr. Murphy, jun., M.B., appears to be an aspirant for the Charles Lover school of composition. Mrs. Sterling's vocal duet, "The Minstrel to his Harp," the words by Mrs. Hemans, is nicely harmonised. "Ethlen's prayer," the words by J. H. Jewell, was the best composition of the late Alexander Lee, and is full of plaintive feeling. The set of six songs of France, the words arranged and imitated in English by Mr. H. F. Chorley, will fully maintain the rising reputation of M. Charles Gounod. Miss Crosby at her zenith has produced the "May Day" and "O my proud one;" in grandeur the "Venice" is very remarkable. The hunting song is replete with animation. The English words have the original French poetry underneath, so that the singer can have the option of singing in both languages at pleasure. Mr. Charles Glover is an easy and graceful melodist, whose compositions are very familiar and popular. The "Patriot never dies" is starring; and the ballad, "When thou art happy think of me," of the sentimental school, is elegant in conception and treatment.

DANCE MUSIC.

THE BLOOMER QUADRILLES, WALTZES, AND SCHOTTISCHE. By J. J. Blockley. Addison and Co. "The Queen and Prince Albert's Welcome to Lancashire." By J. Blewett. Rainford, and Co., London; and Andrews, Manchester. "Your Polka." By M. De Merey. Wessel and Co. "The Grand Exhibition Valse à Cinq Temps." By John Old. Addison and Co. "The Anemone Polka." By Mrs. Hart. Jewell and Letchford. "Cleopatra's Polka." By T. Rolt. Cocks and Co. "The May Polka." Jewell and Letchford.

Mr. Blockley's dance compositions display in each set a blooming illustration of the American costume, lately agitating the metropolis. Mr. Blewett's grand national polka opens with a movement descriptive of the Royal entrance into Lancashire, with ringing of bells, and is followed by the polka, which merits its name of national, as the anthem is interwoven in two-four time. The polka is clever and characteristic. M. de Merey, the Hungarian refugee, has composed a pretty polka. The five-four time waltz is more ingenious than comfortable; this is approximating to the witticism of Liszt, who, in reference to the attempts at mixed times, composed a piece marked "Without time, without measure." The "Anemone, or Wind Flower," the "Polka of Cleopatra," and the "May Polka," are of the average class in dance compositions.

MUSICAL REVIEW

MENDELSSOHN'S OPERETTA, "SON AND STRANGER." Ewer and Co.

We have in our notices of the performance of Mendelssohn's only published opera, at the Haymarket Theatre, specially referred to the charming music in the "Son and Stranger." The English text has been adapted from the German of M. C. Klingemann, Mendelssohn's dearest friend, by Mr. Chorley, with tact and taste. Every piece is now familiar to the public, and it will be a long time, perhaps, before such a fresh and captivating romance as that of *Ursula*, "There sat in the gray, gray times of old," will be met with.

SACRED MUSIC.

SACRED HARMONY. Edited by HENRY JOHN HAYCRAFT. R. Addison and Co.

The compiler of this volume of psalms, chants, responses, anthems, songs, fugues, &c., has supplied an interesting addition to the list of sacred musical works. The profits of this work are to be appropriated to the medical charities in Bristol. The volume consists chiefly of compositions produced entirely in MS. for the compilation; amongst the contributors are W. S. Bennett, Henry Smart, Henry Leslie, W. Sewell, Goss, Miss Kate Loder, J. Aspinwall, Brinley Richards, Lucas, T. A. Walmsley, W. L. Phillips, R. Barrett, Goodban, O. May, H. J. Haycraft, &c.

COMPANION to the PSALM and HYMN BOOK By GEORGE FORBES. Wright.

Mr. Forbes has successfully endeavoured to combine cheapness with elegance in this little volume—smallness of size with quantity of matter, almost every recognised metre being included. To aid persons in
